

## I/O-modules

for PCD1 / PCD2 series  
and for PCD3 series

**0 Content**

0.1	Document versions .....	0-4
0.3	Brands and trademarks .....	0-4

**5 Input/output (I/O) modules for PCD1 and PCD2**

5.1	General informations .....	5-1
5.1.1	Overview .....	5-1
5.1.2	Outphased I/O-modules PCD2 .....	5-6
5.1.3	Power consumption of PCD2 input/output modules .....	5-8
5.1.4	Maximal current consumption from base units .....	5-8
5.2	Digital input modules .....	5-9
5.2.1	PCD2.E11x, 8 digital inputs .....	5-10
5.2.2	PCD2.E160/161, 16 digital inputs, ribbon cable connector .....	5-13
5.2.3	PCD2.E165/166, 16 digital inputs, spring terminal connectors .....	5-16
5.3	Digital input modules, electrically isolated .....	5-18
5.3.1	PCD2.E500, 6 digital inputs for 115 - 230 VAC .....	5-19
5.3.2	PCD2.E61x, 8 digital inputs, electrically isolated .....	5-21
5.4	Digital output modules .....	5-23
5.4.1	PCD2.A300, 6 digital outputs for 2 A each .....	5-24
5.4.2	PCD2.A400, 8 digital outputs for 0.5 A each .....	5-26
5.4.3	PCD2.A460, 16 digital outputs for 0.5 A each, with ribbon connector ...	5-28
5.4.4	PCD2.A465, 16 digital outputs, for 0.5 A each .....	5-31
5.5	Digital output modules, electrically isolated .....	5-33
5.5.1	PCD2.A200, 4 relays with make contacts, with contact protection .....	5-34
5.5.2	PCD2.A210, 4 relays with break contacts, with contact protection .....	5-36
5.5.3	PCD2.A220, 6 relays with make contacts, without contact protection ..	5-38
5.5.4	PCD2.A250, 8 relays with make contacts, without contact protection ..	5-40
5.5.5	PCD2.A410, 8 digital outputs for 0.5 A each, electrically isolated .....	5-42
5.6	Digital combined input and output modules .....	5-44
5.6.1	PCD2.B100, 2 inputs + 2 outputs + 4 digital inputs/outputs (selectable) .....	5-45
5.7	Multi-functional input/output modules .....	5-48
5.7.1	PCD2.G400, multi-functional input/output module .....	5-49
5.7.2	PCD2.G410, multi-functional I/O module with elect. isolated digital I/O .....	5-50
5.8	Analogue input modules .....	5-52
5.8.1	PCD2.W10x, analogue inputs, 4 channels, 12 bit resolution .....	5-53
5.8.2	PCD2.W11x, analogue inputs, 4 channels, 12 bit resolution .....	5-56
5.8.3	PCD2.W2x0, analogue inputs, 8 channels, 10 bit resolution .....	5-61
5.8.4	PCD2.W3x0, analogue inputs, 8 channels, 12 bit resolution .....	5-67
5.9	Analogue input modules with electrically isolation .....	5-73
5.9.1	PCD2.W3x5, analogue inputs, 7 channels, 12 bit resolution, electrical isolated .....	5-74
5.10	Analogue output modules .....	5-78
5.10.1	PCD2.W4x0, analogue outputs, 4 channels, 8 bit resolution .....	5-79
5.10.2	PCD2.W6x0, analogue outputs, 4 channels, 12 bit resolution .....	5-83
5.11	Analogue output modules with electrically isolation .....	5-87
5.11.1	PCD2.W6x5, analogue outputs, 6 (4) channels, 10 bit resolution, electrical isolated .....	5-88
5.12	Analogue input and output modules .....	5-92

5.12.1	PCD2.W5x0, analogue inputs/outputs, 2 + 2 channels, 12 bit resolution .....	5-93
5.13	Combined analogue input/output modules with galvanic isolation .....	5-97
5.13.1	PCD2.W525 Combined analogue input/output modules with galvanic isolation .....	5-98
5.14	Analogue weighing modules .....	5-106
5.15	Analogue thermocouple modules .....	5-107
5.16	Fast counting modules .....	5-108
5.16.1	PCD2.H100, counting module up to 20 kHz .....	5-109
5.16.2	PCD2.H110, general purpose counting / measuring module up to 100 kHz .....	5-114
5.17	SSI interface modules .....	5-116
5.17.1	PCD2.H150, SSI interface module for absolute encoder .....	5-117
5.18	Motion control modules for stepper motors .....	5-120
5.18.1	PCD2.H210, Motion control module for stepper motors .....	5-121
5.19	Motion control modules for servo-motors .....	5-124
5.19.1	PCD2.H31x, motion control module for servo-motors, 1-axis encoder ..	5-125
5.19.2	PCD2.H32x, motion control modules for servo-drives .....	5-129

## 6 Input/output (I/O) modules for PCD3

6.1	Introduction to I/O modules .....	6-1
6.1.1	Connector types .....	6-4
6.1.2	Current consumption of the modules .....	6-5
6.1.3	External input voltage .....	6-6
6.1.4	Example I/O modules .....	6-7
6.1.5	Open the module housing .....	6-7
6.1.6	Outphased I/O-modules PCD2 .....	6-8
6.2	Digital input modules .....	6-10
6.2.1	PCD3.E110/111/112/116, 8 digital inputs .....	6-11
6.2.2	PCD3.E160/161, 16 digital inputs, ribbon cable connector .....	6-13
6.2.3	PCD3.E165/166, 16 digital inputs, cage clamp terminal connectors ....	6-15
6.3	Digital input modules, electrically isolated from the I/O Bus .....	6-17
6.3.1	PCD3.E500, 6 digital inputs, electrically isolated from the I/O Bus .....	6-18
6.3.2	PCD3.E610/613, 8 digital inputs, electrically isolated from the I/O Bus	6-20
6.4	Digital output modules .....	6-22
6.4.1	PCD3.A300, 6 digital outputs for 2 A each .....	6-23
6.4.2	PCD3.A400, 8 digital outputs for 0.5 A each .....	6-25
6.4.3	PCD3.A460, 16 digital outputs for 0.5 A each, with ribbon cable connector .....	6-27
6.4.4	PCD3.A465, 16 digital outputs for 0.5 A each .....	6-29
6.5	Digital output modules, electrically isolated .....	6-31
6.5.1	PCD3.A200, 4 relays with make contacts, with contact protection .....	6-32
6.5.2	PCD3.A210, 4 relays with break contacts, with contact protection .....	6-34
6.5.3	PCD3.A220, 6 relays with make contacts, without contact protection ..	6-36
6.5.4	PCD3.A251, 8 relays, 6 with changeover contacts, 2 with make contacts .....	6-38
6.5.5	PCD3.A410, 8 digital outputs for 0.5 A each, electrically isolated .....	6-40

6.6	Digital output modules for manual operation, electrically isolated .....	6-42
6.6.1	PCD3.A810, Digital manual control module with 4 relays, 2 with changeover, 2 with make contacts .....	6-43
6.6.2	PCD3.A860, digital light and shade module, with 2 make contacts .....	6-47
6.7	Digital combined input/output modules .....	6-53
6.7.1	PCD3.B100, combined with 2 inputs + 4 digital I/Os .....	6-54
6.8	Analogue input modules .....	6-57
6.8.1	PCD3.W2x0, analogue inputs, 8 channels, 10 bit resolution .....	6-58
6.8.2	PCD3.W3x0, analogue inputs, 8 channels, 12 bit resolution .....	6-64
6.9	Analogue input modules, electrically isolated from the I/O Bus .....	6-72
6.9.1	PCD3.W3x5, analogue inputs electrically isolated from the I/O Bus, 7 channels, 12 Bit resolution .....	6-73
6.10	Analogue output modules .....	6-77
6.10.1	PCD3.W4x0, analogue outputs, 4 channels, 8 bit resolution .....	6-78
6.10.2	PCD3.W6x0, analogue outputs, 4 channels, 12 bit resolution .....	6-82
6.11	Analogue output modules, electrically isolated from the I/O Bus .....	6-87
6.11.1	PCD3.W6x5, analogue outputs electrically isolated from the I/O Bus, 6(4) channels, 10 Bit resolution .....	6-88
6.12	Analogue combined input/output modules .....	6-92
6.12.1	PCD3.W500, analogue inputs/outputs, 2 + 2 channels, 12 bit resolution .....	6-93
6.13	Analogue combined input/output modules, electrically isolated .....	6-97
6.13.1	PCD3.W525 analogue combined input/output module with electrical isolation .....	6-98
6.14	Analogue manual control modules .....	6-103
6.14.1	PCD3.W800, Analogue manual control module with 4 output channels, 0...+10 V, 10 bit resolution .....	6-104
6.15	Weighing modules .....	6-108
6.15.1	PCD3.W720 .....	6-108
6.16	General-purpose temperature modules .....	6-109
6.16.1	PCD3.W745 .....	6-109
6.17	Counting and motion control I/O modules .....	6-110
6.17.1	PCD3.H100, counting module up to 20 kHz .....	6-111
6.17.2	PCD3.H110, counting module up to 100 kHz .....	6-116
6.17.3	PCD3.H150, SSI interface module for absolute encoder .....	6-118
6.17.4	PCD3.H210, Motion control module for stepper motors .....	6-121
6.17.5	PCD3.H31x, motion control module for servo-motors, 1-axis encoder .....	6-124
6.18	Miscellaneous modules .....	6-128
6.18.1	PCD3.S100 Workshop simulator unit .....	6-129

## A Appendix

A.1	Icons .....	A-1
A.4	Installation direction and relays contact protection .....	A-2
A.4.1	Installation direction for switching low voltages .....	A-2
A.4.2	Installation direction for switching higher voltages .....	A-2
A.4.3	Switching inductive loads .....	A-4
A.4.4	Relay manufacturer's information on RC unit dimensioning .....	A-4
A.6	Contact .....	A-6

## 0.1 Document versions

0

Version	Changes	Published	Remarks
EN01	2014-07-28	2014-07-30	New document content from manual 26/737 PCD1 PCD2
EN02	2014-08-06	2014-08-06	Content from 26/789 PCD3 added
EN03	2014-09-19	2014-09-19	Better names for the chapters

## 0.3 Brands and trademarks

Saia PCD® and Saia PG5®  
are registered trademarks of Saia-Burgess Controls AG.

Technical modifications are based on the current state-of-the-art technology.

## 5 Input/output (I/O) modules for PCD1 and PCD2

### 5.1 General informations

#### 5.1.1 Overview

The summary below shows the available digital and analogue I/O modules, counters etc. for the PCD2 series:

Type	Designation	No. I/Os or mod	Description	Input/output signal range	Page
------	-------------	-----------------	-------------	---------------------------	------

#### PCD2 digital input modules

PCD2.E110	8 I	8	8 inputs 8 ms	24 V <sub>DC</sub>	5-9
PCD2.E111	8 I	8	8 inputs 0.2 ms	24 V <sub>DC</sub>	5-9
PCD2.E112	8 I	8	8 inputs 9 ms	12 V <sub>DC</sub>	5-9
PCD2.E116	8 I	8	8 inputs 0.2 ms	5 V <sub>DC</sub>	5-9
PCD2.E160	16 I	16	16 inputs 8 ms, connection via 34-pole ribbon connector	24 V <sub>DC</sub>	5-11
PCD2.E161	16 I	16	16 inputs 0.2 ms, connection via 34-pole ribbon connector	24 V <sub>DC</sub>	5-11
PCD2.E165	16 I	16	16 inputs 8 ms, spring terminal connection	24 V <sub>DC</sub>	5-14
PCD2.E166	16 I	16	16 inputs 0.2 ms, spring terminal connection	24 V <sub>DC</sub>	5-14

#### PCD2 digital input modules, electrically isolated <sup>1)</sup>

PCD2.E500	6 I	6	6 inputs	100...240 V <sub>AC</sub>	5-17
PCD2.E610	8 I	8	8 inputs 10 ms, electrically isolated	24 V <sub>DC</sub>	5-19
PCD2.E611	8 I	8	8 inputs 0.2 ms, electrically isolated	24 V <sub>DC</sub>	5-19
PCD2.E613	8 I	8	8 inputs 9 ms, electrically isolated	48 V <sub>DC</sub>	5-19
PCD2.E616	8 I	8	8 inputs 0.2 ms, electrically isolated	5 V <sub>DC</sub>	5-19

#### PCD2 digital output modules

PCD2.A300	6 O	6	6 outputs 2 A	10...32 V <sub>DC</sub>	5-22
PCD2.A400	8 O	8	8 outputs 0.5 A	5...32 V <sub>DC</sub>	5-24
PCD2.A460	8 O	8	8 outputs 0.5 A, electrically isolated	10...32 V <sub>DC</sub>	5-26
PCD2.A465	16 O	16	16 outputs 0.5 A, spring terminal connection	10...32 V <sub>DC</sub>	5-29

- 1) galvanic separation of outputs to Saia PCD®, the channels themselves are not separated against each other

Type	Designation	No. I/Os or mod	Description	Input/output signal range	Page
------	-------------	-----------------	-------------	---------------------------	------

**PCD2 digital output modules, electrically isolated**

PCD2.A200	4 O	4	4 make contacts 2 A	250 V <sub>AC</sub> 50 V <sub>DC</sub>	5-32
PCD2.A210	4 O	4	4 break contacts 2 A	250 V <sub>AC</sub> 50 V <sub>DC</sub>	5-34
PCD2.A220	6 O	6	6 make contacts 2 A	250 V <sub>AC</sub> 50 V <sub>DC</sub>	5-36
PCD2.A250	8 O	8	8 make contacts 2 A	48 V <sub>AC</sub> 50 V <sub>DC</sub>	5-38
PCD2.A410	8 O	8	8 outputs 0.5 A, electrically isolated <sup>1)</sup>	5 ... 32 V <sub>DC</sub>	5-40

**PCD2 digital, combined I/O modules**

PCD2.B100	2I + 2O + 4I/O	8	2 inputs, 2 outputs, 4 selectable as inputs or outputs	24 V <sub>DC</sub> 5 ... 32 V <sub>DC</sub> 24 V <sub>DC</sub>	5-43
-----------	----------------------	---	--	--	------

**PCD2 multi-functional I/O modules**

PCD2.G400			10 digital inputs 2 analogue inputs 10 bit 6 analogue inputs 10 bit 8 digital outputs 6 analogue outputs 8 bit	24 V <sub>DC</sub> 0 ... 10 V Pt/Ni 1000 24 V <sub>DC</sub> 0 ... 10 V <sub>DC</sub>	5-47
PCD2.G410			16 digital inputs 4 analogue inputs 10 bit 4 relay outputs 4 analogue outputs 8 bit	24 V <sub>DC</sub> I/U/T 250 V <sub>AC</sub> U/I	5-48

- 1) galvanic separation of outputs to Saia PCD<sup>®</sup>, the channels themselves are not separated against each other

Type	Designation	No. I/Os or mod	Description	Input/output signal range	Page
------	-------------	-----------------	-------------	---------------------------	------

**PCD2 analogue input modules**

PCD2.W100	4 I	4	Analogue inputs 12 bit	0 ... 10 V, -10 ... +10 V	5-51
PCD2.W105	4 I	4	Analogue inputs 12 bit	0 ... +20 mA -20 ... 0 mA -20 ... +20 mA	5-51
PCD2.W110	4 I	4	Analogue inputs 12 bit	Pt 100	5-54
PCD2.W111	4 I	4	Analogue inputs 12 bit	Ni 100	5-54
PCD2.W112	4 I	4	Analogue inputs 12 bit	Pt 1000	5-54
PCD2.W113	4 I	4	Analogue inputs 12 bit	Ni 1000	5-54
PCD2.W114	4 I	4	Analogue inputs 12 bit	Pt 100	5-54
PCD2.W200	8 I	8	8 analogue inputs 10 bit	0 ... 10 V	5-59
PCD2.W210	8 I	8	8 analogue inputs 10 bit	0 ... 20 mA	5-59
PCD2.W220	8 I	8	8 analogue inputs 10 bit	Pt/Ni 1000	5-59
PCD2.W220Z02	8 I	8	8 analogue inputs 10 bit	NTC 10	5-59
PCD2.W220Z12	8 I	8	8 analogue inputs 10 bit	4×0 ... 10 V 4×Pt/Ni 1000	5-59
PCD2.W300	8 I	8	8 analogue inputs 12 bit	0 ... 10 V	5-64
PCD2.W310	8 I	8	8 analogue inputs 12 bit	0 ... 20 mA	5-64
PCD2.W340	8 I	8	8 analogue inputs 12 bit, jumper selectable	0 ... 10 V, 0 ... 2,5 V 0 ... 20 mA, Pt/Ni 1000	5-64
PCD2.W350	8 I	8	8 analogue inputs 12 bit	Pt/Ni 100	5-64
PCD2.W360	8 I	8	8 analogue inputs 12 bit, resolution < 0.1 °C	Pt 1000	5-64

**PCD2 analogue input modules, electrically isolated <sup>1)</sup>**

PCD2.W305	7 I	7	7 analogue inputs 12 bit	0 ... 10 V	5-70
PCD2.W315	7 I	7	7 analogue inputs 12 bit	0 ... 20 mA	5-70
PCD2.W325	7 I	7	7 analogue inputs 12 bit	-10 ... +10 V	5-70

**PCD2 analogue output modules**

PCD2.W400	4 O	4	4 analogue outputs 8 bit	0 ... 10 V	5-87
PCD2.W410	4 O	4	4 analogue outputs 8 bit, jumper selectable	0 ... 10 V, 0 ... 20 mA, 4 ... 20 mA	5-87
PCD2.W600	4 O	4	4 analogue outputs 12 bit	0 ... 10 V	5-91
PCD2.W610	4 O	4	4 analogue outputs 12 bit, jumper selectable	0 ... 10 V, -10 V...+10 V 0 ... 20 mA, 4 ... 20 mA	5-91

- 1) galvanic separation of outputs to Saia PCD®, the channels themselves are not separated against each other

Type	Designation	No. I/Os or mod	Description	Input/output signal range	Page
------	-------------	-----------------	-------------	---------------------------	------

**PCD2 analogue output modules, electrically isolated <sup>1)</sup>**

PCD2.W605	6 O	6	6 analogue outputs 10 bit	0 ... 10 V	5-96
PCD2.W615	4 O	4	4 analogue outputs 10 bit	0 ... 20 mA	5-96
PCD2.W615	6 O	6	6 analogue outputs 10 bit	-10 ... +10 V	5-96

**PCD2 analogue combined input/output modules**

PCD2.W500	2I + 2O	4	2 analogue inputs 12 bit + 2 analogue outputs 12 bit	0 ... 10 V, -10 ... +10 V	5-76
PCD2.W510	2I + 2O	4	2 analogue inputs 12 bit + 2 analogue outputs 12 bit	0 ... +20 mA -20 ... +20 mA	5-76

**PCD2 analogue combined input/output modules, electrically isolated <sup>1)</sup>**

PCD2.W525	4 E  + 2 A	4	4 analogue inputs 14 bit  + 2 analogue outputs 12 bit	0 ... 10 V, 0(4) ... 20 mA Pt500/1000, Ni 1000 0 ... 10 V, 0(4) ... 20 mA	5-81
-----------	------------------	---	---	--	------

**PCD2 weighing modules**

PCD2.W710	1 I	1	1-channel weighing module for 4/6-wire weighing cells		5-100
PCD2.W720	2 I	2	2-channel weighing module for 4/6-wire weighing cells		5-100

**PCD2 thermocouple modules**

PCD2.W745	4 I	4	Thermocouple module for J, K... thermocouples <sup>2)</sup>	6-98	5-101
-----------	-----	---	---	------	-------

1) Galvanic separation of outputs to Saia PCD®, channels themselves not separated

2) Non-pluggable cage clamp terminals

**PCCD2 fast counting I/O modules**

PCD2.H100		Counting module up to 20 kHz	5-103
PCD2.H110		General purpose module up to 100 kHz	5-108

**PCD2 SSI encoder modules**

PCD2.H150		SSI interface module	5-110
-----------	--	----------------------	-------

**PCD2 Positioning modules for stepping motors**

PCD2.H210		Motion control module for stepper motors	5-114
-----------	--	--	-------

**Positioning modules for servo-drives**

PCD2.H310		Motion control module for servo-motors 1-axis encoder 24 V <sub>DC</sub>	5-119
PCD2.H311		Same as H310, but 1-axis encoder 5 V <sub>DC</sub>	5-119
PCD2.H320		Motion control module for servo-drives 2-axis with encoder 24 V <sub>DC</sub>	5-123
PCD2.H322		Same as H320, but 1-axis (slave operation)	5-123
PCD2.H325		Motion control module for servo-drives, 2-axis with 5 V and SSI absolute value encoder	5-123
PCD2.H327		Same as H325, but 1-axis (slave operation)	5-123

PCD2.E166	16 inputs, 24 VDC, 0.2 ms, spring terminal connection

5

Definition of input signals

for 5 VDC	for 12 VDC	for 24 VDC
PCD2.E116	PCD2.E112	PCD2.E110, PCD2.E111, PCD2.E160...E166
		

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.2.1 PCD2.E11x, 8 digital inputs

#### Application

Low-cost input module for source or sink operation with 8 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD2.E111 differs from the PCD2.E110 in its shorter input delay, typically 0.2 ms.

#### Technical data

Number of inputs:	8	electrically connected, source or sink operation
Input voltage	E110 : E111 : E112 : E116 : Special :	24 VDC (15...30 VDC) smoothed or pulsed 24 VDC (15...30 VDC) smoothed, max. 10 % residual ripple 12 VDC (7.5...15 VDC) smoothed, max. 10 % residual ripple 5 VDC (1...7 VDC) smoothed, max. 10 % residual ripple other values on request
Input current:		6 mA at 24 VDC
Input delay	E110 : E111 : E112 : E116:	typically 8 ms typically 0.2 ms typically 9 ms typically 0.2 ms
Resistance to interference: acc. to IEC 801-4		2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)		1...24 mA typically 12 mA
Internal current consumption: (from V+ bus)		0 mA
External current consumption:		max. 48 mA (all inputs=1) at 24 VDC
Terminals:		Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

LEDs and connection terminals

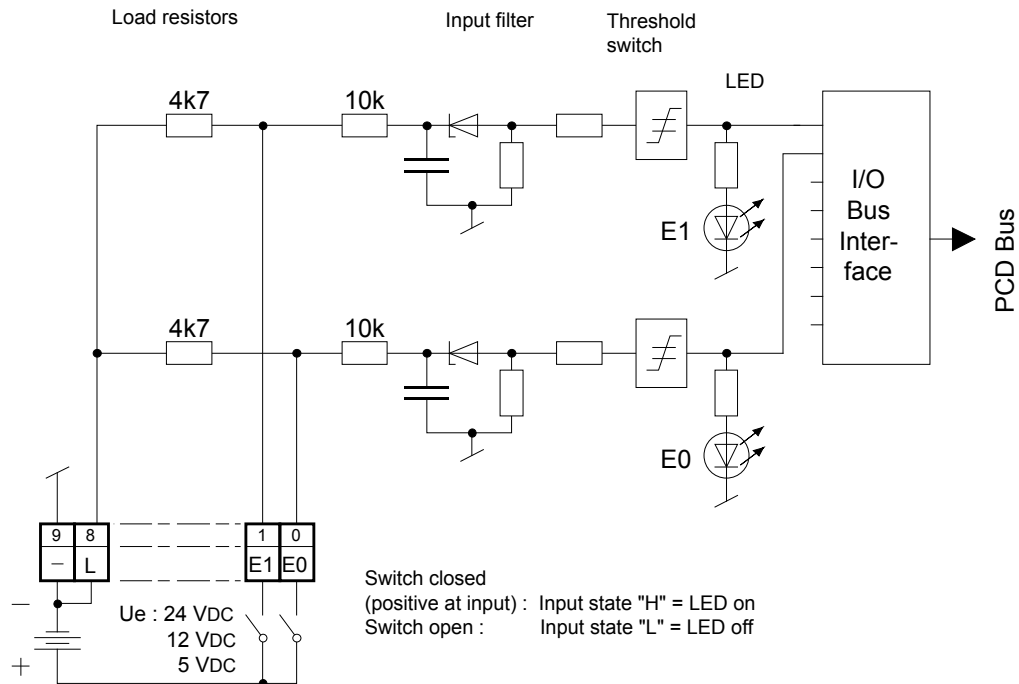

## Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

### Source operation (positive logic):

### Sink operation (negative logic):

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.2.2 PCD2.E160/161, 16 digital inputs, ribbon cable connector

Application

Low-cost input module for source or sink operation with 16 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD2.E161 differs from the PCD2.E160 in its shorter input delay, typically 0.2 ms.

Technical data

Number of inputs:	16 electrically connected, source or sink operation
Input voltage E160: E161:	24 VDC (15...30 VDC) smoothed or pulsed 24 VDC (15...30 VDC) smoothed max. 10% residual ripple
Input current:	4 mA per input at 24 VDC
Input delay E160: E161:	typically 8 ms typically 0.2 ms
Resistance to interference: acc. to IEC 1000-4-4	2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1 ... 72 mA typically 36 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption	max. 64 mA (all inputs="1") at 24 VDC
Terminals:	34-pole ribbon connector

5

LEDs and connection terminals

5

For every 2 inputs, a 3-colour LED is fitted:

LED																
	E0	E1	E2	E3	E4	E5	E6	E7	E8	E9	E10	E11	E12	E13	E14	E15
off	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
red	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0
green	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
yellow	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

Saia Burgess Controls provides a wide range of pre-configured cables with a 34-pole ribbon connector at one or both ends.

These connection cables can be plugged at one end into the PCD2.E160 I/O module and at the other end into an I/O terminal adapter.  
The following adapters are obtainable from Saia Burgess Controls: terminal adapters for connecting 3-wire sensors to individual terminals for Signal, Plus and Minus; terminal adapters for connecting 16 I/Os with and without LED and relay interface; and terminal adapters with changeover contacts for signal conversion for digital output modules.

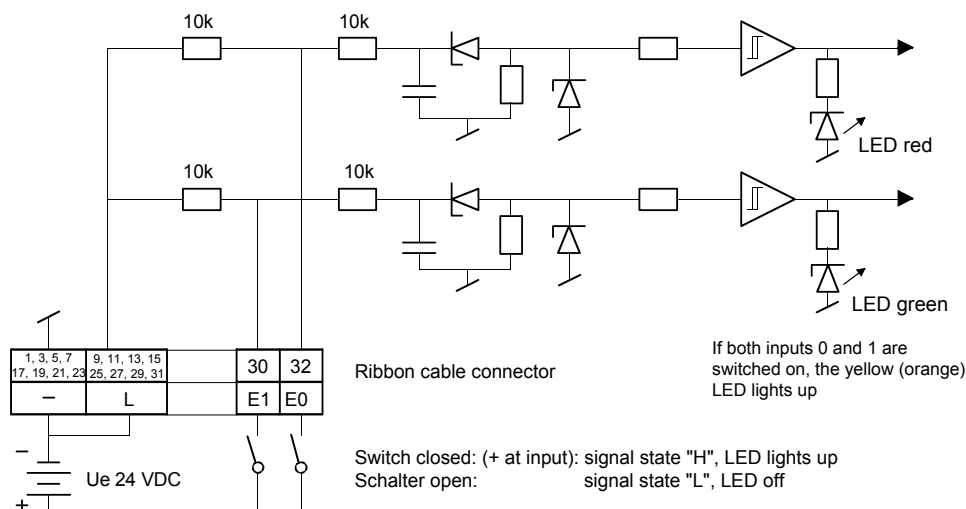

Further information can be found in the Manual on “System cables and connection system” 26/792.

- The following materials can be ordered from ‘3M’:
- Socket connector 34-pole Type 3414-6600
  - (Metal strain relief) \*) Type 3448-2034
  - (Handle for socket connector 34-pole) \*) Type 3490-3
- Matching cables can be ordered in reels from ‘3M’:
- Ribbon cable 34-pole, grey with pin 1 identification Type 3770/34 or 3801/34
  - Round cable 34-pole, grey with pin 1 identification Type 3759/34
- \*) optional

## Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

### Source operation (positive logic):

5

### Sink operation (negative logic):

**Watchdog:** This module can interact with the watchdog; if it is used on base address 240 (or 496 for the PCD2.M17x), the last input with address 255 (or 511 for the PCD2.M17x) cannot be used.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.2.3 PCD2.E165/166, 16 digital inputs, spring terminal connectors

Application

Low-cost input module for source or sink operation with 16 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD2.E166 differs from the PCD2.E165 in its shorter input delay, typically 0.2 ms.

Technical data

Number of inputs:	16 electrically connected, source or sink operation
Input voltage E165: E166:	24 VDC (15...30 VDC) smoothed or pulsed 24 VDC (15...30 VDC) smoothed max. 10% residual ripple
Input current:	4 mA per input at 24 VDC
Input delay E165: E166:	typically 8 ms typically 0.2 ms
Resistance to interference: acc. to IEC 1000-4-4	2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...72 mA typically 36 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption	max. 64 mA (all inputs=1) at 24 VDC
Terminals:	Spring terminal connection (not pluggable), for wires up to max. 0.5 mm <sup>2</sup> (1 × AWG 20)

LEDs and connection terminals

For every 2 inputs, a 3-colour LED is fitted:

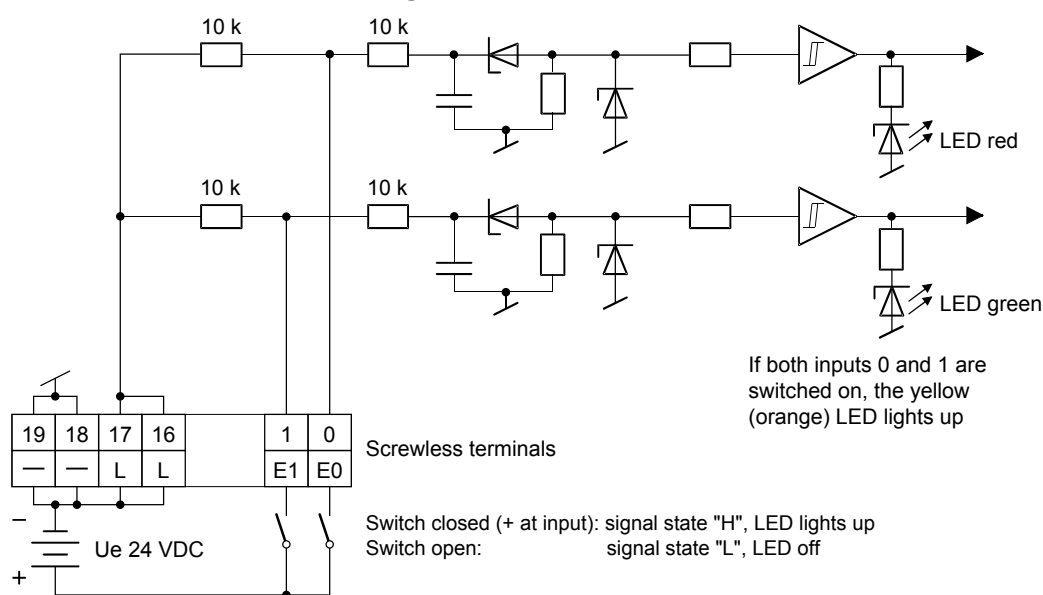

LED																
	E0	E1	E2	E3	E4	E5	E6	E7	E8	E9	E10	E11	E12	E13	E14	E15
off	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
red	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0
green	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
yellow	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

### Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

5

#### Source operation (positive logic):

#### Sink operation (negative logic):

**Watchdog:** This module can interact with the watchdog; if it is used on base address 240 (or 496 for the PCD2.M17x), the last input with address 255 (or 511 for the PCD2.M17x) cannot be used.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.3 Digital input modules, electrically isolated

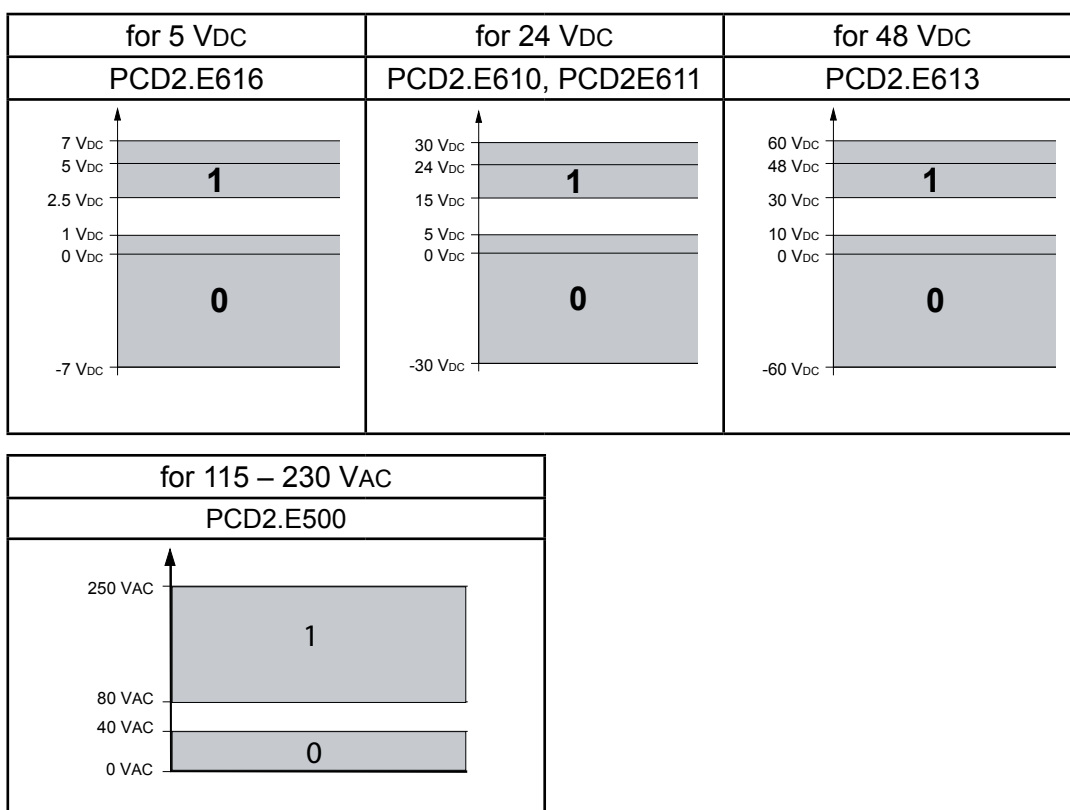

<b>PCD2.E500</b>	<b>6 inputs for 115 - 230 VAC</b>
<b>PCD2.E610</b>	<b>8 inputs 24 VDC, 10 ms</b>
<b>PCD2.E611</b>	<b>8 inputs 24 VDC, 0.2 ms</b>
<b>PCD2.E613</b>	<b>8 inputs 48 VDC, 9 ms</b>
<b>PCD2.E616</b>	<b>8 inputs 5 VDC, 0.2 ms,</b>

Electrical isolation of outputs to the Saia PCD®.  
The channels are not isolated from each other.

5

#### Definition of input signals

#### Installation instructions

For reasons of safety it is not permissible to connect low voltages (up to 50 V) and higher voltages (50...250 V) to the same module.

If a Saia PCD® module is connected to a higher voltage (50...250 V), approved components for this voltage must be used for all elements that are electrically connected to the system.

Using higher voltage (50...250 V), all connections to the relay contacts must be connected on the same circuit, i.e. in such a way that they are all protected against one AC phase by one common fuse. Each load circuit may also be protected individually.

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.3.1 PCD2.E500, 6 digital inputs for 115 - 230 V<sub>AC</sub>

#### Application

Module with 6 electrically isolated inputs for alternating current. The inputs are set up for source operation and **have one common “COM” terminal**. Only the positive half-wave of the alternating current is used.

#### Technical data

Number of inputs	6 electrically isolated from the CPU, Source operation, all inputs to the module in the same phase
Input voltage	115/230 V 50/60 Hz, sinusoidal (80 to 250 V <sub>AC</sub> )
Input current	115 V <sub>AC</sub> : 5...6 mA (wattless current) 230 V <sub>AC</sub> : 10...12 mA (wattless current)
Input delay switch-on: switch-off:	typically 10 ms; max. 20 ms typically 20 ms; max. 30 ms
LED	supplied directly from input current
Resistance to interference acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Electrical isolation voltage	2000 V <sub>AC</sub> , 1 min
Electrical isolation resistance	100 MOhm / 500 V <sub>DC</sub>
Optocoupler isolation voltage	2.5 kV Galvanic separation of outputs to Saia PCD®. The channels themselves not are separated.
Internal current consumption: (from +5 V bus)	< 1 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

5

Switch on/off level:

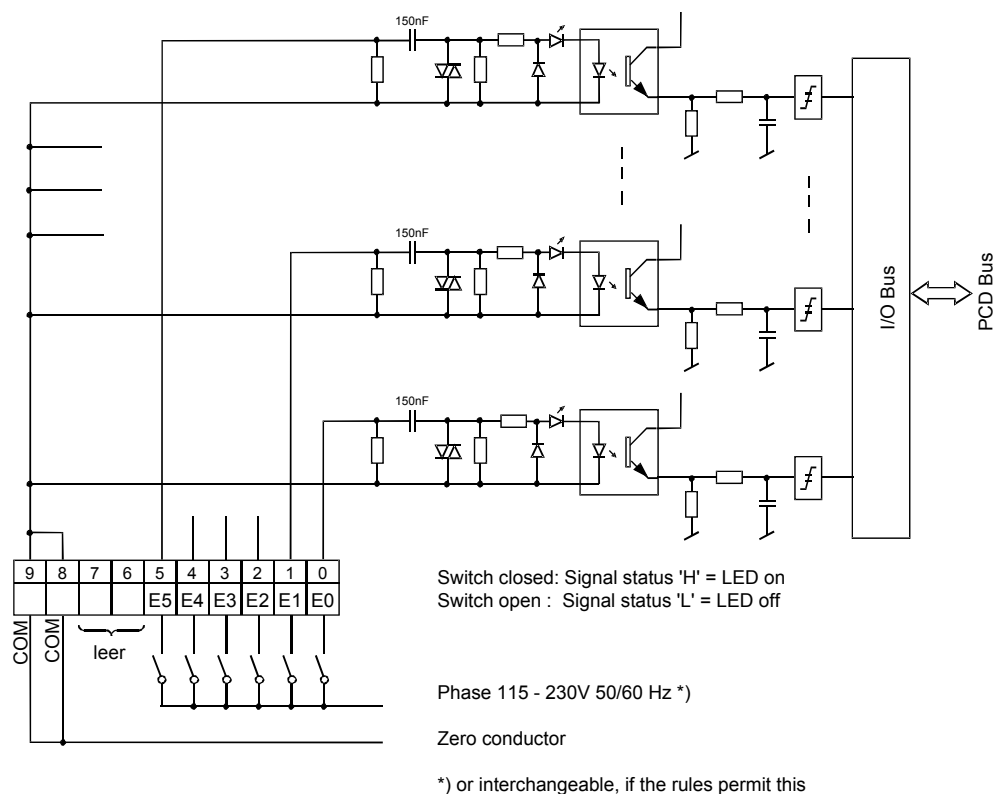

## LEDs and connection terminals

5

## Input circuits and terminal designation

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.3.2 PCD2.E61x, 8 digital inputs, electrically isolated

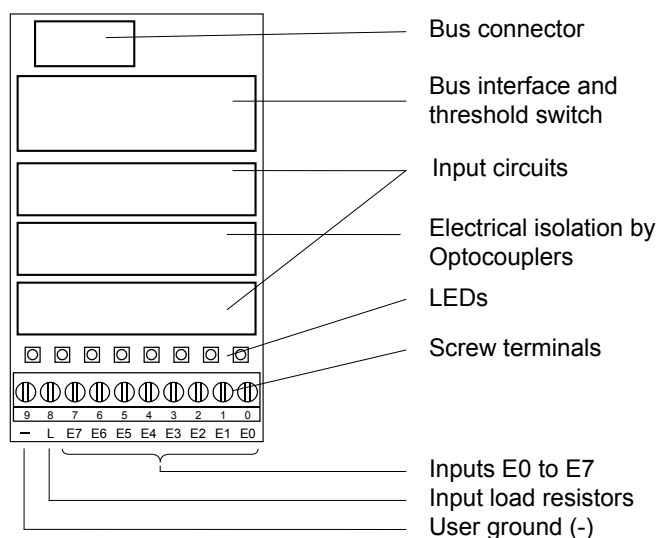

#### Application

Input module for source or sink operation with 8 inputs, electrically isolated by optocoupler. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD2.E611 differs from the PCD2.E610 in its shorter input delay, typically 0.2 ms.

#### Technical data

Number of inputs:	8 electrically isolated by optocoupler, source or sink operation, all inputs to the module in the same phase			
Input voltage	E610:	24 VDC (15...30 VDC) smoothed or pulsed		
	E611:	24 VDC (15...30 VDC) smoothed		
	E613:	max. 10 % residual ripple		
	E616:	48 VDC (30...60 VDC) smoothed		
		max. 10 % residual ripple		
		5 VDC (7.5...15 VDC) smoothed		
		max. 10 % residual ripple		
Supply voltage:	E610:	E611:	E613:	E616:
for source operation:	min. 15 V	15 V	30 V	3 V

Optocoupler isolation voltage:	2.5 kV			
	Galvanic separation of outputs to Saia PCD®.			
	The channels themselves not are separated.			
Internal current consumption:	1 ... 24 mA			
(from +5 V bus)	typ. 12 mA			
Internal current consumption:	0 mA			
(from V+ bus)				
External current consumption:	max. 40 mA (all inputs=1) at 24 VDC, (source operation),			
	max. 18 mA (sink operation)			
Terminals:	Pluggable 10-pole spring terminal block			
	(4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>			

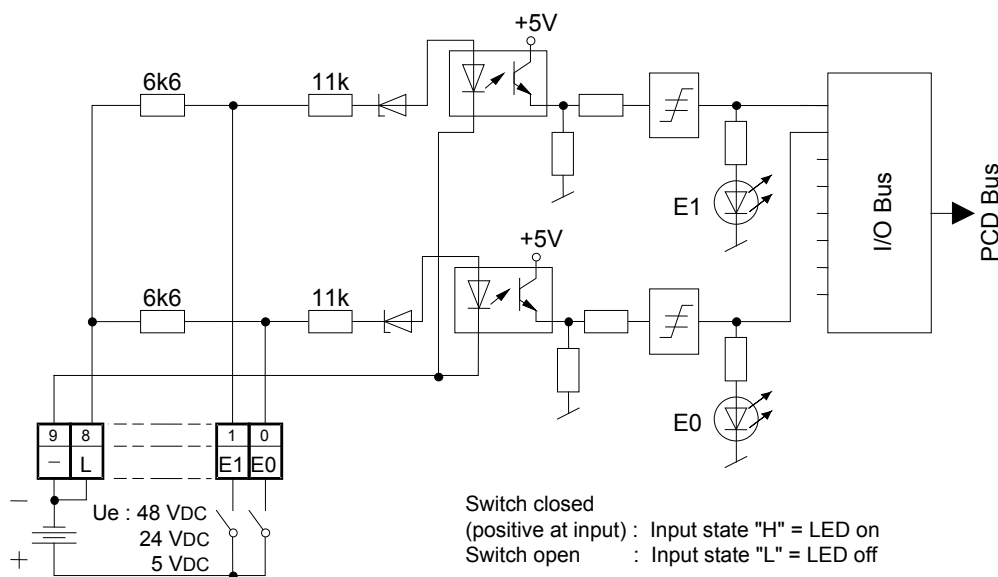

## LEDs and connection terminals

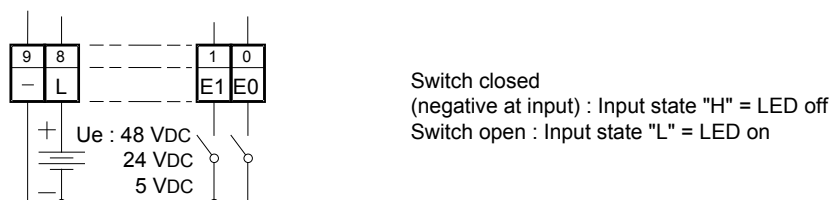

5

## Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation. **Source operation (positive logic):**

## Sink operation (negative logic):

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.4 Digital output modules

<b>PCD2.A300</b>	<b>6 outputs 2 A, 10...32 VDC</b>
<b>PCD2.A400</b>	<b>8 outputs 0.5 A, 10...32 VDC</b>
<b>PCD2.A460</b>	<b>16 outputs 0.5 A, 10...32 VDC</b>
<b>PCD2.A465</b>	<b>16 outputs 0.5 A, 10..32 VDC</b>

5

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

5.4.1 PCD2.A300, 6 digital outputs for 2 A each

Application

Low cost output module with 6 transistor outputs 5 mA...2 A, without short-circuit protection. The individual circuits are electrically connected; the voltage range is 10...32 VDC.

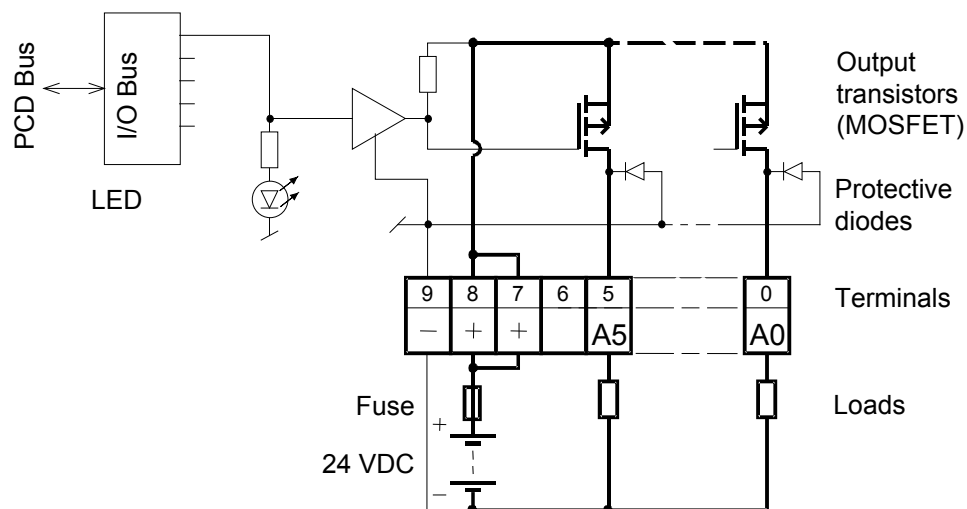

Technical data

Number of outputs:	6, electrically connected
Output current:	5 mA...2 A (leakage current max. 0.1 mA)
Total current per module:	6 × 2 A = 12 A (on 100 % duty cycle)
Operating mode:	Source operation (positive switching)
Voltage range:	10...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	0.2 V at 2 A
Output delay:	Switch-on delay <1 µs Switch-off delay <200 µs with inductive loads the delay is longer, because of the protective diode.
Isolation voltage:	1000 VAC, 1 min
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...20 mA typically 12 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²

LEDs and connection terminals

### Output circuits and terminal designation

Output conducting (set): LED on  
 Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) fuse of max. 12.5 A.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.4.2 PCD2.A400, 8 digital outputs for 0.5 A each

### Application

Low cost output module with 8 transistor outputs 5...500 mA, without short circuit protection. For non-isolated circuits in the voltage range 5...32 VDC.

### Technical data (for version "B")\*

Number of outputs:	8, electrically connected
Output current:	5...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 $\Omega$
Total current per module:	4 A on 100 % duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	5...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	$\leq 0.4$ V at 0.5 A
Output delay:	Switch-on delay typically 10 $\mu$ s Switch-off delay typically 50 $\mu$ s (ohmic load 5...500 mA), longer with inductive load, because of the protective diode.
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

\* Version "B" available since February 1995

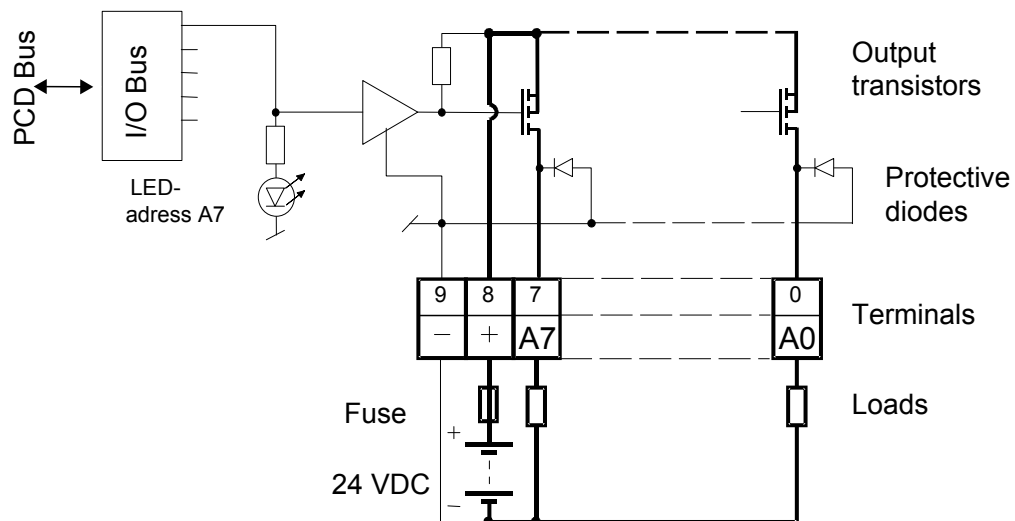

(Version "A" was fitted with bipolar transistors. These had a shorter recovery time, but also a higher residual voltage, resulting in a restriction on 100 % loading)

## LEDs and connection terminals

5

## Output circuits and terminal designation

Output conducting (set): LED on

Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) 4 A fuse

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.4.3 PCD2.A460, 16 digital outputs for 0.5 A each, with ribbon connector

Application

Low cost output module with 16 transistor outputs 5...500 mA, with short-circuit protection. The individual circuits are electrically connected; the voltage range is 10...32 VDC.

Technical data

Number of outputs:	16, electrically connected
Output current:	5...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 Ω
Short circuit protection	yes
Total current per module:	8 A on 100 % duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	10...32 VDC, smoothed, max. 10 % residual ripple
Voltage drop:	max. 0.3 V at 0.5 A
Output delay:	typically 50 µs, max. 100 µs for resistive load
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	max 74 mA (all outputs = "1") typically 40 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	34-pole ribbon cable connector

LEDs and connection terminals

For every 2 inputs, a 3-colour LED is fitted:

LED																
	A0	A1	A2	A3	A4	A5	A6	A7	A8	A9	A10	A11	A12	A13	A14	A15
off	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
red	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0
green	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
yellow	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

Saia Burgess Controls provides a wide range of pre-configured cables with a 34-pole ribbon connector at one or both ends.

These connection cables can be plugged at one end into the PCD2.E460 I/O module and at the other end into an I/O terminal adapter.

The following adapters are obtainable from Saia Burgess Controls: terminal adapters for connecting 3-wire sensors to individual terminals for Signal, Plus and Minus; terminal adapters for connecting 16 I/Os with and without LED and relay interface; and terminal adapters with changeover contacts for signal conversion for digital output modules.

5

Further information can be found in the Manual on "System cables and connection system" 26/792.

The following materials can be ordered from '3M':

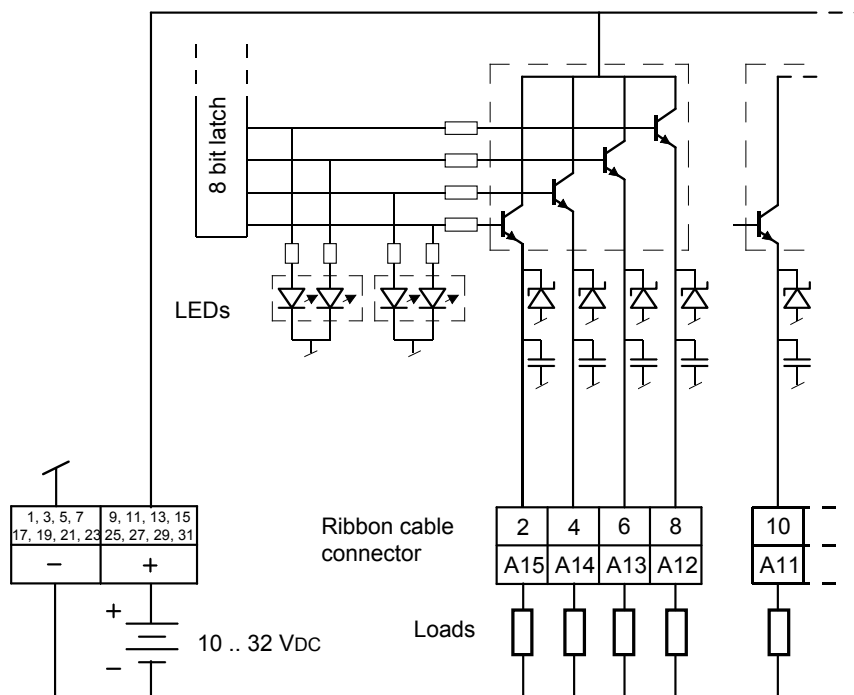

- Socket connector 34-pole Type 3414-6600
- (Metal strain relief) \*) Type 3448-2034
- (Handle for socket connector 34-pole) \*) Type 3490-3

Matching cables can be ordered in reels from '3M':

- Ribbon cable 34-pole,  
grey with pin 1 identification Type 3770/34 or 3801/34
- Round cable 34-pole,  
grey with pin 1 identification Type 3759/34

\*) optional

## Output circuits and terminal designation

5

**Watchdog:** This module can interact with the watchdog; if it is used on base address 240 (or 496 for the PCD2.M17x), the last input with address 255 (or 511 for the PCD2.M17x) cannot be used.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.4.4 PCD2.A465, 16 digital outputs, for 0.5 A each

Application

Low cost output module with 16 transistor outputs 5...500 mA, with short-circuit protection. The individual circuits are electrically connected; the voltage range is 10...32 VDC.

Technical data

Number of outputs:	16, electrically connected
Output current:	5...500 mA (leakage current max. 0,1 mA) Within the voltage range 10...24 VDC, the load resistance should be at least 48 Ω
Short circuit protection	yes
Total current per module:	8 A on 100 % duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	10...32 VDC, smoothed, max. 10 % residual ripple
Voltage drop:	max. 0.3 V at 0.5 A
Output delay:	typically 50 µs, max. 100 µs for resistive load
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	max 74 mA (all outputs = "1") typically 40 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Spring terminal connection (not pluggable), for wires up to max. 0.5 mm² (1 × AWG 20)

LEDs and connection terminals

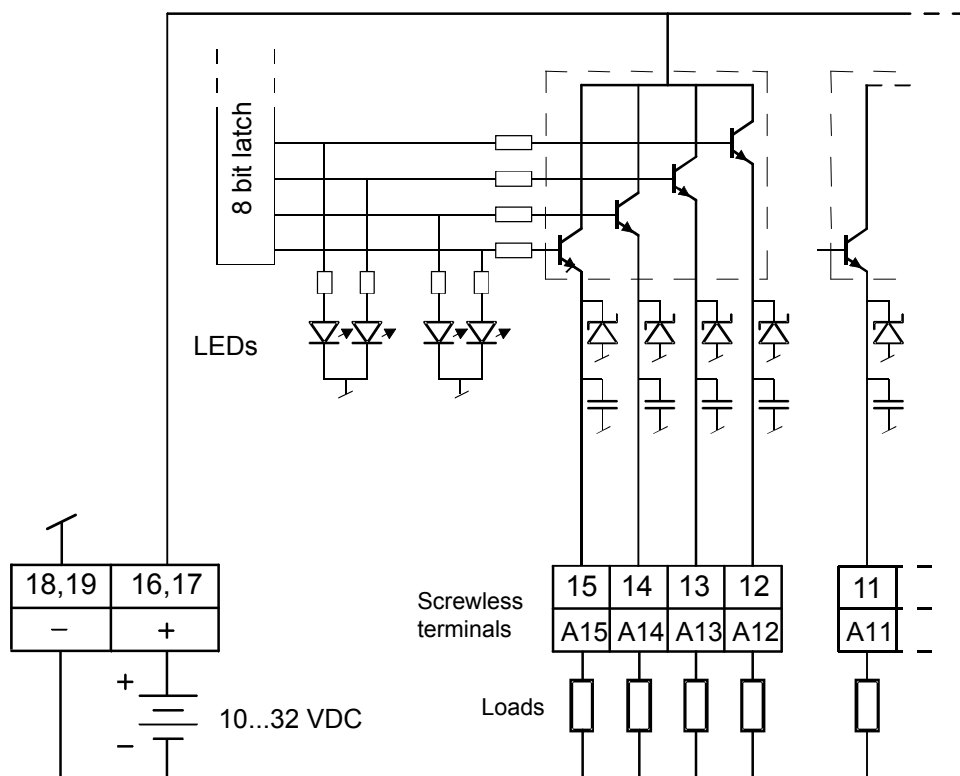

For every 2 outputs, a 3-colour LED is fitted:

LED																
	A0	A1	A2	A3	A4	A5	A6	A7	A8	A9	A10	A11	A12	A13	A14	A15
off	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
red	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0
green	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
yellow	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

### Output circuits and terminal designation

5

**Watchdog:** This module can interact with the watchdog; if it is used on base address 240 (or 496 for the PCD2.M17x), the last input with address 255 (or 511 for the PCD2.M17x) cannot be used.

### Installation instructions

For reasons of safety it is not permissible to connect low voltages (up to 50 V) and higher voltages (50...250 V) to the same module.

If a Saia PCD® module is connected to a higher voltage (50...250 V), approved components for this voltage must be used for all elements that are electrically connected to the system.

Using higher voltage (50...250 V), all connections to the relay contacts must be connected on the same circuit, i.e. in such a way that they are all protected against one AC phase by one common fuse. Each load circuit may also be protected individually.

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

In the appendix, Chapter A.4 relay contacts, are calculation data and wiring suggestions for the relay contacts. These data should be absolutely considered for safe switching and a long life span of the relays.

### 5.5.1 PCD2.A200, 4 relays with make contacts, with contact protection

#### Application

The module contains 4 relays with normally-open contacts for direct or alternating current up to 2 A, 250 VAC. The contacts are protected by a varistor and an RC element. The module is especially suited wherever perfectly isolated AC switching circuits with infrequent switching have to be controlled.

#### Technical data

Number of outputs:	4, electrically isolated make contacts
Type of relay (typical):	RE 030024, SCHRACK
Switching capacity: (contact lifetime)	<div>2 A, 250 VAC AC1      <math>0.7 \times 10^6</math> operations</div> <div>1 A, 250 VAC AC11     <math>1.0 \times 10^6</math> operations</div> <div>2 A, 50 VDC DC1       <math>0.3 \times 10^6</math> operations<sup>3)</sup></div> <div>1 A, 24 VDC DC11      <math>0.1 \times 10^6</math> operations<sup>1)3)</sup></div>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	<div>20 °C: 17.0 ... 35 VDC</div> <div>30 °C: 19.5 ... 35 VDC</div> <div>40 °C: 20.5 ... 32 VDC</div> <div>50 °C: 21.5 ... 30 VDC</div>
Output delay:	typically 5 ms bei 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1 ... 15 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 32 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

5

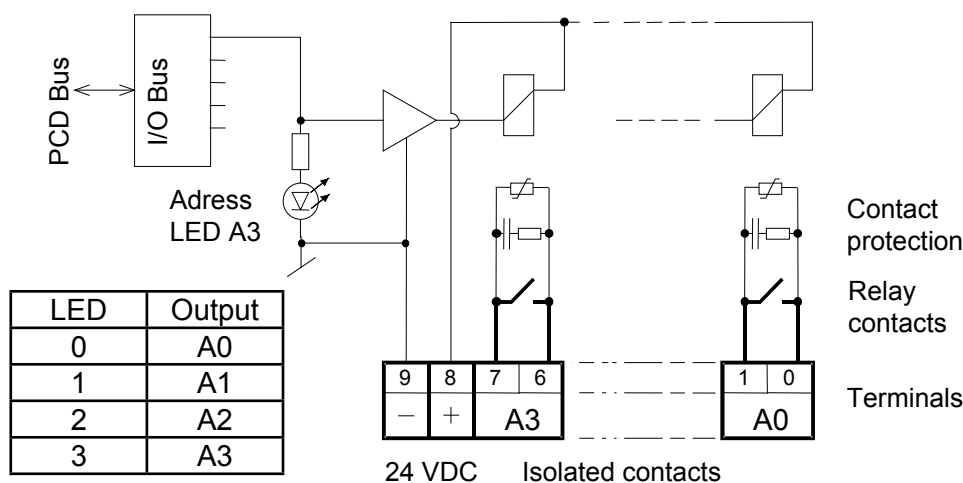

In the appendix, Chapter A.4 relay contacts, are calculation data and wiring suggestions for the relay contacts. These data should be absolutely considered for safe switching and a long life span of the relays.

## LEDs and connection terminals

## Output circuits and terminal designation

Relay energized (contact closed):    LED on  
 Relay reset (contact open):    LED off  
 24 VDC must be connected to the +/- terminals.

With an open relay contact, the current leakage through the contact protection is **0.7 mA** (at 230 V / 50 Hz). This should be taken into account for smaller AC loads. If this is too high, it is recommended to use a PCD2.A220 Module (without contact protection).

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.5.2 PCD2.A210, 4 relays with break contacts, with contact protection

### Application

The module contains 4 relays with normally-closed contacts for direct or alternating current up to 2 A, 250 VAC. The contacts are protected by a varistor. The module is especially suited wherever perfectly isolated AC switching circuits with infrequent switching have to be controlled.

### Technical data

Number of outputs:	4, electrically isolated break contacts
Type of relay (typical):	RE 014024, SCHRACK
Switching capacity: (contact lifetime)	<div>2 A, 250 VAC AC1      <math>0.7 \times 10^6</math> operations</div> <div>1 A, 250 VAC AC11     <math>1.0 \times 10^6</math> operations</div> <div>2 A, 50 VDC DC11      <math>0.3 \times 10^6</math> operations<sup>3)</sup></div> <div>1 A, 24 VDC DC11      <math>0.1 \times 10^6</math> operations<sup>1)3)</sup></div>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 9 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	<div>20°C: 17.0...35 VDC</div> <div>30°C: 19.5...35 VDC</div> <div>40°C: 20.5...32 VDC</div> <div>50°C: 21.5...30 VDC</div>
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...15 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 32 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

5

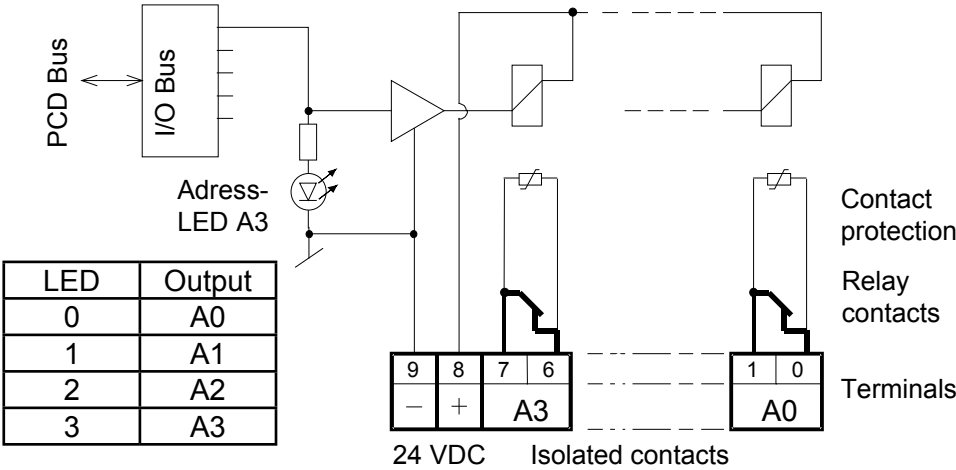

In the appendix, Chapter A.4 relay contacts, are calculation data and wiring suggestions for the relay contacts. These data should be absolutely considered for safe switching and a long life span of the relays.

LEDs and connection terminals

Output circuits and terminal designation

Relay energized (contact open): LED on  
Relay reset (contact closed): LED off  
24 VDC must be connected to the +/- terminals.

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.5.3 PCD2.A220, 6 relays with make contacts, without contact protection

#### Application

The module contains 6 relays with normally-open contacts for direct or alternating current up to 2 A, 250 VAC. The module is especially suited wherever AC switching circuits with infrequent switching have to be controlled. For space reasons, there is no integrated contact protection. Each group of 3 relays has a common connection.

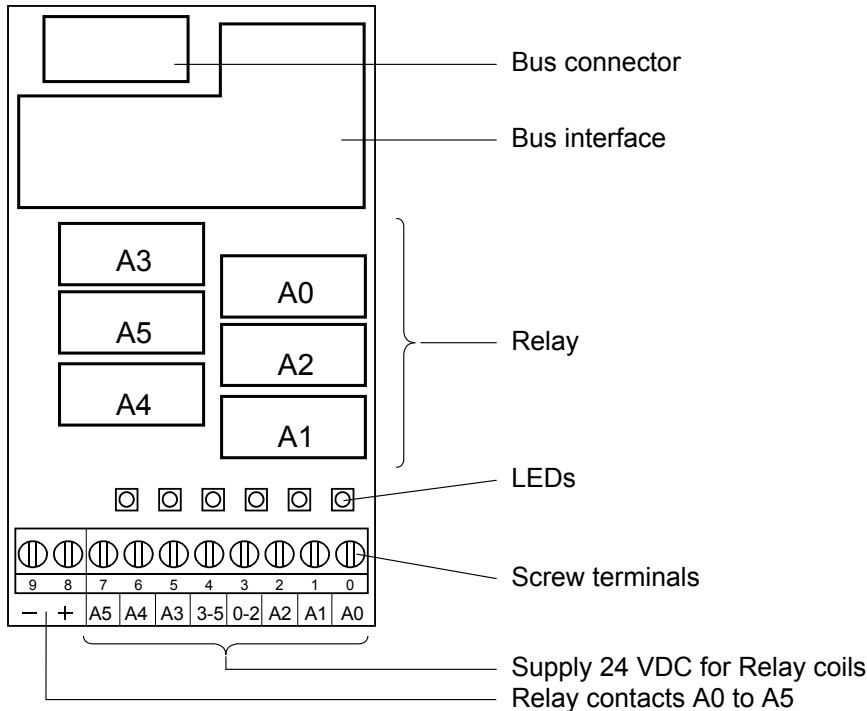

#### Technical data

Number of outputs:	3 + 3 make contacts with common terminal
Type of relay (typical):	RE 030024, SCHRACK
Switching capacity: (contact lifetime)	2 A, 250 VAC AC1 $0.7 \times 10^6$ operations 1 A, 250 VAC AC11 $1.0 \times 10^6$ operations 2 A, 50 VDC DC11 $0.3 \times 10^6$ operations <sup>3)</sup> 1 A, 24 VDC DC11 $0.1 \times 10^6$ operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20 °C: 17.0...35 VDC 30 °C: 19.5...35 VDC 40 °C: 20.5...32 VDC 50 °C: 21.5...30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...20 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 48 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

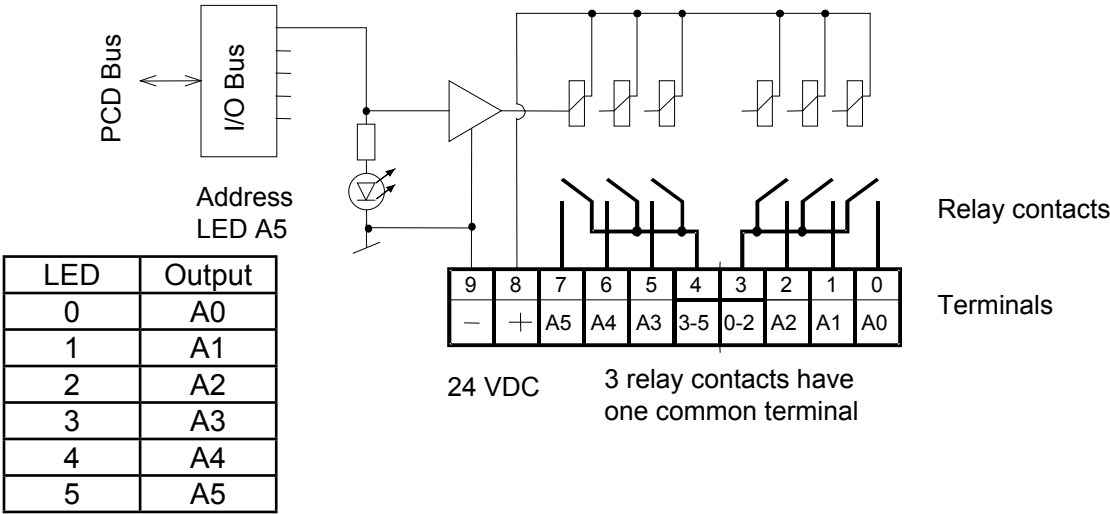

In the appendix, Chapter A.4 relay contacts, are calculation data and wiring suggestions for the relay contacts. These data should be absolutely considered for safe switching and a long life span of the relays.

LEDs and connection terminals

Output circuits and terminal designation

Relay energized (contact closed): LED on  
Relay reset (contact open): LED off  
24 VDC must be connected to the +/- terminals.

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.5.4 PCD2.A250, 8 relays with make contacts, without contact protection

#### Application

The module contains 8 relays with normally-open contacts for direct or alternating current up to 2 A, 48 VAC. The module is especially suited wherever AC switching circuits with infrequent switching have to be controlled. For space reasons, there is no integrated contact protection.

#### Technical data

Number of outputs:	4 + 4 make contacts with common terminal
Type of relay (typical):	RE 030024, SCHRACK
Operating mode:	> 12 V, > 100 mA
Switching capacity: *) (contact lifetime)	2 A, 48 VAC AC1 $0.7 \times 10^6$ operations 1 A, 48 VAC AC11 $1.0 \times 10^6$ operations 2 A, 50 VDC DC11 $0.3 \times 10^6$ operations <sup>3)</sup> 1 A, 24 VDC DC11 $0.1 \times 10^6$ operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20 °C: 17.0 ... 35 VDC 30 °C: 19.5 ... 35 VDC 40 °C: 20.5 ... 32 VDC 50 °C: 21.5 ... 30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1 ... 25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 64 mA
Terminals:	Pluggable 14-pole screw terminal block (4 405 4869 0), for wires up to 0.6 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

5

\*) Higher voltages are not allowed for this module because safety standards for clearance and creepage distances do not apply.

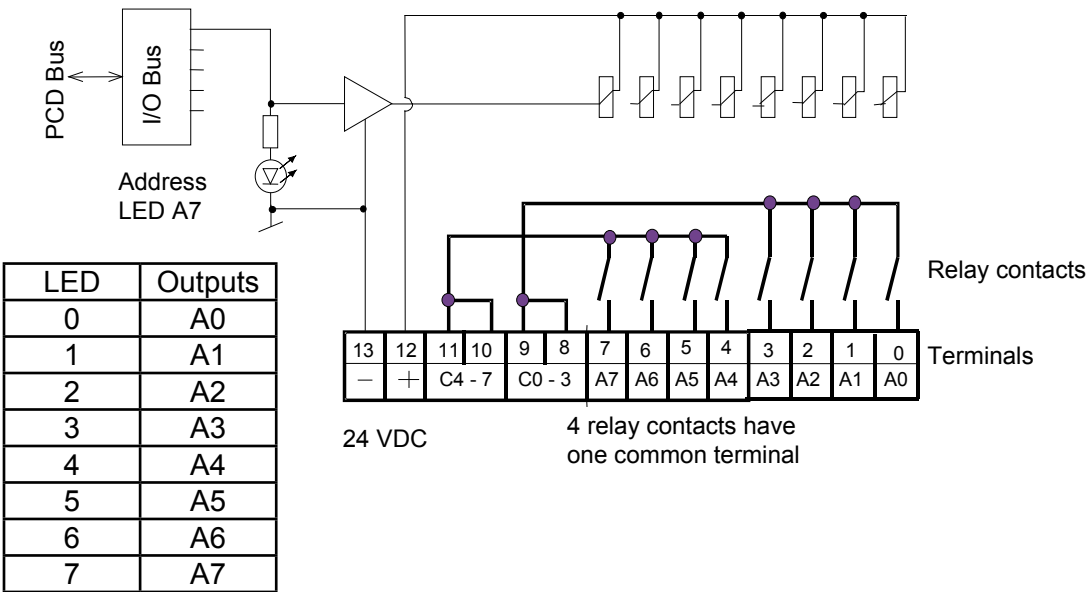

In the appendix, Chapter A.4 relay contacts, are calculation data and wiring suggestions for the relay contacts. These data should be absolutely considered for safe switching and a long life span of the relays.

LEDs and connection terminals

Output circuits and terminal designation

Relay energized (contact closed): LED on  
Relay reset (contact open): LED off  
24 VDC must be connected to the +/- terminals.

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.5.5 PCD2.A410, 8 digital outputs for 0.5 A each, electrically isolated

#### Application

Output module, electrically isolated from the CPU, with 8 MOSFET transistor outputs, without short-circuit protection. Voltage range 5...32 VDC.

This module is not suitable for triggering the PCA2.D12/D14 display modules.

5

#### Technical data

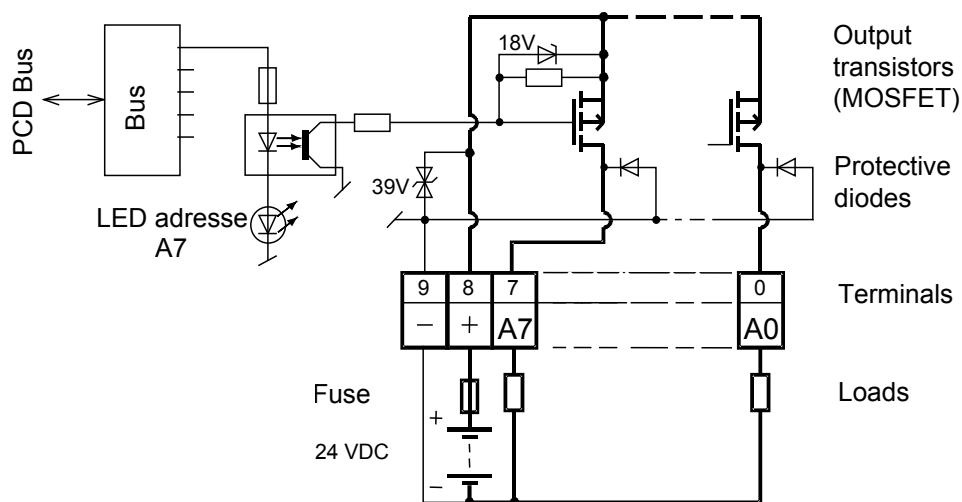

Number of outputs:	8, electrically isolated
Output current:	1...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 Ω.
Total current per module:	4 A on 100 % duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	5...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	≤ 0,4 V at 0,5 A
Output delay:	Switch-on delay typically 10 µs Switch-off delay typically 50 µs (ohmic load 5...500 mA), longer with inductive load, because of the protective diode.
Isolation voltage:	1000 VAC, 1 min
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...24 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

## LEDs and connection terminals

5

## Output circuits and terminal designation

Output conducting (set): LED on  
 Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) 4 A fuse

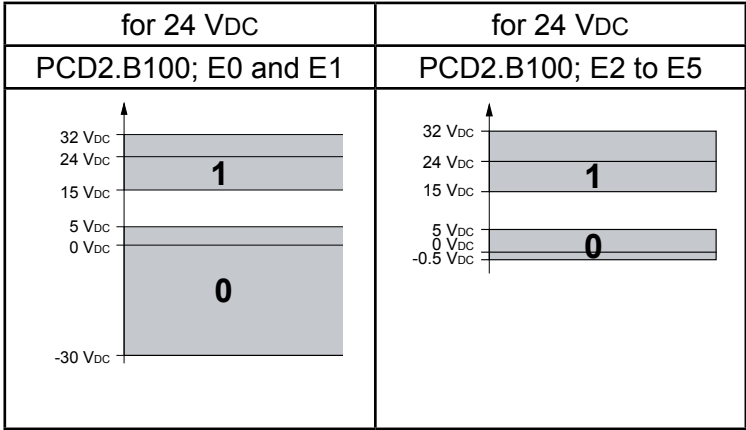

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.6 Digital combined input and output modules

PCD2.B100	2 inputs, 2 outputs, 4 selectable as inputs or outputs
-----------	--

Definition of input signals

5

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.6.1 PCD2.B100, 2 inputs + 2 outputs + 4 digital inputs/outputs (selectable)

#### Application

Economical combined input/output module with:

- 2 inputs 24 VDC/8 ms for source operation, electrically connected
- 2 transistor outputs 0.5 A/5...32 VDC, electrically connected, not short circuit protected, and
- 4 combined inputs/outputs 24 VDC/8 ms or 0.5 A/5...32 VDC on common I/O terminals.

#### Technical data on inputs

Number of inputs:	6 (2 + 4), electrically connected, source operation
Input voltage:	24 VDC smoothed or pulsed
2 inputs E0 and E1 low-range: high-range:	-30...+5 V +15...+32 V
4 inputs E/A2...E/A5 low-range: high-range:	-0.5...+5 V *) +15...+32 V
All 6 inputs: low-high switching threshold: high-low switching threshold: hysteresis: input current (24 VDC): switching delay 0-1 (24 VDC): switching delay 1-0 (24 VDC):	13 V typically 6 V typically 7 V typically  7 mA typically 8 ms typically 8 ms typically
*) Negative voltage is restricted by the protective diode ( $I_{\max} = 0.5 \text{ A}$ )	

#### Technical data on outputs

Number of outputs:	6 (2 + 4) electrically connected, source operation not short circuit protected
Current:	5...500 mA steady load
Voltage range:	5...32 VDC *)
Voltage drop:	< 0.3 V at 500 mA for A6 and A7 < 0.7 V at 500 mA for E/A2...E/A5
Total current per module:	3 A steady load
Switch-on delay:	10 µs typically
Switch-off delay:	50 µs typically (100 µs max.), (ohmic load 5...500 mA), longer for inductive load because of protective diode.
*) If it is intended to read the status of a combined output, the external voltage must be at least 17 VDC, as both the status and the LED are displayed via the input.	

## General technical data on inputs and outputs

Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1 ... 25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

## LEDs and connection terminals

5

The module contains 8 LEDs:

- 2 LEDs are directly triggered by the pure inputs.
- 2 LEDs are directly triggered by the pure outputs.
- 4 LEDs are triggered by the inputs of the combined inputs/outputs and therefore always indicate voltage status at the I/O terminal.

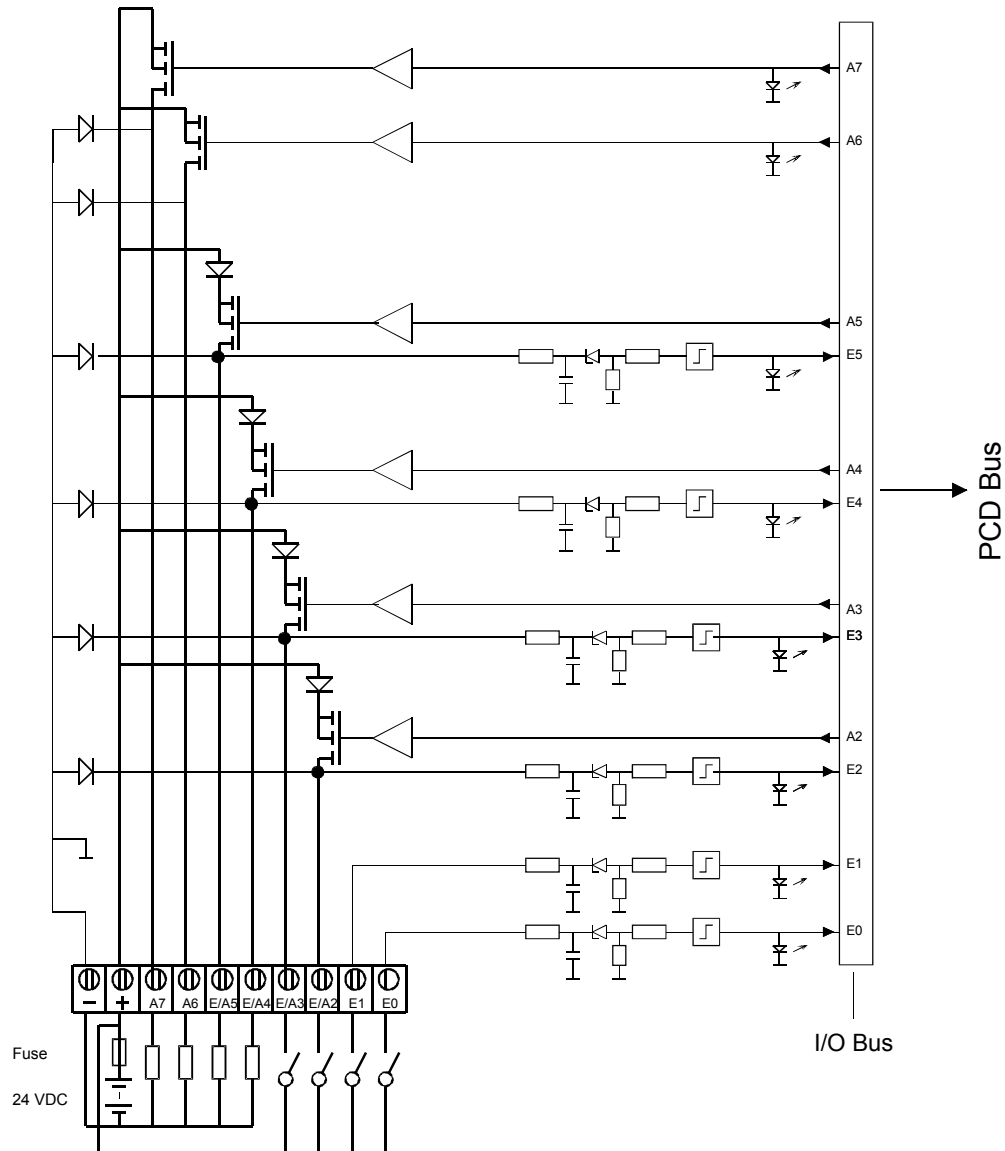

If the combined I/Os are used as outputs, the following should be noted:  
The LEDs of combined outputs E/A2... E/A5 only light up when the output is high and a supply voltage of 24 V is connected.

## Mixing the combined inputs/outputs

If combined I/Os are used as inputs in source operation, i.e. with sending devices which either apply +24 V to the input or are open, the low status of an open input can be overwritten as high if the corresponding output at the same address is set in error. However, if the input is shifted to 0 V with a changeover contact and the corresponding output is set in error, the MOS-FET can be destroyed, as it is not short circuit protected. For this reason, only positive-switching contacts should be used.

## Input/output circuits and terminal designation

5

The example shows E/A2 and E/A3 used as inputs and  
E/A4 and E/A5 used as outputs

The following applies for the inputs:

Switch closed (input positive): Signal state = "1" = LED on

Switch open: Signal state = "0" = LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow 3.15 A fuse.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.7 Multi-functional input/output modules

<b>PCD2.G400</b>	<b>Multi-functional input/output module</b>
<b>PCD2.G410</b>	<b>Multi-functional input/output module</b>

The two modules PCD2.G400 and PCD2.G410 are examples of the development and production of customer-specific versions.

5

The wide range of digital and analogue I/O modules provides optimum adaptability.

- **Economic:** The modular structure means that it is only necessary to include (and pay for) those functions that are actually required for a specific application.
- **Flexible:** All modules at the I/O level can be plugged onto any preferred point on the bus and are easy to exchange.
- **Functional security:** Guaranteed by their robust design and excellent reliability (average field failure rate FFR > 106 hours).
- **Time saved in electrical wiring:** Due to plug-in screw terminals, spring terminals or ready-made cables and ribbon cable adapters.

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.7.1 PCD2.G400, multi-functional input/output module

## Application

Combined module with digital and analogue inputs and outputs. This module is designed to extend the range of uses for the Saia PCD®. The functions and the technical specification are based on the existing PCD2 modules.

**This module cannot be installed in the PCD1.**

The technical details should be taken from the descriptions of these modules.

### Number and type of inputs/outputs

5

**10 digital inputs, E0...E9 (\*addresses 0...9)**

Technical data as for PCD2.E110, but without the option of sink operation, i.e. no "L" connection.

**6 analogue outputs, A16...A21 (\*base address 16, channels 0...5)**

0...10 VDC / 8 bit; remaining tech. data as for PCD2.W400.

**8 digital outputs, A32...A39 (\*addresses 32...39)**

24 VDC / 0.5 A; remaining tech. data as for PCD2.A400.

**2 analogue inputs, E48 and E49 (\*base address 48, channels 0...1)**

0...10 VDC / 10 bit; remaining tech. data as for PCD2.W200.

**6 analogue inputs, E50...E55 (\*base address 48, channels 2...7)**

Pt/Ni 1000 / 10 bit with data as for PCD2.W220.

Internal current consumption from

+5 V bus:	10...65 mA
V+ bus:	35 mA

## LEDs and connection terminals

\*The module can be installed on sockets 1...4 (top) on the PCD2.

## 5.7.2 PCD2.G410, multi-functional I/O module with elect. isolated digital I/O

### Application

Combined module with digital and analogue inputs and outputs. This module is designed to extend the range of uses for the Saia PCD®. The functions and the technical specification are based on the existing PCD2 modules.

**This module cannot be installed in the PCD1.**

The technical details should be taken from the descriptions of these modules.

### Number and type of inputs/outputs

**16 digital inputs**, electrically isolated, E0...E15, (addresses 0...15).

Tech. data as for PCD2.E610,  
Source or sink operation selectable via "Q/S" jumper.

**4 relay outputs**, A16...A19 (addresses 16...19),  
Each with a changeover contact protected with 2 varistors.  
Tech. data as for PCD2.A200.  
The 24 V supply to the relay coils is via the screwless terminals "U<sub>ext</sub>", located next to the 4 relays.

**4 analogue outputs**, with 8 bit resolution, A32...A35  
(base address 32 \*, channels 0...3)  
Each channel selectable with "U/I" jumper for voltage 0...10 V  
or current 0...20 mA.  
Tech. data as for PCD2.W410.

**4 analogue inputs**, with 10 bit resolution, E48...E51  
(base address 48 \*, channels 0...3)

Each channel can be configured separately with the jumper combinations shown for voltage 0...10 V ("U"), current 0...20 mA ("I") or for resistive temperature sensors Pt/Ni 1000 ("T") for a temperature range from -20...+100 °C.  
Tech. data as for PCD2.W2xx.

Internal current consumption from	+5 V bus	10...50 mA
	V+ bus	10...40 mA

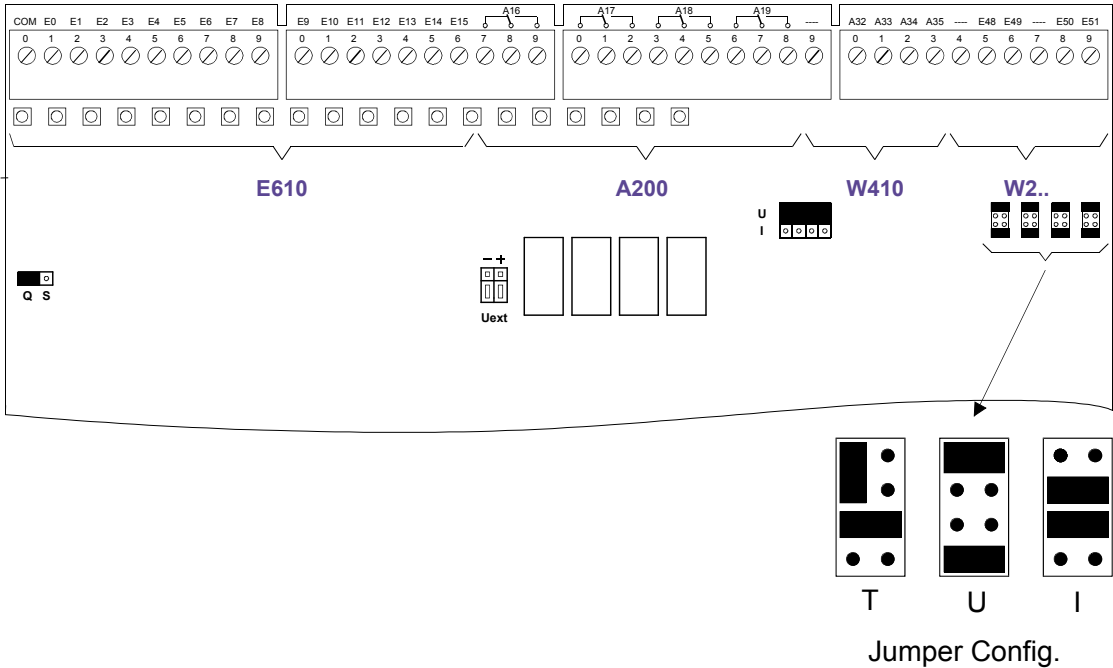

24 V connection (U<sub>ext</sub>): This is located next to the 4 relays as screwless terminal "U<sub>ext</sub>".  
The 24 V supply is common to the relay coils and the external supply to the analogue outputs.

Current consumption: 9 mA per relay  
20 mA per analogue output

\* (when the module is installed on sockets 1...4 on the PCD2).

LEDs and connection terminals

The terminal numbering refers to the use of the module on sockets 1...4 (top) on the PCD2. If the module is installed on sockets 5...8 (bottom), the value 64 must be added to the addresses given. When using the module in the PCD2.C100 expansion housing, the same logic applies, with the value 128 to be added to the 'top' and 192 to the 'bottom'.

Factory settings:	E0...E15	Source operation:	Q
	A32...A35	Voltage:	0...10 V "U"
	E48...E51	Voltage:	0...10 V "U"

## 5.8 Analogue input modules

<b>PCD2.W100**</b>	<b>4 analogue inputs 12 Bit, 0 ... 10 V, -10 V ... +10 V *)</b>
<b>PCD2.W105**</b>	<b>4 analogue inputs 12 Bit, 0 ... +20 mA, -20 ... 0 mA, -20 mA ... +20 mA *)</b>
<b>PCD2.W110**</b>	<b>4 analogue inputs 12 bit, Pt 100</b>
<b>PCD2.W111**</b>	<b>4 analogue inputs 12 bit, Ni 100</b>
<b>PCD2.W112**</b>	<b>4 analogue inputs 12 bit, Pt 1000</b>
<b>PCD2.W113**</b>	<b>4 analogue inputs 12 bit, Ni 1000</b>

<b>PCD2.W220</b>	<b>8 analogue inputs 10 bit, Pt/Ni 1000</b>
<b>PCD2.W220Z02</b>	<b>8 analogue inputs 10 bit, NTC 10</b>
<b>PCD2.W220Z12</b>	<b>8 analogue inputs 10 bit, 4 × 0 ... 10 V, 4 × Pt/Ni 1000</b>
<b>PCD2.W300</b>	<b>8 analogue inputs 12 bit, 0 ... 10 V</b>
<b>PCD2.W310</b>	<b>8 analogue inputs 12 bit, 0 ... 20 mA</b>
<b>PCD2.W340</b>	<b>8 analogue inputs 12 bit, 0 ... 10 V, 0 ... 20 mA, Pt/Ni 1000 *)</b>
<b>PCD2.W350</b>	<b>8 analogue inputs 12 bit, Pt/Ni 100</b>
<b>PCD2.W360</b>	<b>8 analogue inputs 12 bit, resolution &lt; 0.1 °C, Pt 1000</b>

\*) jumper selectable

\*\*) no longer available

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.8.1 PCD2.W10x, analogue inputs, 4 channels, 12 bit resolution

High-speed module for general use for recording analogue signals with a conversion time of  $\leq 30 \mu\text{s}$  and a resolution of 12 bits.

#### Module overview

PCD2.W100                      4 channels for signals 0 ... 10 V  
 Unipolar\*):      0 V ... +10 V or -10 V ... 0 V  
 Bipolar\*):        -10 V ... +10 V  
 Input resistance: >10 M $\Omega$

PCD2.W105                      4 channels for signals 0 ... 20 mA  
 Unipolar\*):      0 ... +20 mA or -20 ... 0 mA  
 Bipolar \*):       -20 mA ... +20 mA  
 Circuit resistance (Rshunt): 100  $\Omega$ /0.1 %

\*) Unipolar - bipolar, switchable with jumper

#### Technical data

Signal ranges	see module overview	
Galvanic separation	no	
Resolution (digital representation)	12 bits (0 ... 4095)	
Measuring principle	differential	
Conversion time	$\leq 30 \mu\text{s}$	
Input resistance	W100: >10 M $\Omega$	W105: 100 $\Omega$ /0.1 %
Accuracy at 25 °C (of measured value)	W100: $\pm 0.1 \%$ W100: $\pm 0.05 \%$ W105: $\pm 0.2 \%$	+ $\pm 1$ LSB bipolar + $\pm 1$ LSB unipolar + $\pm 1$ LSB unip/bip.
Repeating accuracy	$\pm 1$ LSB	
Common mode range (CMR)	W100: $\pm 11$ V	W105: $\pm 8$ V
Common mode rejection (CMRR)	> 70 dB	
Temperature error (0 ... +55 °C)	W100: $\pm 0.2 \%$ + $\pm 2$ LSB W105: $\pm 0.3 \%$ + $\pm 2$ LSB	
Overvoltage protection (W100)	$\pm 60$ VDC (permanent)

Internal current consumption: (from +5 V bus)	45 mA typ. 20 mA	
Internal current consumption: (from V+ bus)	15 mA	
External current consumption:	0 mA	
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>	

Terminals

Moving the jumpers

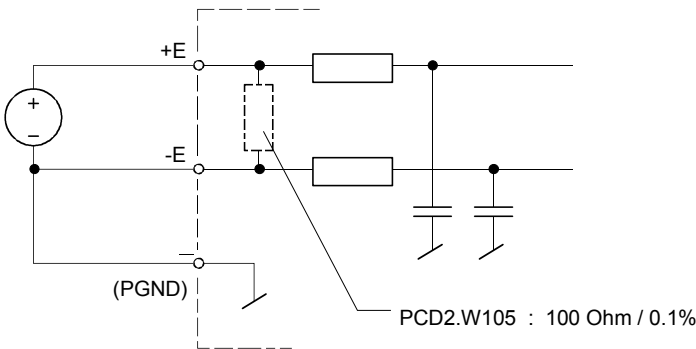

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, “Icons”](#).

Analogue/digital values

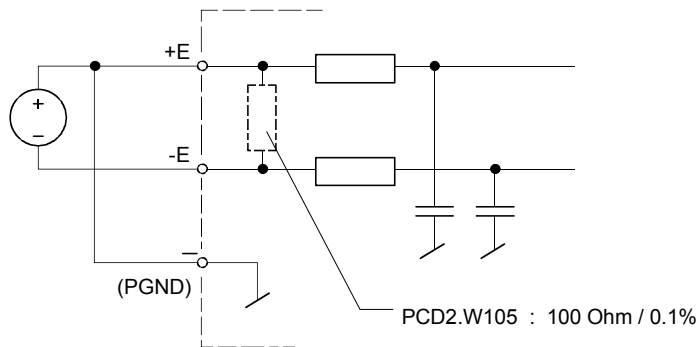

PCD2.W100 (voltage range 0...10 V)		
Unipolar positive	Unipolar negative	Bipolar
0 V → 0	0 V → 0	-10 V → 0
+5 V → 2047	-5 V → 2047	0 V → 2047
+10 V → 4095	-10 V → 4095	+10 V → 4095

PCD2.W105 (current range 0...20 mA)		
Unipolar positive	Unipolar negative	Bipolar
0 mA → 0	0 mA → 0	-20 mA → 0
+10 mA → 2047	-10 mA → 2047	0 mA → 2047
+20 mA → 4095	-20 mA → 4095	+20 mA → 4095

Wiring for positive unipolar or bipolar analogue inputs

### Wiring for negative unipolar analogue inputs

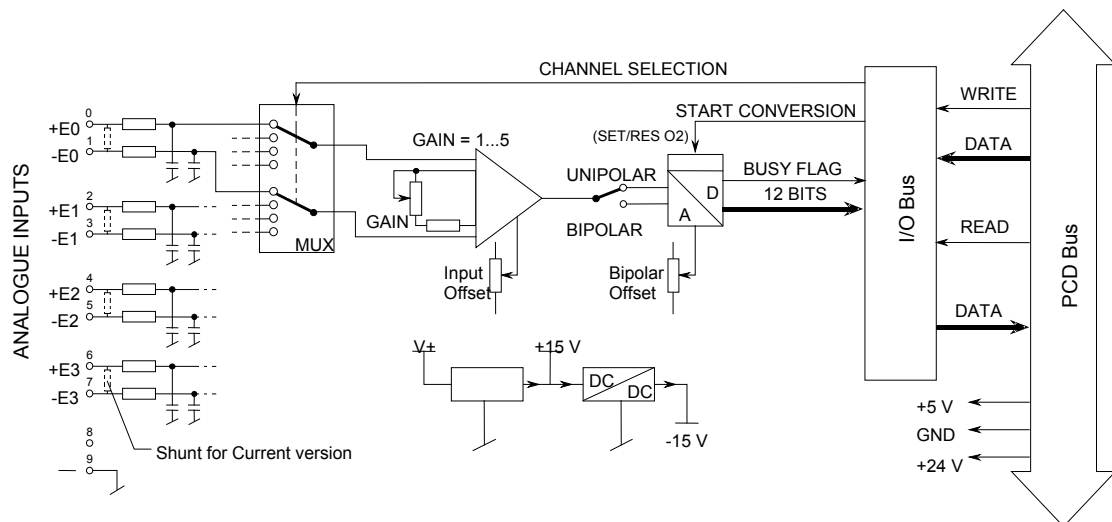

5

All unused inputs must be earthed.

### Output circuits and terminal designation

### Programming

Classic: [Programming examples](#) for the PCD2.W10x can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).  
xx7: the firmware reads in the values according to the configuration (I/O Builder)

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.8.2 PCD2.W11x, analogue inputs, 4 channels, 12 bit resolution

### for resistive temperature sensors Pt/Ni 100, 1000

High-speed, convenient module for recording absolute temperatures in the range -50 ... +150 °C or +350 °C (W114) using a resistive temperature sensor. (2-wire connection with zero adjustment) The temperature curves are linearized in the module itself. The resolution is 12 bits.

#### Module overview

PCD2.W110	4 analogue inputs for temperature measurement with Pt 100 probes (IEC 751)
PCD2.W111	4 analogue inputs for temperature measurement with Ni 100 probes (DIN 43 760)
PCD2.W112	4 analogue inputs for temperature measurement with Pt 1000 probes (IEC 751)
PCD2.W113	4 analogue inputs for temperature measurement with Ni 1000 probes (DIN 43 760)
PCD2.W114	4 analogue inputs for temperature measurement with Pt 100 probes (IEC 751)

5

#### Technical data

Number of channels	4
Galvanic separation	no
Resolution (digital representation)	12 bits (0 ... 4095)
Measuring principle	differential
Conversion time	< 30 µs
Time between 2 measurements	≥ 1 ms
Temperature error:	+10 ... +30 °C    max. ± 0.4 °C 0 ... +55 °C    max. ± 1 °C
Repeating accuracy (multiple measurements with the same module under the same conditions)	± 2 LSB
Probe type	2-wire
Linearization	integrated
Current sources	1 per channel
Offset setting (allows zero value to be adjusted according to length of cable)	separate for each channel
Sensitivity	20.475 LSB/°C (4095 ... 200) or 0.0488 °C/LSB (200 ... 4095)
Internal current consumption: (from +5 V bus)	45 mA typ. 20 mA
Internal current consumption: (from V+ bus)	30 mA (W110/W111) 20 mA (W112/W113/W114)
External current consumption:	0 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

**Technical data for add-on modules (variant modules)**

**PCD2.W110**                      4 inputs for Pt 100 probes  
 Current sources                2 mA  
 Measuring range               -50 °C ... +150 °C  
 Accuracy of measurement       better than 0.2 °C

**PCD2.W111**                      4 inputs for Ni 100 probes  
 Current sources                2 mA  
 Measuring range               -50 °C ... +150 °C  
 Accuracy of measurement       better than 0.4 °C

**PCD2.W112**                      4 inputs for Pt 1000 probes  
 Current sources                0.2 mA  
 Measuring range               -50 °C ... +150 °C  
 Accuracy of measurement       better than 0.2 °C

**PCD2.W113**                      4 inputs for Ni 1000 probes  
 Current sources                0.2 mA  
 Measuring range -               -50 °C ... +150 °C  
 Accuracy of measurement       better than 0.4 °C

**PCD2.W114**                      4 inputs for Pt 100 probes  
 Current sources                0.2 mA  
 Measuring range               0 °C ... +350 °C  
 Accuracy of measurement       better than 0.4 °C

**Accuracy of measurements**

The curves below show the maximum measurement error (measurement and repeating accuracy).

Total error = linearization error + repeating error

Each channel is calibrated to the minimum and maximum values:

-50 °C	→	0	+ 2 LSB
+150 °C	→	4095	- 2 LSB

For these two values, the measurement error = 0.

**Typical linearity error for W110/112/114 (Pt 100/Pt 1000)**

5

**Typical linearity error for W111/113 (Ni 100/Ni 1000)**

On cable break	→	Measurement	4095
On short circuit	→	Measurement	0

**Base and variant modules**

Each module comprises 2 individual modules.

- Base module with input filters, A/D converter, I/O port. Same module with same fittings for all 4 variants.
- Plug-on variant modules with switching circuit to generate -15 V, power sources and linearization. Each of the four variants has a module of its own, i.e. a module with different equipment.

The user has access to the 4 potentiometers to set the offset for each individual channel. This can be useful for adjusting the zero value (at -50 °C) for long measurement cables.

All modules are set up in pairs (base and variant module) at the factory. The variant modules must **not** be exchanged.

The 4 built-in potentiometers for setting the amplification are not accessible to the user and must **not** be adjusted.

5

## Terminals

### Basic module

### Substitution module

The negative terminals for each input are connected to the ground.

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

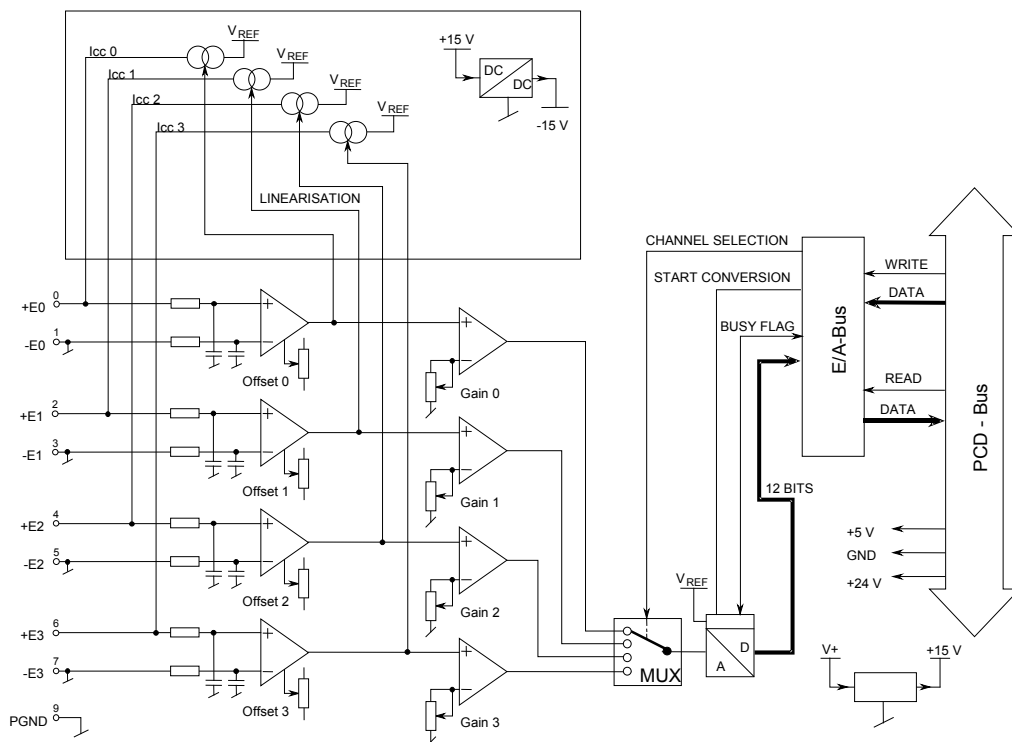

## Wiring

All unused inputs must be short-circuited: +I to -I in each case

5

## Output circuits and terminal designation

## Programming

Classic: [Programming examples](#) for the PCD2.W11x can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).  
xx7: the firmware reads in the values according to the configuration (I/O Builder)

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.8.3 PCD2.W2x0, analogue inputs, 8 channels, 10 bit resolution

#### Application

With its short conversion time of <50 µs, this module is universally suitable for recording analogue signals. The only limitations are with weak signals, as with Pt 100 resistive temperature sensors, or with thermocouples.

#### Module overview

PCD2.W200	8 channels for signals 0... 10 V
PCD2.W210	8 channels for signals 0... 20 mA
PCD2.W220	8 channels for resistive temperature sensors Pt/Ni 1000
PCD2.W220Z02	8 channels for NTC10 temperature sensors
PCD2.W220Z12	4 channels for signals 0... 10 V
	4 channels for resistive temperature sensors Pt/Ni 1000

5

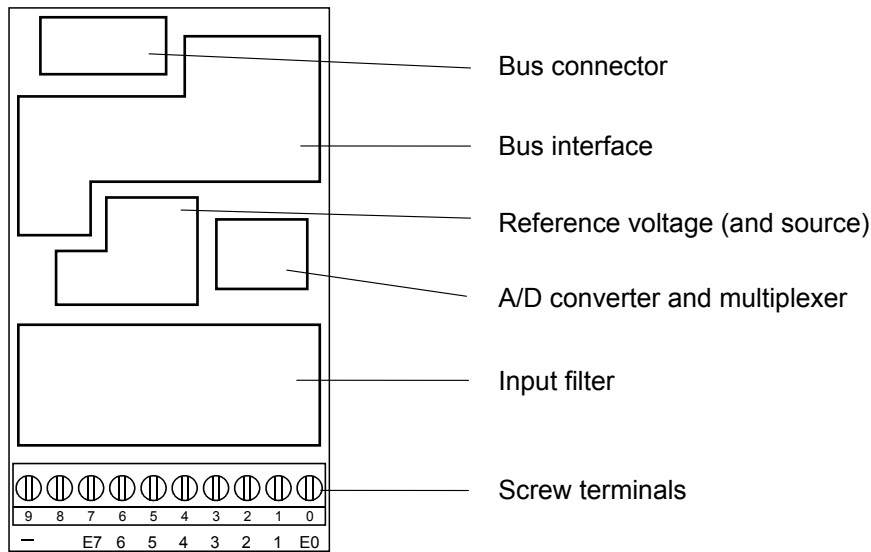

#### Technical data

Signal ranges:	see module overview	
Galvanic separation:	no	
Resolution (digital representation):	10 bits (0... 1023)	
Measuring principle:	non-differential, single-ended	
Input resistance:	0... 10 V:	80 kΩ / 0.15 %
	0... 20 mA:	125 Ω / 0.1 %
	Pt/Ni 1000:	7.5 kΩ / 0.1 %
	NTC 10:	10 kΩ / 0.1 %
Maximum signal current for the resistance measurement with W220:	1.5 mA	
Accuracy: (of measured value)	± 3 LSB	
Repeating accuracy: (under same conditions)	within 1 LSB	
Temperature error:	± 0.3 % ( ± 3 LSB), (over temperature range from 0°...+55 °C)	
Conversion time A/D:	<50 µs	
Overvoltage protection:	W200/220:	± 50 VDC
Overcurrent protection:	W210:	± 40 mA
Burst protection: (IEC 1000-4-4)	± 1 kV, with unshielded cables ± 2 kV, with shielded cables	
Time constant of input filter:	W200: typically 5 ms W210: typically 1 ms W220 : typically 10 ms	
Internal current consumption: (from +5 V bus)	8 mA (W200/210/220)	
Internal current consumption: (from V+ bus)	5 mA (W200/210) 16 mA (W220)	
External current consumption:	0 mA	
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²	

A signal with wrong polarity at an input, may cause that the measuring results at the other channels are significantly falsified.

Terminals

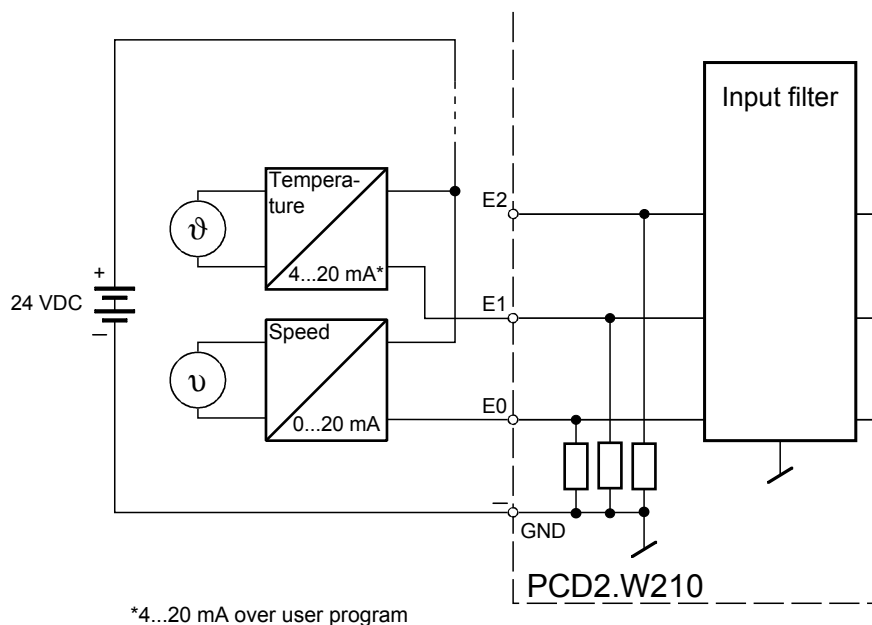

Digital/analogue values

Input signals and type			Digital values		
PCD2.W200	PCD2.W210	PCD2.W220	Classic	xx7	Simatic
+ 10.0 V	+ 20 mA	Calculate the appropriate values with the formulae at the end of this section	1023	1023	27648
+ 5.0 V	+ 10 mA		512	512	13824
	+ 4 mA		205	205	5530
0 V	0 mA		0	0	0

### Connection concept PCD3.W220Z02 NTC10

Connection concept PCD2.W220Z12  
4 × 0...10 V and 4 × Pt1000 / Ni1000

**Block diagram**

5

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M170), because it would interact with the watchdog, and would cause a malfunction.

Classic

Programming examples for the PCD3.W2x0 can be found in a separate manual and on the TCS Support site [www.sbc-support.com](http://www.sbc-support.com).

xx7

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator).

!

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

**Temperature measurement with Pt1000**

In the temperature range – 50 °C to + 200 °C, the following formulae can be used for working to an accuracy of ± 1 % (± 1.5 °C). Repeating accuracy is significantly higher.

$$T[^\circ\text{C}] = \frac{DV}{2.08 - (0.509 \cdot 10^{-3} \cdot DV)} - 261,8$$

T=temperature in °C

DV=digital value (0...1023)

Example 1: digital value DV=562  
temperature T in °C ?

$$T[^\circ\text{C}] = \frac{562}{2.08 - (0.509 \cdot 10^{-3} \cdot 562)} - 261,8 = \underline{51.5^\circ\text{C}}$$

5

---

$$DV = \frac{2.08 \cdot (261.8 + T)}{1 + (0.509 \cdot 10^{-3} \cdot (261.8 + T))}$$

DV=digital value (0... 1023)

T=temperature in °C

Example 2: preset temperature T = –10 °C  
corresponding digital value DV ?

$$DV = \frac{2.08 \cdot (261.8 - 10)}{1 + (0.509 \cdot 10^{-3} \cdot (261.8 - 10))} = \underline{464}$$

**Resistance measurement up to 2.5 kΩ**

Special temperature sensors or any other resistances up to 2.5 kΩ can be connected to the PCD2.W220. The digital value can be calculated as follows:

$$DV = \frac{4092 \cdot R}{(7500 + R)}$$

where  $0 \leq DV \leq 1023$  and R=the resistance to be measured in Ω.

## 5.8.4 PCD2.W3x0, analogue inputs, 8 channels, 12 bit resolution

### Application

High-speed input module for general use with 8 channels, each with 12 bit resolution. Different variants for voltage 0...10 V, current 0...20 mA and the use of different resistance thermometers are available.

### Module overview

resolution \*)

PCD2.W300:	Voltage 0...10 V	2.442 mV
PCD2.W310:	Current 0...20 mA	4.884 µA
PCD2.W340:	General purpose module	
	0...10 V	2.442 mV
	0...20 mA	4.884 µA
	Pt/Ni 1000 (default)	
	Pt 1000: -50...+400 °C	0.14...0.24 °C
	Ni 1000: -50...+200 °C	0.09...0.12 °C

Time constant of input filter:	W300: typically 10.5 ms W310: typically 12.4 ms W340 V: typically 7.8 ms C: typically 24.2 ms T: typically 24.2 ms W350: typically 16.9 ms W360: typically 16.9 ms
Internal current consumption: (from +5 V bus)	< 8 mA for all module types
Internal current consumption: (from V+ bus)	W300, 310 < 5 mA W340, 360 < 20 mA W350 < 30 mA
External current consumption:	0 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²
*) No negative input voltage should be applied on these modules.	

Terminals

Jumper positions for selecting working mode

PCD2.W340 only; on the other module types the working modes are fixed

All inputs set for temperature (position T) must be wired. All unused inputs (with the W340) must be adjusted to current range 'C' or voltage range 'V'.

Changing the jumpers

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

Digital/analogue values

Input signals and type			Digital values		
PCD2.W300/W340	PCD2.W310/W340	PCD2.W340/50/60	Classic	xx7	Simatic
+ 10.0 V	+ 20 mA	Calculate the appropriate values with the formulae at the end of this section	4095	4095	27684
+ 5.0 V	+ 10 mA		2047	2047	13824
0 V	0 mA		0	0	0

Connection concept for voltage and current inputs

The voltage and current input signals are connected directly to the 10-pole terminal block (E0...E7). To minimize the amount of interference coupled into the module via the transmission lines, connection should be made according to the principle explained below.

5

The following connection diagram shows a typical wiring layout for:

- voltage inputs with the PCD2.W300 and ... W340 Modules or
- current inputs with the PCD2.W310 and ... W340 Modules

- The reference potentials of signal sources should be wired to a common GND connection (“-” and “COM” terminals). To obtain optimum measurement results, any connection to an earthing bar should be avoided
- If shielded cables are used, the shield should be continued to an external earthing bar.

## Connection concept for temperature sensors

The input signals for the temperature sensors are connected directly to the 10-pole terminal block (E0...E7).

The following connection diagram shows a typical layout for temperature sensors with the PCD2.W340, ...W350 and ...W360 Modules.

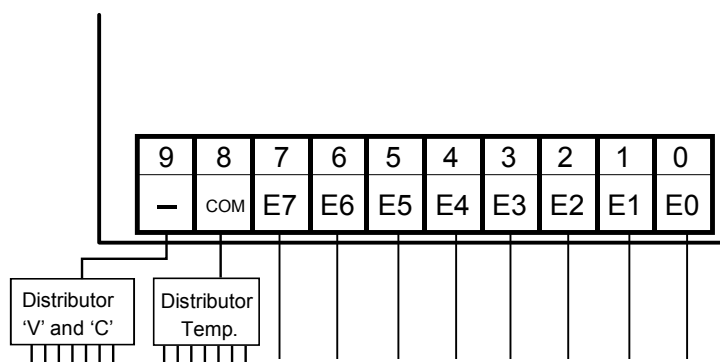

5

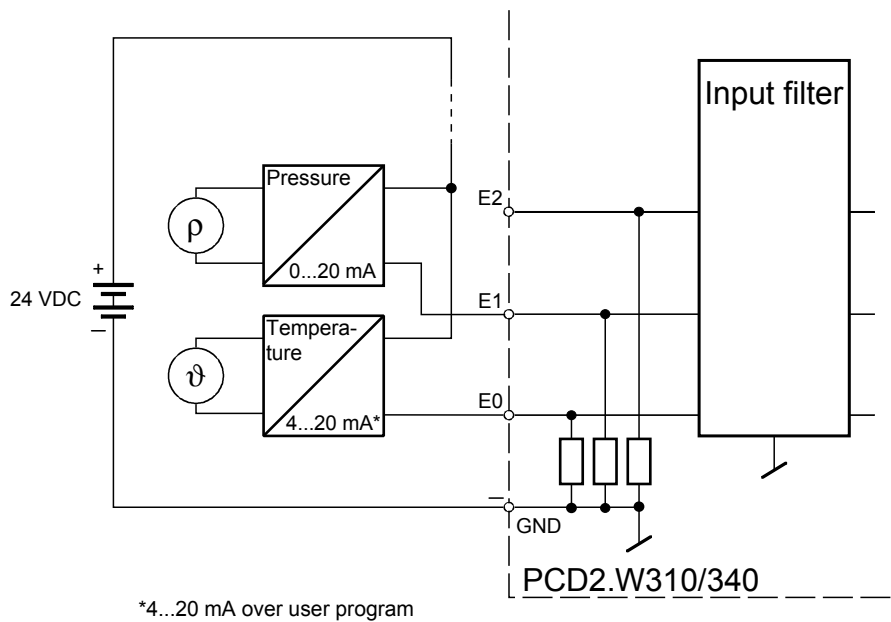

- The reference potential for temperature measurements is the “COM” terminal, which should not have any external earth or GND connection.
- If screened cables are used, screening should be continued to an external earthing bar.
- Unused temperature inputs are to be connected to the logical ground.

## Mixed operation

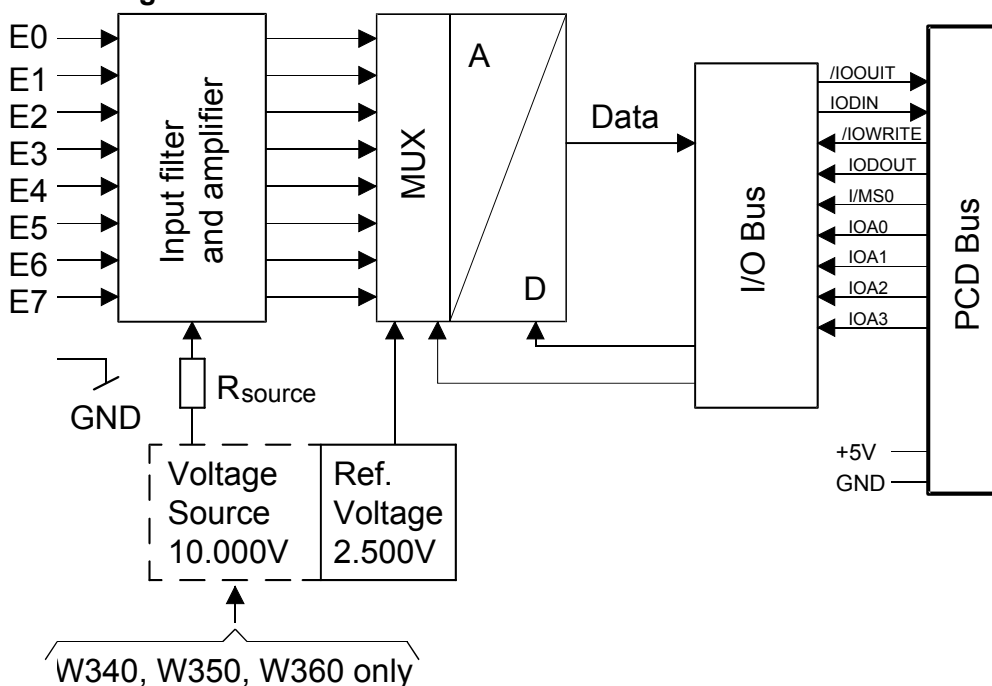

### Connection concept for two-wire transducers

5

Two-wire transducers need a 24 VDC-supply in the measuring trunk.

### Block diagram

### Programming

Classic: [Programming examples](#) for the PCD2.W3x0 can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).

xx7: the firmware reads in the values according to the configuration (I/O Builder)

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

**Formulae for temperature measurement****For Ni 1000 (PCD2.W340)**

Validity: Temperature range - 50...+ 210 °C

Computational error: ± 0.5 °C

$$T = -188.5 + \frac{260 \cdot DV}{2616} - 4.676 \cdot 10^{-6} \cdot (DV - 2784)^2$$

**For Pt 1000 (PCD2.W340)**

Validity: Temperature range - 50...+400 °C

Computational error: ± 1.5 °C

$$T = -366.5 + \frac{450 \cdot DV}{2474} + 18.291 \cdot 10^{-6} \cdot (DV - 2821)^2$$

5

**Resistance measurement up to 2.5 kΩ (PCD2.W340)**

Special temperature sensors or any other resistances up to 2.5 kΩ can be connected to the PCD2.W340. The digital value can be calculated as follows:

$$DV = \frac{16380 \cdot R}{(7500 + R)}$$

where  $0 \leq DV \leq 4095$  and  $R$ =the resistance to be measured in Ω.

**For Ni 100 (PCD2.W350)**

Validity: Temperature range - 50...+250 °C

Computational error: ± 1.65 °C

$$T = -28.7 + \frac{300 \cdot DV}{3628} - 7.294 \cdot 10^{-6} \cdot (DV - 1850)^2$$

**For Pt 100 (PCD2.W350)**

Validity: Temperature range - 50...+600 °C

Computational error: ± 1 °C

$$T = -99.9 + \frac{650 \cdot DV}{3910} + 6.625 \cdot 10^{-6} \cdot (DV - 2114)^2$$

**For Pt 1000 (PCD2.W360)**

Validity: Temperature range - 50...+150 °C

Computational error: ± 0.25 °C

$$T = -178.1 + \frac{200 \cdot DV}{2509} + 3.873 \cdot 10^{-6} \cdot (DV - 2786)^2$$

T = temperature

DV = digital value

## 5.9 Analogue input modules with electrical isolation

PCD2.W305	7 analogue inputs 12 bit resolution, 0 ... 10 V
PCD2.W315	7 analogue inputs 12 bit resolution, 0 ... 20 mA
PCD2.W325	7 analogue inputs 12 bit resolution, -10 V ... +10 V

Galvanic separation of outputs to Saia PCD®, channels themselves not separated

5

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.9.1 PCD2.W3x5, analogue inputs, 7 channels, 12 bit resolution, electrical isolated

#### Application

High-speed input module with galvanic separation of outputs to Saia PCD® bus, for general use with 7 channels, each with 12 bit resolution. Different variants for voltage 0...10 V, -10 V...+10 V and current 0...20 mA are available.

#### Module overview

#### resolution \*)

PCD2.W305:	Voltage 0...10 V	2.5 mV

\*) The exact values are 1/255 higher

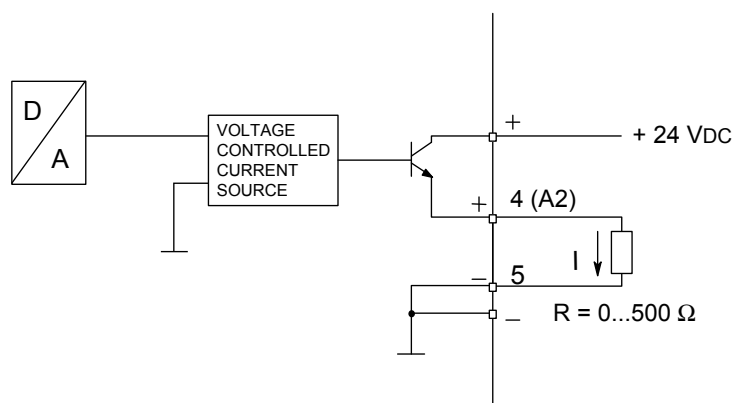

Changing the jumpers

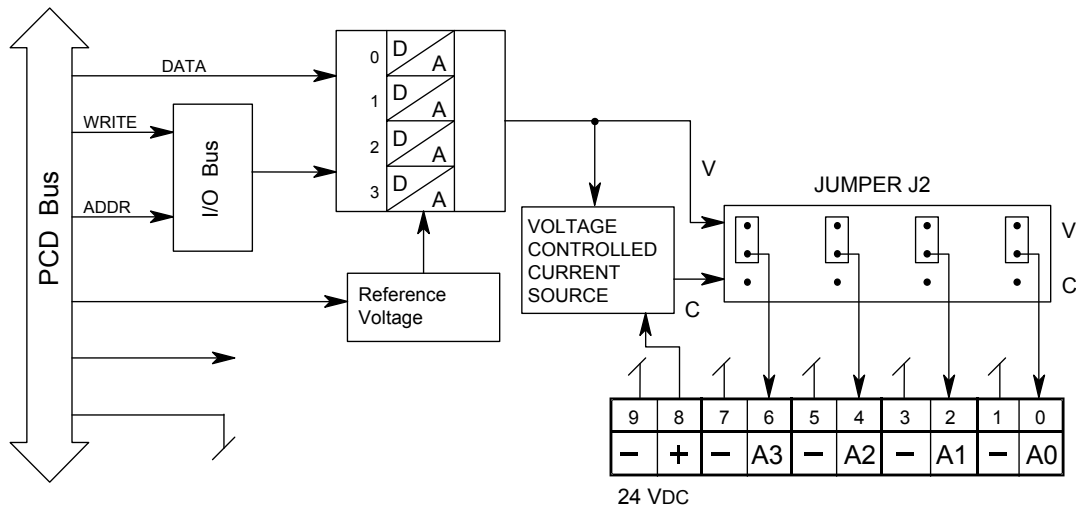

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

**Connection concept****Connection for 0...10 V**

5

**Connection for 0...20 mA or 4...20 mA**  
(selectable with jumpers on type PCD2.W410)

An external 24 VDC  
supply is required for  
current outputs

**Block diagram**

5

**Programming**

Classic: [Programming examples](#) for the PCD2.W4x0 can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).

xx7: the firmware writes the values according to the configuration (I/O Builder)

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.10.2 PCD2.W6x0, analogue outputs, 4 channels, 12 bit resolution

#### Application

High-speed output module for general use with 4 channels, each with 12 bit resolution. Different variants for voltage 0...10 V, -10...+10 V and current 0...20 mA are available.

#### Module overview

PCD2.W600: Unipolar voltage outputs 0...10 V  
 PCD2.W610: Bipolar voltage outputs -10 V...+10 V, switch-  
 able to unipolar voltage 0...10 V /  
 current 0...20 mA

5

#### Technical data

#### resolution

Number of output channels:	4, short circuit protected		
Signal range:	W600: 0...+10 V	2.442 mV	} selectable with jumper
	W610: -10 V...+10 V	4.884 mV	
	0...+10 V	2.442 mV	
	0...20 mA	4.884 $\mu$ A	
Galvanic separation:	no		
Resolution (digital representation):	12 bits (0...4095)		
Conversion time D/A:	typ. 10 $\mu$ s		
Load impedance	Voltage:	> 3 k $\Omega$	
	Current:	< 500 $\Omega$	
Accuracy at 25 °C (of output value)	Voltage:	$\pm$ 0.5 %	
	Current:	$\pm$ 0.8 % *)	
Temperature error:	Voltage:	$\pm$ 0.1 % (across temperature	
	Current:	$\pm$ 0.2 % range 0...+55 °C)	
Internal current consumption: (from +5 V bus)	W600:	max. 4 mA	
	W610:	max. 110 mA	
Internal current consumption: (from V+ bus)	W600:	max. 20 mA	
	W610:	0 mA	
External current consumption:	max. 100 mA (type PCD2.W610 only, for current outputs)		
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>		

\*) Note on current outputs:

Since for some applications it is important to be able to reach the outside limit values of the range (0 mA, 20 mA), current outputs have been laid out according to the following characteristic line:

During the start, a voltage of 5 V will be at all outputs of the module PCD2.W600. The starting phase lasts 40 ms, afterwards 0 V will be put to the outputs.

Terminals

Digital/analogue values

Digital values			Output signals
Classic	xx7	Simatic	
4095	4095	27648	+20.1 mA
4075	4075	27513	+20 mA
2048	2048	13824	+10 mA
20	20	135	0 mA
0	0	0	0 mA

### Changing the jumpers

There are components on this circuit board, that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

#### Range selection (PCD2.W610)

Jumpers, factory settings:	A0...A3:	"V"	(voltage)
	U/B:	"B"	(bipolar)
	Reset select:	"mid"	(reset to mid-scale, i.e. 0 V in bipolar mode)

Ranges depending on application:

Per module:	U/B:	Unipolar or <b>B</b> ipolar operation
	Reset select:	Reset to <b>low</b> - or <b>mid</b> -scale
	Rec. setting:	Unipolar → low-scale
		Bipolar → mid-scale

Per channel:	"V"	Voltage output:	
		0...+10 V or -10 V...+10 V	
	"C":	Current output:	0...20 mA

5

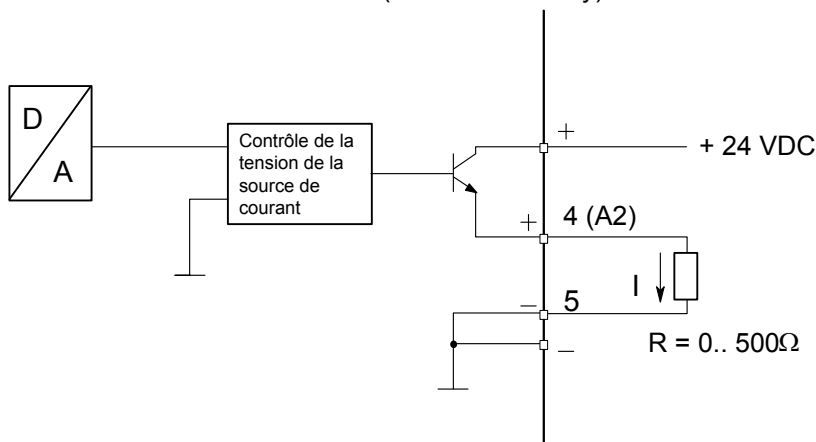

Current outputs have been laid out for unipolar mode. Bipolar mode is possible, but for the negative half of this operation the output is 0 mA.

### Connection concept

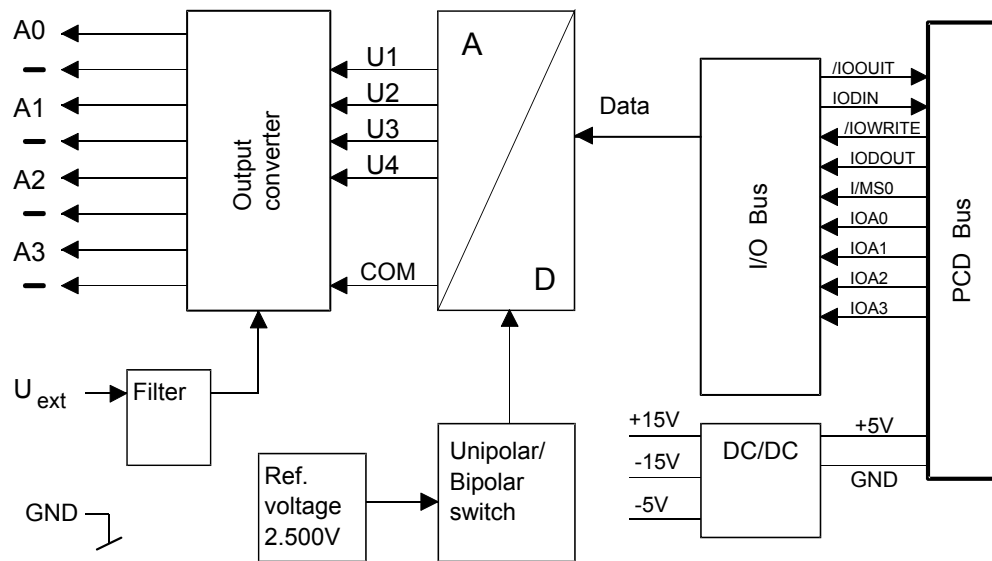

**Connection for 0...10 V or -10 V...+10 V:** (selectable on the PCD2.W610)

**Connection for 0...20 mA:** (PCD2.W610 only)

An external 24 VDC supply is required for current outputs.

**Block diagram**

5

**Programming**

Classic: [Programming examples](#) for the PCD2.W6x0 can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).  
 xx7: the firmware writes the values according to the configuration (I/O Builder)

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

	*E.g.	RL=500 Ω → Ue =	20... 30 V
		RL=0 Ω → Ue=	10... 20 V
Terminals:	Pluggable 14-pole spring terminal block (4 405 4998 0), for wires up to 1.5 mm²		

Terminals

5

Digital/analogue values

Output signals and type			Digital values		
PCD2.W605	PCD2.W615	PCD2.W625	Classic	xx7	Simatic
+ 10.0 V	+ 20 mA	+10 V	1023	1023	27684
+ 5.0 V	+ 10 mA	0 V	512	512	13842
	+ 4 mA		205	205	5530
0 V	0 mA	-10 V	0	0	0

Notes on the output range

Balancing the offset and the amplification is done for the PCD2.W6x5 digitally by the  $\mu$ C. As there is no potentiometer, the output range has been slightly enlarged to cover maximum values even in the worst case.

Typical output range (without component tolerances):

W605: - 0.26 V ... + 10.36 V (instead of 0 ... + 10 V)

W615: 0 mA ... 21.4 mA (instead of 0 ... 20 mA)

W625: - 10.62 V ... 10.36 V (instead of - 10 ... +10 V)

This range is broken down on a 10 bit scale (1024 steps), as before. The result is the following LSB resolution:

W605: 1 LSB = 10.38  $\mu$ V

W615: 1 LSB = 21.7  $\mu$ A

W625: 1 LSB = 20.75  $\mu$ V

With this balance the nominal range (0 ... 10 V) is now scaled 0 ... 1023, making it possible for the output value not to change on an increase of 1 LSB.

In the FBs the output values are not limited to 0...1023, so the whole range of the module can be used.

For voltages > 10 V or currents > 20 mA, values >1023 may be output, and for voltages < 0 V or

< -10 V, negative values may be output. (With the W615 it is not possible to output negative currents).

This extended range does depend on the tolerances of the components, and cannot be guaranteed.

### Connection concept for voltage and current outputs

5

The voltage and current output signals are connected directly to the 14-pole terminal block (A0...A5 / A3 and -).

The following connection diagram shows a typical wiring layout for:

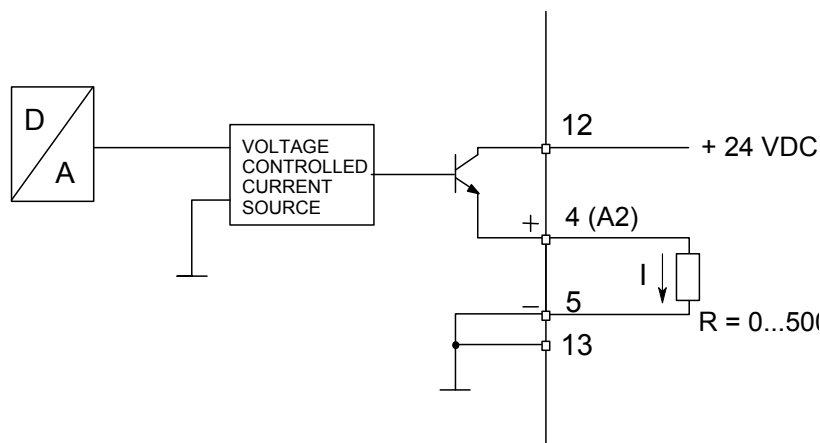

- voltage outputs with the PCD2.W605 and .W625 modules or
- current outputs for the PCD2.W615 module

#### Connection for 0...10 V (W605) or -10 V...+10 V (W625):

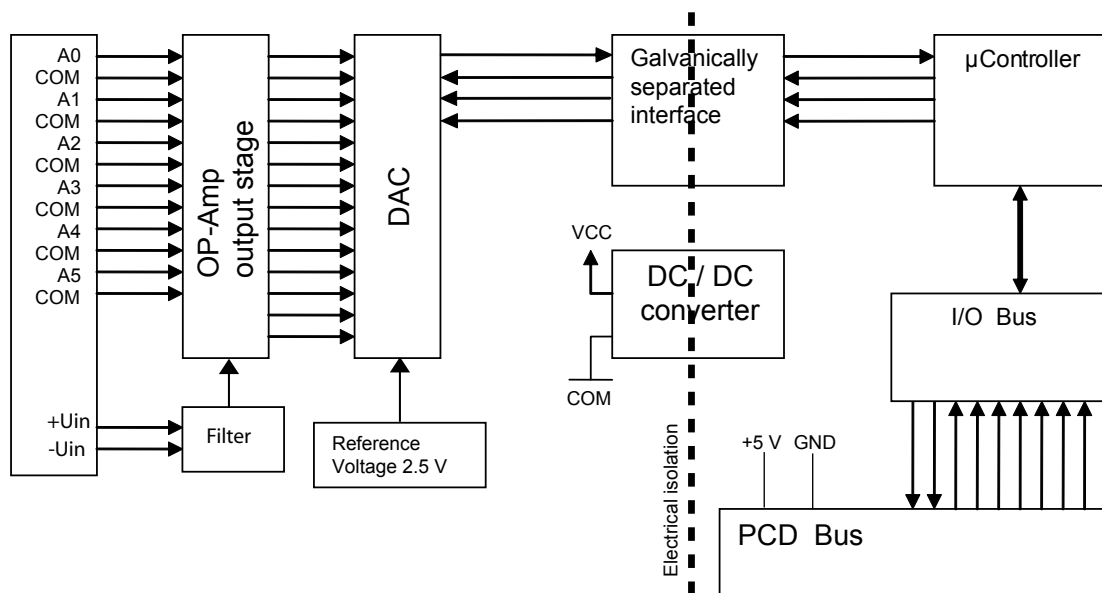

For voltage outputs no external supply is needed.

#### Connection for 0...20 mA (W615)

An external 24 VDC supply is required for current outputs.

**Block diagram****Programming**

Classic: For programming the modules, an FBox is available.

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator)

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.12 Analogue input and output modules

<b>PCD2.W500</b>	<b>2 analogue inputs 12 bit + 2 analogue outputs 12 bit, 0 ... 10 V, -10 V ... +10 V *)</b>
<b>PCD2.W510</b>	<b>2 analogue inputs 12 bit + 2 analogue outputs 12 bit, 0 ... +20 mA, -20 ... +20 mA *)</b>

\*) jumper selectable

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.12.1 PCD2.W5x0, analogue inputs/outputs, 2 + 2 channels, 12 bit resolution

#### Application

Combined high speed analogue input/output module with 2 voltage inputs and 2 voltage outputs 0...+10 V (unipolar) or -10...+10 V (bipolar), jumper selectable, all with 12 bit resolution. The module is suitable for precise, high-speed applications.

#### Module overview

PCD2.W500: Combined high-speed analogue input/output module with 2 voltage inputs and 2 voltage outputs 0...+10 V (unipolar) or -10...+10 V (bipolar), jumper selectable (standard module).

PCD2.W510: Module with 2 current inputs and 2 voltage outputs (special version)

#### Technical data

Inputs	
Number of input channels:	2
Signal ranges	W500: 0...+10 V } -10...+10 V } jumper selectable together W510: 0...+20 mA } -20...+20 mA } jumper selectable together
Galvanic separation:	no
Measuring principle:	differential
Conversion time A/D:	< 30 µs
Resolution (digital representation):	12 bits (0...4095)
Input resistance:	0...+10 V : 1 MΩ 0...+20 mA: 100 Ω
Accuracy (of measured value):	unipolar: ± 2 LSB bipolar: ± 10 LSB
Repeating accuracy (under same conditions):	± 2 LSB
Common mode range:	CMR ± 10 V
Common mode rejection:	CMRR ≥ 75 dB
Overvoltage protection:	± 40 VCC (permanent)
Time constant of input filter:	3 ms
Outputs	
Number of output channels:	2, short circuit protected
Signal ranges:	0...+10 V } -10...+10 V } jumper selectable individually
Galvanic separation:	no
Conversion time D/A:	< 20 µs
Resolution (digital representation):	12 bits (0...4095)
Load impedance:	> 3 kΩ
Accuracy (of output value):	0.3 % ± 20 mV

#### Technical data common to the whole module

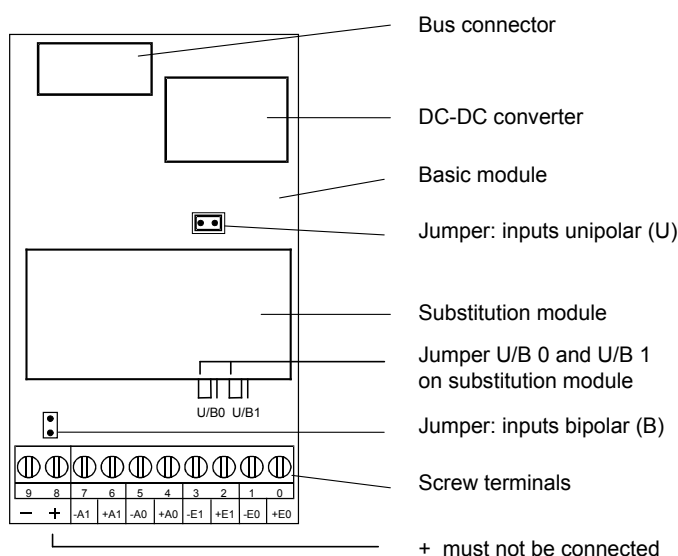

Burst protection: (IEC 801-4)	± 1 kV, with unshielded cables ± 2 kV, with shielded cables
Temperature error	0.3 % (across temperature range 0...+55 °C)
Internal current consumption:(from +5 V bus)	max. 200 mA

Internal current consumption: (from V+ bus)	0 mA
External current consumption:	0 mA
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

As the current consumption of this module is considerable, when using a number of them in the same system, the total load for all modules must be taken into consideration..

### Terminals

5

The negative terminals “–” of outputs are connected internally to the ground, each via a 100 Ω resistor.

### Analogue/digital values

#### Inputs

Input signals	Digital values					
	Classic		xx7		Simatic	
	unipolar	bipolar	unipolar	bipolar	unipolar	bipolar
+10 V	4095	4095	4095	4095	27648	27648
+5 V	2047	3071	2047	3071	13824	13824
0 V	0	2047	0	2047	0	0
-5 V	0	1023	0	1023	0	-13824
-10 V	0	0	0	0	0	-27648

#### Outputs

Digital values			Output signals	
Classic	xx7	Simatic	unipolar	bipolar
4095	4095	27648	+10.0 V	+10.0 V
3071	3071	20736	+7.5 V	+ 5.0 V
2047	2047	13824	+5.0 V	0 V
1023	1023	6912	+2.5 V	-5.0 V
0	0	0	0 V	-10.0 V

**PCD2.W500 Module, fully equipped**

(with additional module plugged on)

Apart from the bus connector, DC-DC converter and terminals, the base module carries the two input channels with the 2-pole jumper for unipolar or bipolar operation and a number of preset potentiometers, which cannot be adjusted by the user.

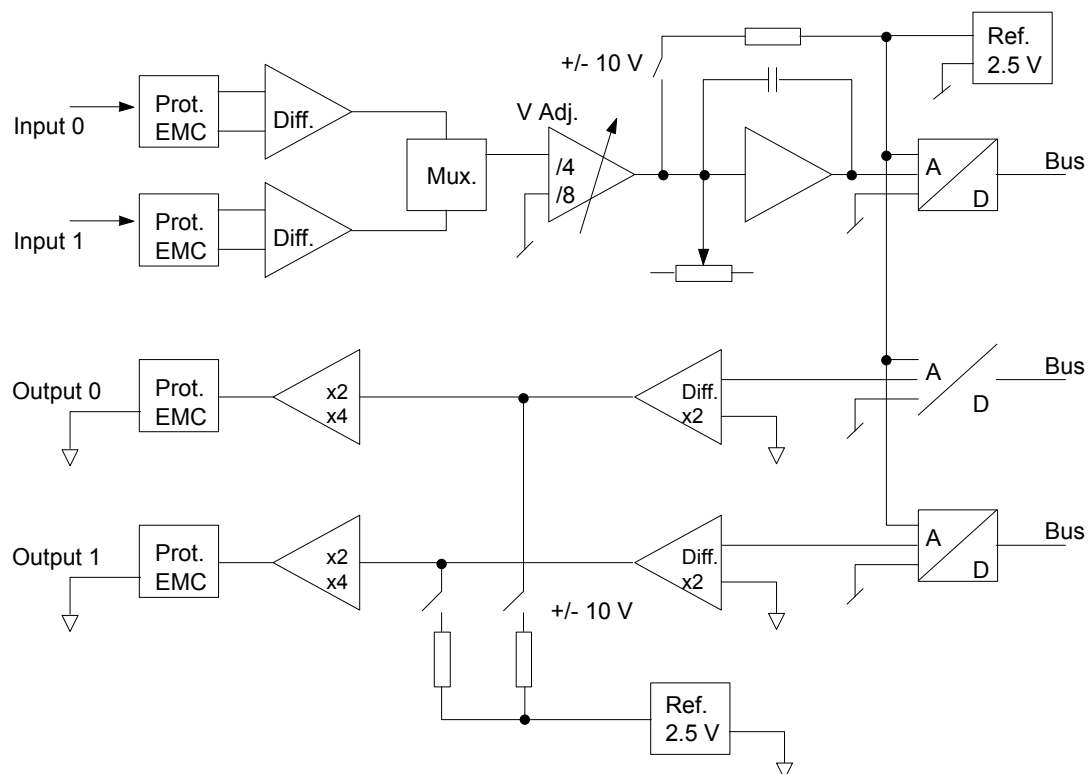

The plug-on module contains the two analogue outputs with the two 3-pole jumpers for the individual unipolar or bipolar operation of each output.

The module also works without the plug-on module.

**Changing the jumpers**

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

5

**Block diagram****Programming****Reset**

When the module or CPU powers up, both analogue outputs of the PCD2.W500 Module are set at the maximum value of +10 V (or a random value between 0 and +10 V). If this should cause problems, XOB 16 (the cold-start routine) should be used to initialize both these outputs to zero or any desired cold-start value.

If the debugger is connected or the P100 handheld service device is plugged in, there is no cold-start when the CPU supply switches on. Both analogue outputs of the PCD2.W500 are then set to the maximum value of +10 V, despite the reset routine.

Classic: [Programming examples](#) for the PCD2.W500 can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).  
xx7: the firmware reads and writes the values according to the configuration (I/O Builder)

Watchdog: This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction. For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components

5

### 5.13 Combined analogue input/output modules with galvanic isolation

<b>PCD2.W525</b>	<b>4 inputs, 14 bits, 0...10 V, 0(4)...20 mA, Pt 1000, Pt 500 or Ni 1000 (selectable by DIP switch)  and  2 outputs, 12 bits, 0...10 V or 0(4)...20 mA (selectable by software (FBox, FB))</b>
------------------	--

5

Galvanic separation of outputs to Saia PCD®, channels themselves not separated

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.13.1 PCD2.W525 Combined analogue input/output modules with galvanic isolation

#### General Information

PCD2.W525 is an analogue multipurpose module with four inputs and two outputs. Each input and each output can be individually configured as one of the standard industrial interface type like 0...10 V, 0...20 mA and 4...20 mA. In addition, the inputs can be configured to support Pt/Ni1000 or Pt500 temperature sensors. Furthermore, the module offers high flexibility in selecting filter types and scaling ranges.

#### Inputs-14 Bit

- 4 Inputs. Every channel has four modes of operation (configurable by DIP-Switches):
  - **Differential Voltage Inputs**  
0...10 V, resolution: 0.61 mV per LSB (14 Bit)
  - **Differential Current Inputs**-measured in differential mode  
0...20 mA, resolution: 1.2 µA per LSB (14 Bit)  
4...20 mA, resolution: 1.2 µA per LSB (13.7 Bit)
  - **Temperature**  
Pt1000, -50...400 °C, resolution: 0.1 °C  
Pt500, -50...400 °C, resolution: 0.2 °C  
Ni1000, -60...200 °C, resolution 0.1 °C
  - **Resistance**  
0...2500 Ω, resolution 0.2 Ω
- Each channel can be configured to have a software based 50 Hz / 60 Hz filter

#### Outputs-12 Bit

- 2 Outputs. Every channel has three modes of operation (configurable by software):
  - **Voltage**  
0...10 V, resolution: 2.44 mV per LSB (12 Bit)
  - **Current**  
0...20 mA, resolution: 4.88 µA per LSB (12 Bit)  
4...20 mA, resolution 4.88 µA per LSB (11.7 Bit)
  - **High impedance**

#### Miscellaneous

- All I/O-Channels are galvanically isolated to the Saia PCD® and external power supply. (But all channels are galvanically connected to each other.)
- Every channel has two connection terminals.

Configuration

Module connections/LED

The connections of the module terminal are the following:

Supply		Outputs				Inputs							
13	12	11	10	9	8	7	6	5	4	3	2	1	0
-	+	-	+	-	+	-	+	-	+	-	+	-	+
U <sub>ext</sub>		A1		A0		E3		E2		E1		E0	

Description of the LED:

- Off: Module is not powered. U<sub>ext</sub> (24 V) is missing.
- On: Module is running without errors
- Blinking slow: Channel error (Over range/under range/short circuit/open load)
- Blinking fast: U<sub>ext</sub> is lower than specified (< 19 V)

How to configure the inputs

Each input channel is configured by a DIP-Switch with four switches. The function of each switch is the following:

Switch nr.	Off	On
1	Differential Mode	Single Ended Mode
2		Current Shunt On
3		Supply for external Resistors
4		Gain=0.25
	Gain=1	

According to this table, the configuration for the different modes of operation is as follows:

Voltage mode  
0...10 V

Current mode  
0...20 mA  
4...20 mA

Temperature mode  
Pt1000 (-50...400 °C)  
Pt500 (-50...400 °C)  
Ni1000 (-60...200 °C)  
Resistor mode  
0...2500 Ω

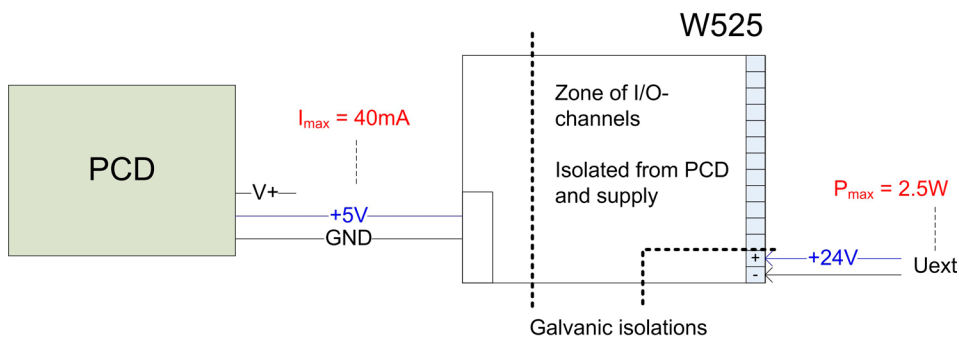

How to configure the outputs

Since the outputs are configured by software (with the corresponding FBox or FB), there is no need to configure the mode of operation of the outputs with any kind of jumpers or DIP-Switches.

## Function

### Power Supply

PCD2.W525 has to be supplied externally! This power supply is galvanically isolated to both, the Saia PCD® and the I/Os of W525. Furthermore, the design allows using the same power supply for the Saia PCD® and for W525 without losing the galvanic isolation. These schematics show the different zones of isolation:

5

## Timing

### Inputs

- Internally, W525 finishes acquiring every 2 ms a new value for every input channel
- This value is always ready to be read by the Saia PCD®.
- Dependent on the Saia PCD® speed, the transmission time of a single 16-Bit scaled value (of a single input channel) takes typically 100  $\mu s$  (on a PCD2.M480) or 600  $\mu s$  (on a PCD2.M170)

### Outputs

- Internally, W525 outputs the last received output value from Saia PCD® with a maximum delay of 2 ms.
- Dependent on the Saia PCD® speed, the transmission time of a single 16-Bit scaled output value takes typically 100  $\mu s$  (on a PCD2.M480) or 600  $\mu s$  (on a PCD2.M170).

## Filter

### Inputs

There are two factors, which have filtering effects to the acquired values:

- The base hardware filter with a time constant of 2 ms. This filter attenuates the input signal by 6 dB/decade at a cut-off frequency of 80 Hz.
- The second influence is caused by software and results in a delay of the acquired value for 2 ms with a notch filter characteristics at 500 Hz if no software based 50 Hz / 60 Hz filter is selected.

In case of use of a 50 Hz (60 Hz) filter, the notch filter frequency is 50 Hz (60 Hz); the delay remains the mentioned 2ms.

## • Outputs

There is only the hardware based filter with a time constant of 1 ms, which is active

## Technical Data

<b>Inputs</b>	
<b>General:</b>	
Resolution:	14 Bit
Kind of Measurement:	differential
Number of channels:	4
Galvanic isolated to Saia PCD®:	yes, 500 V
Galvanic isolated to external supply:	yes, 500 V
Galvanic isolated between other channels:	no
Kind of connections:	two wires per channel
How to configure mode of operation:	by DIP-Switches
Accuracy at 25 °C:	± 0.2% max.
Accuracy repetitive:	± 0.05% max.
Temperature drift (0...55 °C) max.:	± 70 ppm/°C
Over voltage protection:	± 50 V min.
Over current protection:	± 35 mA min.
Common mode voltage max:	± 50 V min.
Common mode rejection ratio:	70 dB min.
<b>Filter:</b>	
Time constant of hardware filter:	2 ms
Attenuation of software based 50 Hz Filter:	40 dB min. between 49.5 and 50.5 Hz
Attenuation of software based 60 Hz Filter:	40 dB min. between 59.5 and 60.5 Hz
<b>Voltage mode:</b>	
Resolution range 0... 10 V mode:	14 Bit; 0.61 mV per LSB
<b>Current mode:</b>	
Current shunt:	125 Ω
Resolution range 0... 20 mA:	14 Bit; 1.22 µA per LSB
Resolution range 4... 20 mA:	13.7 Bit; 1.22 µA per LSB
<b>Temperature / Resistance mode:</b>	
Resolution for Pt1000; Range -50... 400 °C	0.1 °C
Resolution for Pt500; Range -50... 400 °C	0.2 °C
Resolution for Ni1000; Range -60... 200 °C	0.1 °C
Resolution for Resistor; Range 0... 2500 Ω	0.2 Ω
Power dissipation in temp. sensor / resistor:	2.5 mW max

Working resistance:	< 600 Ω
Resolution range 0 ... 20 mA:	12 Bit; 4.88 µA per LSB
Resolution range 4 ... 20 mA:	11.7 Bit; 4.88 µA per LSB
<b>General Data</b>	
Power consumption at I/O-Bus +5V:	max. 40 mA
Power consumption at I/O-Bus V+:	unloaded
Temperature range:	0...55 °C
<b>External power supply</b>	
(It is possible and allowed to use the same power supply as the Saia PCD® itself is supplied with – without losing the galvanic isolation of the I/Os!)	
Operation voltage:	24 V ±4 V smoothed
Power consumption:	max. 2.5 W (depends on output load)
Terminal:	PCD2 Pluggable 14-pole screw terminal (PCD2.W525; O no. 4 405 5002 0, will be delivered with the module), both for wires up to 1,5 mm <sup>2</sup>

## Signification of the I/O words of a PCD2/3.W525 module?

When configuring a W525 module using the Device Configurator or the Profi-S-I/O (or Profibus DP) Network Configurator, the PCD2/3.W525 does need two registers for the analogue outputs and 8 registers for the analogue inputs.

The significations of the registers are the following:

### Output registers:

Register	Bit 31..16	Bit 15..0
n		Value CH0 Output
n+1		Value CH1 Output

5

### Description of the output registers:

#### Value CH0..1 (Register n, n+1)

This registers (Bit 0 to 15) does contain the analogue output value of the corresponding analogue output. It's a 12 Bit value.

### Input registers:

Register	Bit 31..16	Bit 15..0
n		Value CH0 Input
n+1		Value CH1 Input
n+2		Value CH2 Input
n+3		Value CH3 Input
n+4		Load Current/Voltage
n+5		Status Module
n+6		Status Input
n+7		Status Output

### Description of the input registers:

#### Value CH0..CH3 (Register n...n+3)

This registers (Bit 0 to 15) does contain the analogue input value of the corresponding analogue input. It's a 14 Bit value.

#### Load\_Current / Load\_Voltage (Register n+4)

On this register (Bit 0 to 15) the actual current or voltage value is displayed.

- current in [μA] (0..20'000)
- voltage in [mV] (0..10'000)

**Status Module (Register n+5)**

This register (Bit 0 to 15) does contain the actual status of the module

**Table module status:**

Bit	Description
15:14	Reserved
13	Error on the output channel CH1
12	Error on the output channel CH0
11	Error on the input channel CH3
10	Error on the input channel CH2
9	Error on the input channel CH1
8	Error on the input channel CH0
7:5	Reserved
4	Communication: Illegal Command. Is set to 1 if the module receive a not know instruction.
3	Communication: packet too long. Is set to 1 if during the communication a data byte (CMD/ Data = 0) is received although a commando byte should be received (CMD/Data = 1)
2	UExt too low. The voltage of the external power supply is to low!
1	UExt Fail.
0	No Response.

5

**Status Input (Register n+6)**

This register (Bit 0 to 15) does contains the status of the input channels CH0..  
CH3. The status of each input channel is displayed on 4 bits.

**Status Input:**

Bit	Description
Bit 0..3	CH0 Status
Bit 4..7	CH1 Status
Bit 8..11	CH2 Status
Bit 12..15	CH3 Status

**Table input status:**

Bit	Description
3	Over Temperature
2	Not Calibrated
1	Over Range
0	Under Range

### Status Output (Register n+7)

This register (Bit 0 to 15) does contain the status of the two output channels CH0 and CH1.

The status of each output channel is displayed on 6 bits.

#### Status Output:

Bit	Description
Bit 0..5	CH0 Status (LOW BYTE)
Bit 8..13	CH1 Status (HIGH BYTE)

#### Table output status:

Bit		Description
CH0	CH1	
5	13	Load Resistance too high. Only for outputs in current mode. Occurs typically if the output circuit is open
4	12	Load Resistance too low. Only for outputs in voltage mode. Occurs typically in case of short circuit
3	11	Over Temperature
2	10	Not Calibrated
1	9	Over Range
0	8	Under Range

## 5.14 Analogue weighing modules

<b>PCD2.W720</b>	<b>2-channel weighing module for 4/6-wire elements</b>
------------------	--

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

The module PCD2.W720 is described in the manual 26/833.

5

## 5.15 Analogue thermocouple modules

<b>PCD2.W745</b>	<b>4-channel thermocouple modules for J, K... thermoelements</b>
------------------	--

### Supported temperature sensors are:

- Thermocouples – TC type J, K
- Resistive temperature detectors – RTD's type Pt 100, Pt 1000, Ni 100, Ni 1000

**5**

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

The module PCD2.W745 is described in the manual 26/796.

## 5.16 Fast counting modules

<b>PCD2.H100</b>	<b>Counting module up to 20 kHz</b>
<b>PCD2.H110</b>	<b>General purpose counting and measuring module up to 100 kHz</b>

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

**5**

### 5.16.1 PCD2.H100, counting module up to 20 kHz

#### Application

Simple counting module, comprising two inputs "A" and "B" plus one direct control output marked "CCO"; allows counting of the number of revolutions or the calculation of distances (pulses) and the measurement by counting of pulses within a logical AND gate (second input).

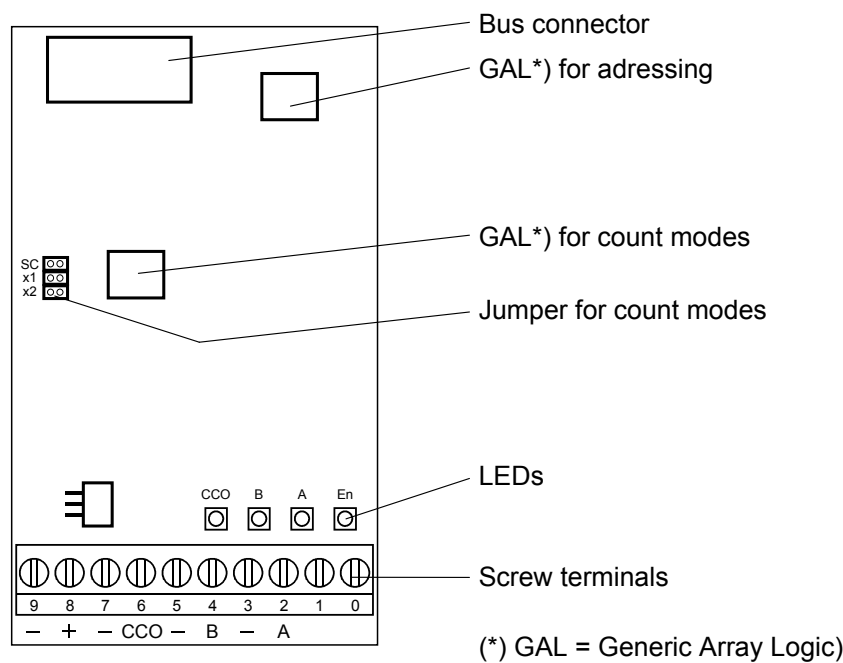

Typical areas of application:

- Counting revolutions or distances (impulses)
- Presetting a count value and switching off output CCO when Counter = 0
- Measurement by counting: measuring signals counted only when particular conditions are met, e.g. photoelectric barrier covered
- Counting with recognition of count direction for incremental shaft encoders providing simple motion control

#### Technical data

Number of systems:	1
Counting range:	0...65,535 (16 bit) (can be extended with CPU counters)
Counting frequency:	max. 20 kHz (at pulse/pause ratio 50 %)
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
"IN-A" and "IN-B" signal voltages:	nominal voltage: 24 VDC "low" range: -30...+5 V "high" range: +15...30 V for source operation
Input current:	typically 7.5 mA
Input filter:	25 kHz
<b>Process output</b>	
Counter controlled output CCO:	counter output (switches when count is 0 or 65,535)
Current range:	5...500 mA (max. current leakage 1 mA) (min. load resistance 48 Ω in voltage range 5...24 V).
Voltage range:	5...32 V smoothed, residual ripple max. 10 %
Circuit type:	Electrically coupled, not short circuit protected, positive switching
Voltage drop:	typically 2V at 500 mA
Output delay:	< 10 µs, (longer for inductive load due to protective diode).
<b>Power supply</b>	
External supply	5...32 VDC, (for supply of CCO output only)
Internal current consumption: (from +5 V bus)	max. 90 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	CCO output load current
<b>Operational conditions</b>	
Ambient temperature	operation: 0...+55 °C without forced ventilation, storage: -20...+85 °C
Noise immunity:	EC mark according to EN 61000-6-3 and EN 61000-6-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
<b>Count modes:</b>	Selectable with jumper
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

LEDs and connection terminals

5

"A"	Input "A"	1
"B"	Input "B"	2
"En" (Enable)	Counter active	0
"CCO"	Output "CCO"	3

Changing the jumpers

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

## Count modes

### SC (Single Count):

Counting signals at input A.  
Up and down counting selectable by user program.

To enable signals at input A to be counted, input B must be connected to 24 V (AND gate).

5

**Modes x1, x2:** Up/down counting mode for 2-phase incremental shaft encoder at inputs A and B.

#### x1

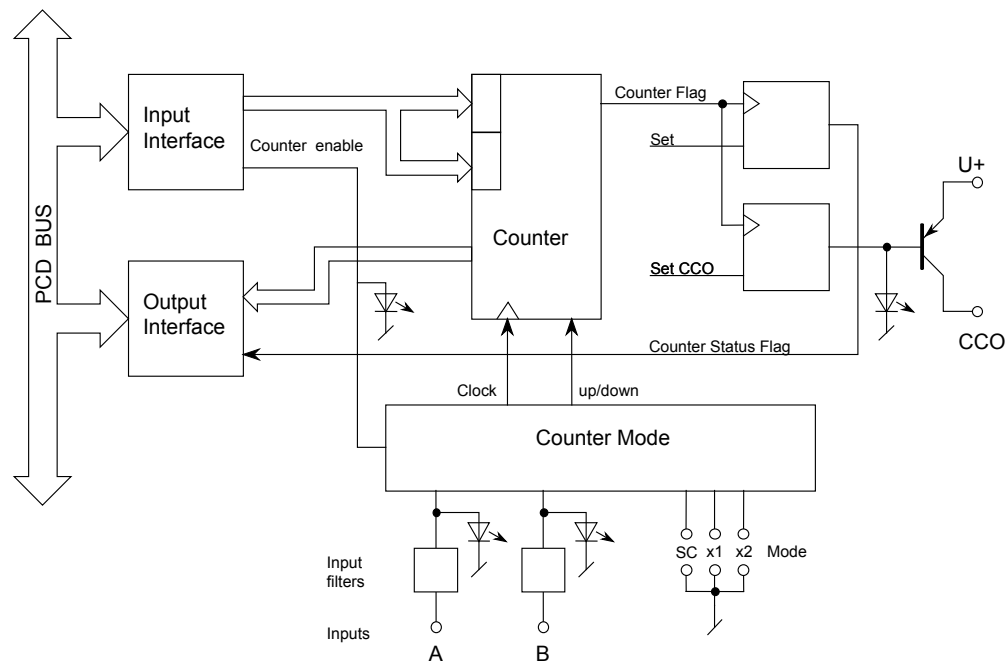

#### x2

### Block diagram

5

### Operating principle

This can be largely derived from the block diagram. It is only necessary to add some explanation about the counter output circuit:

The output of the internal counter is identified as “Counter Flag”. The user has no hardware access to it. This counter flag is set to “1” whenever the counter is loaded or by means of a separate instruction.

The flag is set to “0” in up-counting mode: when counter value 65,535 is reached  
 in down-counting mode: when counter value 0 is reached

To reset a CCO hardware output which had previously been set high by the user program, it is necessary to differentiate between two cases:

- count range between 0...65,535 (normal case)
- count range exceeding 65,535

Case a): Resetting the counter flag results in a simultaneous reset of the CCO output.

The “Reset-Enable” should be activated **before** the counter reaches zero.

Case b): If the count range has to extend beyond the value 65,535, "Reset Enable" can be activated later, i.e. between the penultimate and the last time the counter reaches zero. This means that the CCO output is only reset after several passes of the counter. The number of passes is counted by a CPU counter.

For example, output CCO should be switched off after 200,000 count signals.

5

## Programming

Classic: [Programming examples](#) for the PCD2.H100 can be found in a separate manual and on the TCS Support site ([www.sbc-support.com](http://www.sbc-support.com) + getting started).  
 xx7: the firmware reads in the values according to the configuration (I/O Builder)

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.16.2 PCD2.H110, general purpose counting / measuring module up to 100 kHz

#### Application

Measuring and fast counting module for general counting and simple motion control tasks; also for specific applications such as frequency measurement, period and pulse length measurement, etc. The module is equipped with an FPGA (Field Programmable Gate Array) and can be programmed for special high volume applications by using a plug-in PROM.

#### Technical data

Number of systems:	1
Counting range:	0...16,777,215 (24 bit)
Counting frequency:	up to 100 kHz
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
Number of inputs:	4
Terminal 0 = E0	Input "A": for counting and measuring
Terminal 1 = E1	Input "B": for counting only
Terminal 2 = E2	Input "Enable C": for use as counting module
Terminal 3 = E3	Input "Enable M": for use as measuring module
Nominal voltage:	24 VDC "low" range: -30...+5 V "high" range: +15...30 V for source operation
Input current:	typically 6.5 mA
Input filter:	150 kHz
Circuit type:	electrically connected
<b>Digital outputs</b>	
Number of outputs:	2
Terminal 4 A0:	Output "CCO" (for counter)
Terminal 5 A1:	Output "TCO" (for measuring functions)
Current range:	5...500 mA (max. current leakage 1 mA) (min. load resistance 48 Ω in voltage range 5...24 V).
Frequency:	≤ 100 kHz
Voltage range:	5...32 V smoothed, residual ripple max. 10 %
Circuit type:	Electrically coupled, not short circuit protected, positive switching
Voltage drop:	typically < 0.5 V at 500 mA
Output delay:	< 1 μs, (longer for inductive load due to protective diode).
<b>Power supply</b>	
External supply	5...32 VDC, (for supply of CCO output only)
Internal current consumption: (from +5 V bus)	max. 90 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 2 A (all outputs)
<b>Operational conditions</b>	
Ambient temperature	operation: 0...+55 °C without forced ventilation, storage: -20...+85 °C
Noise immunity:	EC mark according to EN 61 000-6-3 and EN 61 000-6-2

Programming:	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²

LEDs and connection terminals

Block diagram

For further details, please refer to manual 26/755 "PCD2.H110 - Universal counting and measuring module".

Watchdog: This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.17 SSI interface modules

PCD2.H150	SSI interface module
-----------	----------------------

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.17.1 PCD2.H150, SSI interface module for absolute encoder

#### Application

The PCD2.H150 Module is an interface module for the SSI standard. (SSI = Synchronous Serial Interface). The SSI standard is used with most absolute encoders. Details of SSI specifications can be obtained from the STEGMANN company's brochure: "SSI-Technical Information".

The hardware consists of an RS-422 port for the SSI interface and 4 general-purpose digital outputs. Functionality is provided by an FPGA (field programmable gate array).

#### Technical data

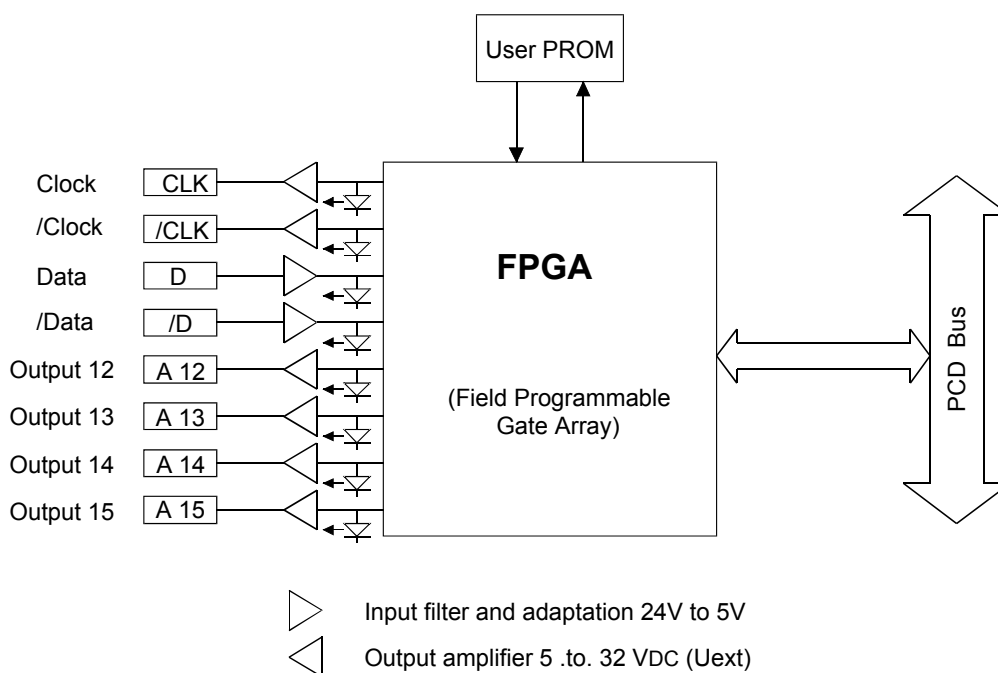

Resolution:	configurable for 8...29 data bits and 0...2 control bits										
Clock frequency:	configurable for 100 kHz, 200 kHz, 300 kHz and 500 kHz (input filter designed for 500 kHz)										
Frequency has to be selected depending on cable length:	<table> <tr> <th>Cable length</th><th>Frequency</th></tr> <tr> <td>&lt; 50 m max.</td><td>500 kHz</td></tr> <tr> <td>&lt; 100 m max.</td><td>300 kHz</td></tr> <tr> <td>&lt; 200 m max.</td><td>200 kHz</td></tr> <tr> <td>&lt; 400 m max.</td><td>100 kHz</td></tr> </table>	Cable length	Frequency	< 50 m max.	500 kHz	< 100 m max.	300 kHz	< 200 m max.	200 kHz	< 400 m max.	100 kHz
Cable length	Frequency										
< 50 m max.	500 kHz										
< 100 m max.	300 kHz										
< 200 m max.	200 kHz										
< 400 m max.	100 kHz										
Data code:	configurable - Gray or binary										
Read mode:	Normal (single read). Ring mode: 'double read and compare' (not all encoders support this function)										
Offset position:	An offset can be defined when initializing the PCD2.H150. The defined offset is always subtracted in the FBs. The 'Set Zero' command also uses this offset register.										
Execution time:	typically 1.5 ms for reading the SSI value										
Cable break detection:	detected with the FB 'timeout' (10 ms)										
Flags	'fTimeout', (for cable break, encoder fault or incorrect addressing) 'fPar_Err', (if an incorrect FB parameter is sent) 'fRing_err' (if compare error in 'double read')										
<b>SSI interface</b>											
1 input for SSI data	RS-422, electrically isolated										
1 output for SSI clock	RS-422, electrically connected, as the encoder input is normally isolated										
<b>Digital outputs</b>											
Number of outputs:	4										
Terminal 4 = A12:	Speed high										
Terminal 5 = A13:	Speed low										
Terminal 6 = A14:	Dir + positive direction										
Terminal 7 = A15:	Dir - negative direction										
Switching capacity:	0.5 A each in the range 10...32 VDC, residual ripple max. 10 %										
Short circuit protection:	yes, $I_{max} = 1.5 \text{ A}$										
Electrical isolation:	no										
Voltage drop:	max. 0.3 V at 0.5 A										
Circuit type:	positive switching										
Output delay:	typically 50 $\mu\text{s}$ , max. 100 $\mu\text{s}$ , ohmic load										
<b>Power supply</b>											
Internal current consumption: (from +5 V bus)	25 mA										

Internal current consumption: (from V+ bus)	0 mA
External current consumption:	For all outputs max. 2 A, residual ripple max. 10%
<b>Operational conditions</b>	
Ambient temperature	operation: 0...+55 °C without forced ventilation, storage: -20...+85 °C
Noise immunity:	EC mark according to EN 61 000-6-3 and EN 61 000-6-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²

LEDs and connection terminals

- LED 0: SSI output 'Clock'
- LED 2: SSI input 'Data'
- LED 4: State of output 12
- LED 5: State of output 13
- LED 6: State of output 14
- LED 7: State of output 15

**Block diagram**

5

For further details, please refer to manual 26/761 "PCD2.H150 - SSI interface for absolute encoder".

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

5.18      **Motion control modules for stepper motors**

PCD2.H210	Motion control module for stepper motors
-----------	--

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.18.1 PCD2.H210, Motion control module for stepper motors

#### Application

The PCD2.H210 Module provides fully autonomous control and monitoring of stepper motor travel, with run-up and braking ramps. The commands for stepper motor motion cycles are transmitted to the module by function blocks in the user program.

During motion, the SM processor monitors the frequency profile and the acceleration and braking ramps to move the axis to the destination position without loss of steps. Each module controls an independent axis. The module supplies a mono-phase pulse string which is conveyed to a suitable electronic drive. The module has 4 inputs and 4 outputs.

5

#### Technical data

Number of axes:	1
Positioning distance (counting range):	0 ... 16,777,215 (24 bit)
Frequency ranges (selectable *):	9.5 ... 2,431 Hz 19 ... 4,864 Hz 38 ... 9,727 Hz 76 ... 19,454 Hz
Acceleration *):	0.6 ... 1224 kHz/s, non-linear range division depending on the selected frequency range
Profile generator:	with symmetrical acceleration and braking ramps
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
Number of inputs: Terminal 0 = E0 Terminal 1 = E1 Terminal 2 = E2 Terminal 3 = E3	4 configurable as emergency stop or for general use configurable as limit switch LS1 or for general use configurable as reference switch or for general use configurable as limit switch LS2 or for general use
Nominal voltage:	24 VDC "low" range: -30 ... +5 V "high" range: +15 ... 30 V for source operation only, for safety reasons, normally-closed contacts (negative logic) should be used
Input current:	typically 6.5 mA
Input filter:	< 1ms
Circuit type:	electrically connected
<b>Digital outputs</b>	
Number of outputs: Terminal 4 A0: Terminal 5 A1: Terminal 6 A2: Terminal 7 A3:	4 Output "PUL" (pulses for motor) Output "DIR" (direction of motor rotation) programmable as required programmable as required
Switching capacity:	0.5 A each in the range 5 ... 32 V, residual ripple max. 10 %
Short circuit protection:	no
Electrical isolation:	no

Voltage drop:	max. 0.3 V at 500 mA
Output delay:	< 1 µs, (longer for inductive load due to protective diode).
<b>Power supply</b>	
Internal current consumption: (from +5 V bus)	85 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 2 A (all outputs), residual ripple max. 10 %
<b>Operational conditions</b>	
Ambient temperature	operation: 0...+55 °C without forced ventilation, storage: -20...+85 °C
Noise immunity:	EC mark according to EN 61000-6-3 and EN 61000-6-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm <sup>2</sup>

For further information, please refer to manual 26/760, "PCD2.H210 - motion control modules for stepper motors"

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 5.19 Motion control modules for servo-motors

<b>PCD2.H310</b>	<b>Motion control module for servo-motors, 1-axis encoder, 24 V</b>
<b>PCD2.H311</b>	<b>Motion control module for servo-motors, 1-axis encoder, 5 V</b>
<b>PCD2.H320</b>	<b>Motion control module for servo-drives, 2-axis with 24 V encoder</b>
<b>PCD2.H322</b>	<b>Motion control module for servo-drives, 1-axis with 24 V encoder (slave operation)</b>
<b>PCD2.H325</b>	<b>Motion control module for servo-drives, 2-axis with 5 V and SSI absolute value encoder</b>
<b>PCD2.H327</b>	<b>Motion control module for servo-drives, 1-axis with 5 V encoder and SSI absolute value encoder (slave operation)</b>

5

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24 V are disconnected from the power supply.

### 5.19.1 PCD2.H31x, motion control module for servo-motors, 1-axis encoder

#### Application

The PCD2.H31x motion control module is an intelligent I/O module. The module is used to position a single axis with variable speed control DC or AC servomotors. This requires the drive unit to have a power stage and incremental shaft encoder for capturing position or speed.

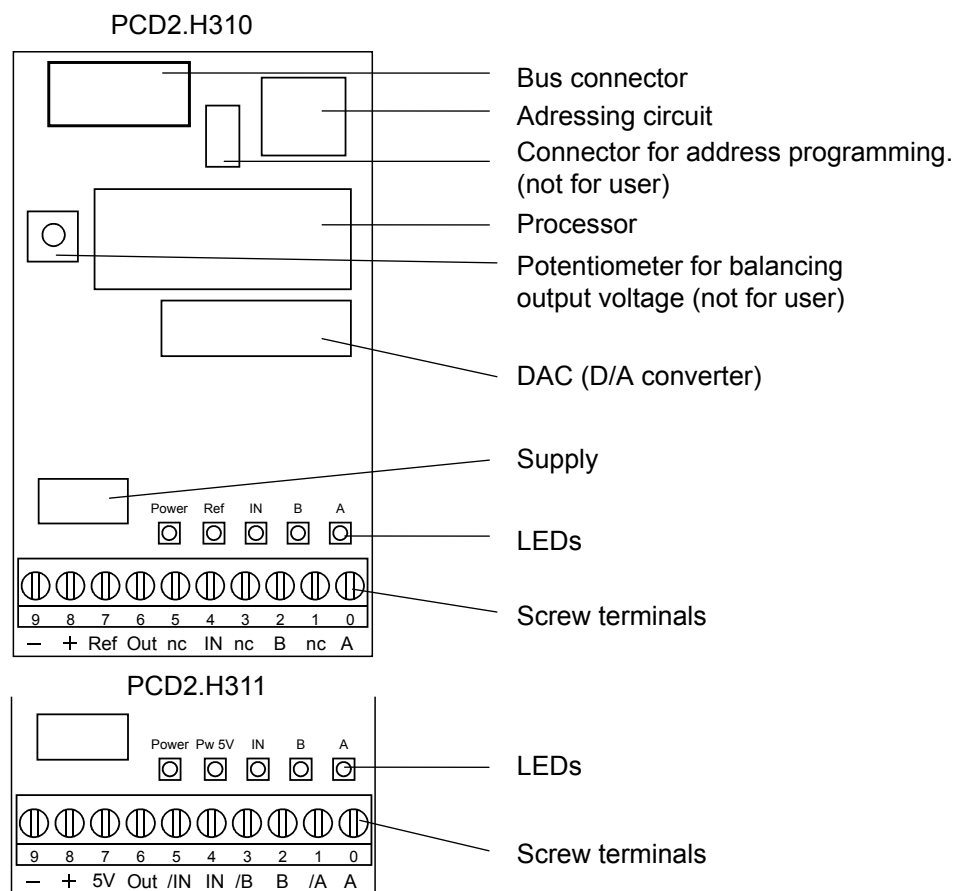

Each module contains a single-chip processor that independently controls every movement according to parameters supplied by the user program (velocity, acceleration and destination position). The axes are controlled independently of each other, which means that no interpolation is possible to trace curved paths. On the other hand, linking of multiple axes (point-point) in quasi-synchronous operation can be programmed.

#### Technical data

Number of axes:	1
<b>Motion parameters</b>	
31-bit registers are used for destination position, velocity and acceleration, numerical range $\pm 2^{30}$	
Position:	Resolution selectable (depending on mechanical factor)
Velocity:	Resolution selectable (depending on mechanical factor)
Acceleration:	Resolution selectable (depending on mechanical factor)
PID controller:	Sample time 341 $\mu$ s, programmable proportional, integral and differential factors. Sample time for differential part can be programmed separately.
Analogue controller output:	Velocity set point $\pm 10$ V (resolution 12 bit)
Counting frequency:	max. 50 kHz
<b>Digital inputs to PCD2.H310</b>	
Number of inputs:	1 encoder A, B, IN, 1 reference input
Nominal voltage:	24 V typically "low" range: 0 ... +4 V "high" range: +15 ... 30 V for source operation only
Input current:	typically 6 mA
Circuit type:	electrically connected
Reaction time:	30 $\mu$ s
Encoder frequency:	max. 100 kHz
<b>Digital inputs to PCD2.H311</b>	
Number of inputs:	1 encoder A, /A, B, /B, IN, /IN, (no reference input)
Input voltage:	5 V typically
Signal level:	antivalent inputs according to RS-422
Hysteresis:	max. 200 mV
Line termination resistance:	150 $\Omega$
Encoder frequency:	max. 100 kHz
<b>Analogue outputs for PCD2.H310/311</b>	
Analogue controller output:	resolution 12 bit (with sign bit)
Short circuit protection:	yes
Electrical isolation:	no
Output voltage *):	$\pm 10$ V, accuracy of adjustment $\pm 5$ mV
Circuit type:	positive switching

Minimum load impedance:	3 kΩ
*) Balancing output voltage is carried out in the factory. The user is strongly advised not to adjust the tuning potentiometer.	
<b>5 V supply for 5 V encoder for PCD2.H311</b>	
5 V output:	5 V supply of encoder
Short circuit protection:	yes
Electrical isolation:	no
Output voltage:	5 V
Max. load current:	300 mA
Short circuit current:	400 mA (this current also loads the PCD's +5 V bus)
<b>Power supply</b>	
Internal current consumption: (from +5 V bus)	max. 140 mA typically 125 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 15 mA, typically 10 mA, residual ripple max. 10 %
<b>Operational conditions</b>	
Ambient temperature	operation: 0 ... +55 °C without forced ventilation, storage: -20 ... +85 °C
Noise immunity:	EC mark according to EN 61 000-6-3 and EN 61 000-6-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Pluggable 10-pole screw terminal block (4 405 4847 0), for wires up to 1.5 mm²

## LEDs and connection terminals

LED "A"	State of encoder input "A"
LED "B"	State of encoder input "B"
LED "IN"	State of index input
LED "Ref"	State of reference switch (H310)
LED "Pw 5 V"	Supply (5 V) to encoder (H311)
LED "Power"	Supply $\pm 15$ V

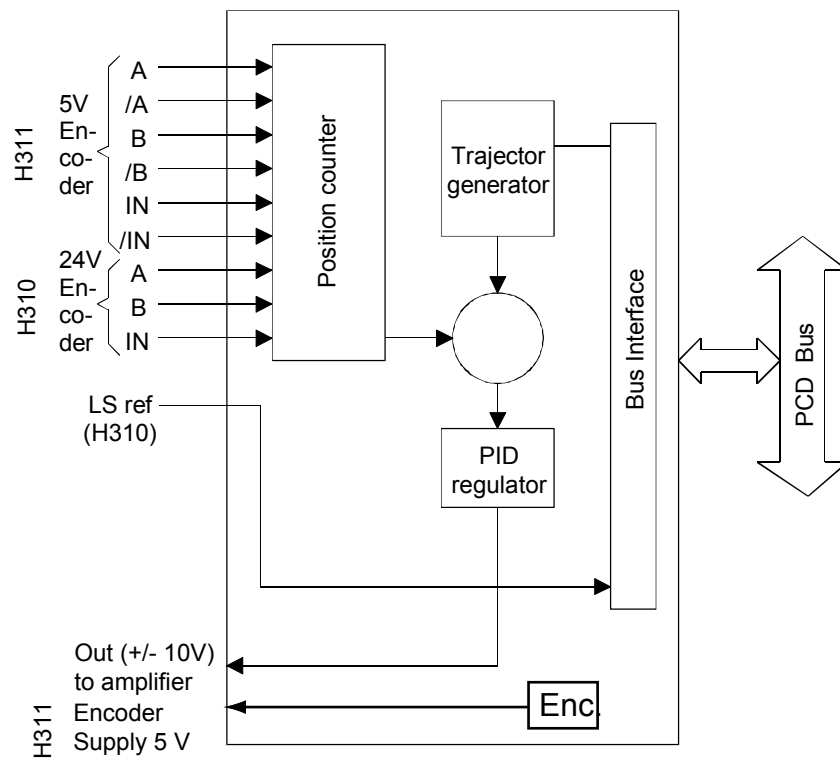

## Terminals - PCD2.H310

- and + = external supply terminals  
**Ref** = digital input for the reference switch  
**Out** = analogue controller output  
**A, B, IN** = encoder signals  
**nc** = terminals not used

## Terminals - PCD2.H311

- and + = external supply terminals  
**5 V** = output for 5 V supply to encoder (300 mA max.)  
**Out** = analogue controller output  
**A, B, IN** = non-inverted encoder signals  
**/A, /B, /IN** = inverted encoder signals

**Block diagram**

5

For further information, please refer to manual 26/762, “PCD2.H31x - motion control module for stepper motors”

**Watchdog:** This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

### 5.19.2 PCD2.H32x, motion control modules for servo-drives

There are four module types available:

PCD2.H320:	2 axes with 24 V encoder
PCD2.H325:	2 axes with 5 V and SSI absolute value encoder
PCD2.H322:	1 axis (slave operation) with 24 V encoder
PCD2.H327:	1 axis (slave operation) with 5 V and SSI absolute value encoder

The PCD2.H32x motion control modules are intelligent I/O modules in the PCD2 series. They are used to position two independent axes, with one variable speed AC or DC drive (servo-motor) each, or two axes as an electronic transmission. This requires the drive unit to have a power stage and incremental shaft encoder for capturing position or speed. Displacement control may also be achieved with an SSI absolute value encoder.

Each module contains a DSP processor that independently controls every movement according to parameters supplied by the user program: velocity, acceleration and destination position ("PID control"). This enables each axis to execute independent movements, perform S-curve and trapezoidal motion profiles, change velocity and acceleration, perform interrupt functions and record the current axis position during motion.

In a PCD2 with expansion housing, up to 7 PCD2.H32x modules can be operated in parallel.

#### Technical data

Function-specific data		
Number of systems:	2	for H320/5
	1	for H322/7 + 1 H100 counter input 4 DI + 1 DO

Motion parameters	
31-bit registers are used for destination position, velocity and acceleration, numerical range $\pm 2^{30}$ )	
Position	Units and resolution selectable (depending on mechanical factor)
Velocity	Units and resolution selectable (depending on mechanical factor)
Acceleration	Units and resolution selectable (depending on mechanical factor)
PID controller	Sample time 100 $\mu$ s / axis, programmable proportional, integral and differential factors. Sample time for differential part can be programmed separately. Additional velocity and acceleration feed-forward (all 16 bit values)
Analogue controller output	Velocity set point $\pm 10$ V (resolution 12 bit)
Counting frequency	max. 125 kHz for H320/5 max. 250 kHz for H322/7

Digital inputs for all PCD2.H32x modules per axis	
Number of inputs	1 reference input "REF" <sup>1)</sup> 2 limit switch inputs "LS1 / LS2" <sup>1)</sup> 1 synchronization input "SI" <sup>2)</sup>
Input voltage	24 VDC (6 to 32 VDC) smoothed, max. residual ripple 10 %
"Low" range	-30 ... +5 V
"High" range	+15 ... +32 V
Input current at 24 VDC	7 mA (typically)
Circuit type	electrically connected
Reaction time	300 µs
<sup>1)</sup> For safety reasons, normally-closed (NC) or PNP sensors should be used for the reference and limit switches. For this reason, these inputs work in sink mode (negative logic, i.e. LED = on when 0 V at input).	
<sup>2)</sup> The synchronization input works in source mode (positive logic)	

Digital outputs for all PCD2.H32x modules		
	Axis 1	Axis 2
Outputs	SO	SO
Supply	U <sub>ext</sub>	U <sub>ext</sub>
U <sub>ext</sub> (typically 24 VDC)	6 ... 32 VDC	6 ... 32 VDC
I <sub>out</sub>	5 ... 500 mA	5 ... 500 mA
Voltage drop at 500 mA	< 0.3 V	< 0.3 V
Short circuit protection	Yes <sup>1)</sup>	Yes <sup>1)</sup>
Electrical isolation	No	No
<sup>1)</sup> The short circuit current is restricted to max. 1.6 A		

Analogue outputs for modules PCD2.H320 and PCD2.H325		
	Axis 1	Axis 2
Outputs	OUT	OUT
Resolution (incl. sign bit)	12 bit	12 bit
Short circuit protection	Yes	Yes
Electrical isolation	No	No
Output voltage fluctuation <sup>1)</sup>	+/- 10 V	+/- 10 V
Minimum load impedance	3 kΩ	3 kΩ
<sup>1)</sup> Setting accuracy ± 5 mV. Balancing output voltage is carried out in the factory, and the value is stored in a digitally programmable potentiometer		

Analogue outputs for modules PCD2.H322 and PCD2.H327		
	Axis 1	Axis 2
Outputs	OUT	NC
Resolution (incl. sign bit)	12 bit	-
Short circuit protection	Yes	-
Electrical isolation	No	-
Output voltage fluctuation <sup>1)</sup>	+/- 10 V	-
Minimum load impedance	3 kΩ	-
<sup>1)</sup> Setting accuracy ± 5 mV. Balancing output voltage is carried out in the factory, and the value is stored in a digitally programmable potentiometer		

Encoder inputs for modules PCD2.H320 and PCD2.H322		
	Axis 1	Axis 2
Inputs	A B IN	A B IN
Number of inputs	3	3
Input voltage (typical)	24 V	24 V
Signal state L (Low)	-30...+5 V	-30...+5 V
Signal state H (High)	+15...+32 V	+15...+32 V
Input current (typical) H320	7 mA	7mA
H322	7 mA	2mA
Source operation (positive logic)	x	x
F <sub>max</sub>	125 kHz <sup>1)</sup>	125 kHz <sup>1)</sup>
<sup>1)</sup> Internal counting frequency 500 kHz		

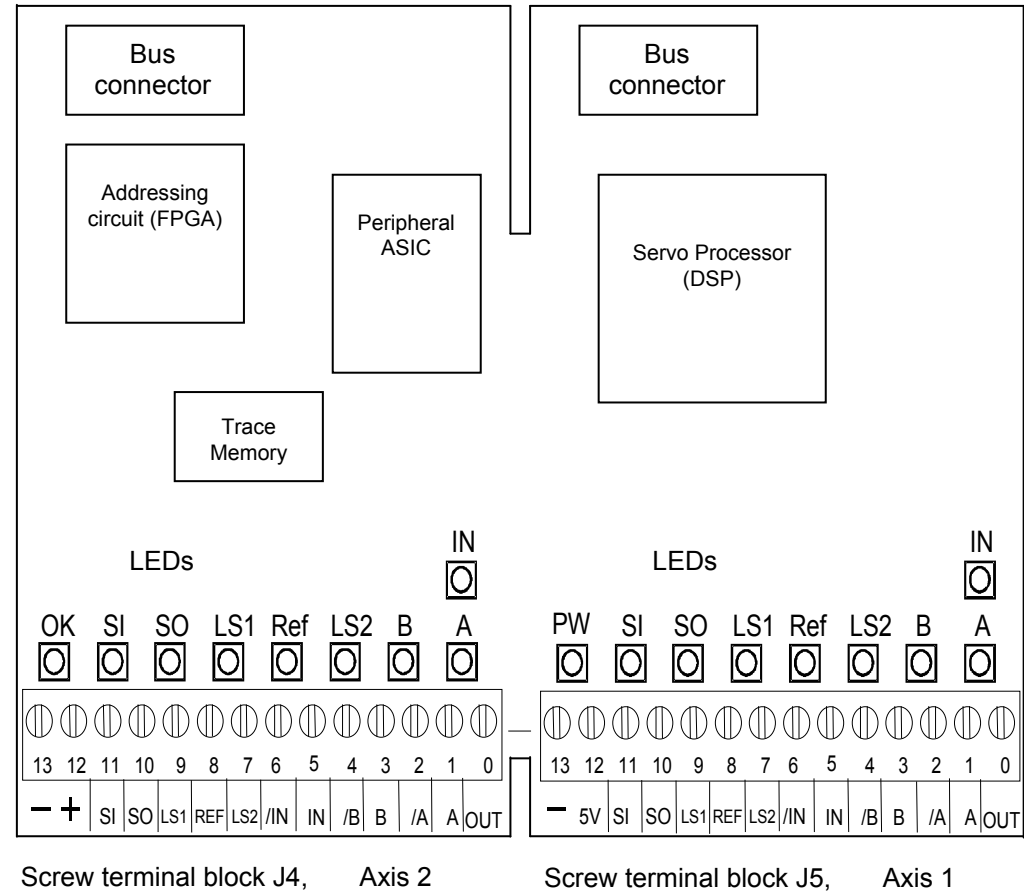

Encoder inputs for modules PCD2.H325 and PCD2.H327		
	Axis 1	Axis 2
Inputs	A,/A B,/B IN,/IN	A,/A B,/B IN,/IN
Number of inputs	6	6
Input voltage (typical)	RS-422	RS-422
Input impedance (typical) H325	150 Ω	150 Ω
H327	150 Ω	1500 Ω
F <sub>max</sub>	250 kHz <sup>1)</sup>	250 kHz <sup>1)</sup>
<sup>1)</sup> Internal counting frequency 1 MHz		

5 V supply for 5 V encoder modules PCD2.H325 and PCD2.H327	
Short circuit protection	Yes
Electrical isolation	No
Output voltage	5 V
Max. load current	300 mA
Short circuit current	400 mA
Overvoltage protection	TVS diode 39 V +/- 10 %
Reverse voltage protection	No

Power supply to all modules	
Internal current consumption: from +5 V bus (without encoder)	typically 210 mA, max. 230 mA (250 mA in SSI operation)
Internal current consumption: from V+ bus (without encoder)	15...20 mA
External current consumption:	0...2 mA (without load current) 1 A for outputs
Total current consumption for all I/O modules including encoders must not exceed 1.6 A. PCD2.H32x modules should be plugged onto the base unit wherever possible (not the expansion housing).	
Operational conditions	
Ambient temperature	operation: 0...+55 °C without forced ventilation, storage: -20...+85 °C
Noise immunity:	EC mark according to EN 61 000-6-3 and EN 61 000-6-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Pluggable 10-pole spring terminal block (4 405 4847 0), for wires up to 1.5 mm²

LEDs and connection terminals

5

- |              |                                      |
|--------------|--------------------------------------|
| 2xLED "IN"   | State of index input                 |

| 2x LED "LS2" | State of limit switch 2              |
| 2x LED "Ref" | State of reference switch            |
| 2x LED "LS1" | State of limit switch 1              |
| 2x LED "SO"  | State of synchronization output      |
| 2x LED "SI"  | State of synchronization input       |
| 1x LED "PWR" | State of internal voltage (+/- 15 V) |
| 1x LED "OK"  | State of controller                  |

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix B, "Icons"](#).

Inputs per axis				
Module type	PCD2.H320	PCD2.H322	PCD2.H325	PCD2.H327
Terminal 1 = "A"	Encoder signal "A"			
Terminal 2 = "/A"	Not used		Encoder signal "/A"	
Terminal 3 = "B"	Encoder signal "B"			
Terminal 4 = "/B"	Not used		Encoder signal "/B"	
Terminal 5 = "IN"	Encoder signal "IN"			
Terminal 6 = "/IN"	Not used		Encoder signal "/IN"	
Terminal 7 = "LS2"	Limit switch 2			
Terminal 8 = REF"	Reference switch			
Terminal 9 = "LS1"	Limit switch 1			
Terminal 11 = SI"	Synchronization input			
Screw terminal block J5, axis 1				
Terminal 12 = "5 V"	Not used		Supply output + 5 VDC for encoder	
Terminal 13 = "- "	Ground (PGND)			
Screw terminal block J4, axis 2				
Terminal 12 = "+"	External supply + 24 VDC smoothed, for SO			
Terminal 13 = "- "	Ground (PGND)			
Outputs per axis				
Module type	PCD2.H320	PCD2.H322	PCD2.H325	PCD2.H327
Terminal 0 = "OUT"	Analogue control output. (Slave) axis 1 only			
Terminal 10 = "SO"	Synchronization output			

### Software queries

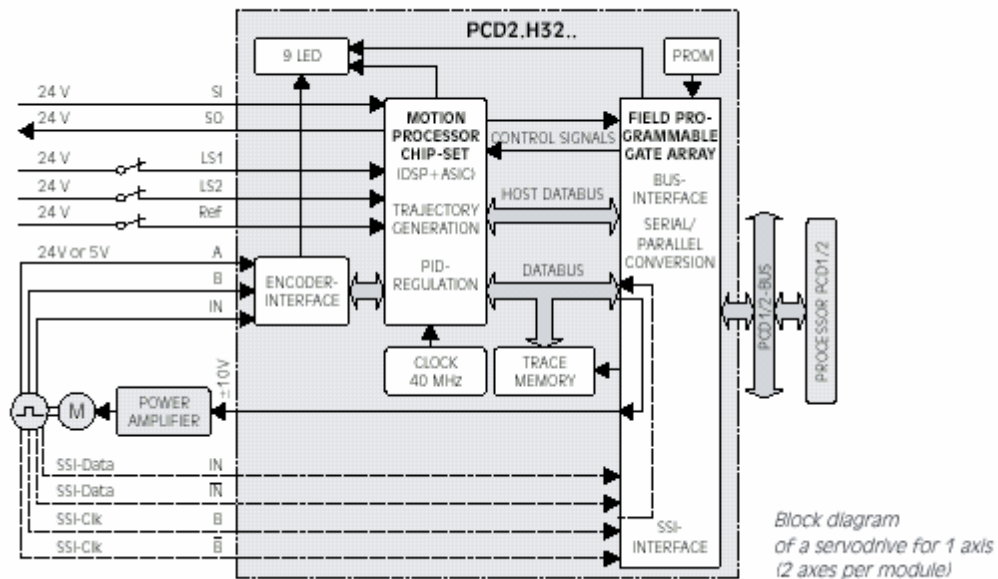

The elements listed in the table below can be queried by the user (examples for module 1). The module type and the FPGA version can be obtained with the 'FB Exec' function and the 'RdIdent' instruction.

Inputs	Description
REF_1s2	REFerence switch
LS1_1s2	Limit switch 1
LS2_1s2	Limit switch 2
AxisSelect_1_2 (output)	RES = axis 1, SET = axis 2
AxisIn_1s2	State of axis synchronization input
AxisOut_1s2	State of axis synchronization output
AxisEvent_1_2	Axis event interrupt
PowerError_1_2	Internal supply error
PowerEncError_1_2	Encoder supply error
CableBreak_1s2	Cable break
SSI_timeout_1s2	SSI timeout
OK_LED_1_2	State of controller (OK LED)
HostIOError_1_2	Host I/O error

(\_1s2 selection of axis via "Axis Select" output)

(\_1\_2 affects whole module)

For further information, please refer to manual 26/772, "PCD2.H32x - motion control modules for servo-drives"

Watchdog: This module cannot be used on the base address 240 (or 496 for the PCD2.M17x), because it would interact with the watchdog, and would cause a malfunction.

For details, please refer to the [“Watchdog” section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 6 Input/output (I/O) modules for PCD3

### 6.1 Introduction to I/O modules

There are over 50 I/O modules available for digital and analogue I/Os, counters etc. If they are connected to a Saia PCD®, programming (FBs and FBoxes) is done in the usual way. If they are connected to a RIO system, nothing particular needs to be programmed on the Master PCD. The RIO sends the correct values to the Master.

Type	I/Os	Description	Input/ output signal range	I/O connector type <sup>a</sup>	Page
------	------	-------------	----------------------------------	------------------------------------	------

#### Digital input modules

PCD3.E110	8 I	8 inputs 8 ms	24 VDC	A / B	6-11
PCD3.E111	8 I	8 inputs 0.2 ms	24 VDC	A / B	6-11
PCD3.E112	8 I	8 inputs 9 ms	12 VDC	A / B	6-11
PCD3.E116	8 I	8 inputs 0.2 ms	5 VDC	A / B	6-11
PCD3.E160	16 I	16 inputs 8 ms, connection via 34-pole ribbon connector	24 VDC	D <sup>7)</sup>	6-13
PCD3.E161	16 I	16 inputs 0.2 ms, connection via 34-pole ribbon connector	24 VDC	D <sup>7)</sup>	6-13
PCD3.E165	16 I	16 inputs 8 ms, connection via 24-pole cage clamp terminal block	24 VDC	C	6-15
PCD3.E166	16 I	16 inputs 0.2 ms, connection via 24-pole cage clamp terminal block	24 VDC	C	6-15

#### Digital input modules, electrically isolated from the I/O Bus

PCD3.E500	6 I	6 inputs 20 ms, electrically isolated	115/230 VAC	A / B	6-18
PCD3.E610	8 I	8 inputs 10 ms, electrically isolated	24 VDC	A / B	6-20
PCD3.E613	8 I	8 inputs 9 ms, electrically isolated	48 VDC	A / B	6-20

#### Digital output modules

PCD3.A300	6 O	6 outputs 2 A	24 VDC	A / B	6-23
PCD3.A400	8 O	8 outputs 0.5 A	24 VDC	A / B	6-25
PCD3.A460	16 O	16 outputs 0.5 A, connection via 34-pole ribbon connector	24 VDC	D <sup>7)</sup>	6-27
PCD3.A465	16 O	16 outputs 0.5 A, connection via 24-pole spring terminal block	24 VDC	C	6-29

#### Digital output modules, electrically isolated from the I/O Bus

PCD3.A200	4 O	4 make contacts 2 A	250 VAC 50 VDC	A / B	6-32
PCD3.A210	4 O	4 break contacts 2 A	250 VAC 50 VDC	A / B	6-34
PCD3.A220	6 O	6 make contacts 2 A	250 VAC 50 VDC	A / B	6-36
PCD3.A251	8 O	6 changeover + 2 make contacts 2 A, connection via 24-pole spring terminal block	48 VAC 50 VDC	C	6-38
PCD3.A410	8 O	8 outputs 0.5 A, electrically isolated	24 VDC	A / B	6-40

#### Digital output modules for manual operation

PCD3.A810	4 O	Manual control module, 2 changeover contacts + 2 make contacts, 2 A, 5(6) A	50 VDC 250 VAC	F	6-43
-----------	-----	--	-------------------	---	------

PCD3.A860	2I+2O	Light and shade module, 2 outputs 12 A/250 VAC, 2 inputs 24 VDC	250 VAC 24 VDC	G H	6-47
-----------	-------	--	-------------------	--------	------

Type	I/Os	Description	Input/ output signal range	I/O connector type <sup>3</sup>	Page
------	------	-------------	----------------------------------	------------------------------------	------

**Digital combined input/output modules**

PCD3.B100	2I+2O +4 I/O	2 inputs, 2 outputs, 4 selectable as inputs or outputs	24 VDC	A / B	6-54
-----------	-----------------	---	--------	-------	------

**Analogue input modules**

PCD3.W200	8 I	8 inputs 10 bit	0...10 V	A / B	6-58
PCD3.W210	8 I	8 inputs 10 bit	0...20 mA	A / B	6-58
PCD3.W220	8 I	8 inputs 10 bit	Pt/Ni1000	A / B	6-58
PCD3.W300	8 I	8 inputs 12 bit	0...10 V	A / B	6-64
PCD3.W310	8 I	8 inputs 12 bit	0...20 mA	A / B	6-64
PCD3.W340	8 I	8 inputs 12 bit, jumper selectable	0...10 V, 0...2.5 V 0...20mA, Pt/Ni1000	A / B	6-64
PCD3.W350	8 I	8 inputs 12 bit	Pt/Ni 100	A / B	6-64
PCD3.W360	8 I	8 inputs 12 bit, resolution < 0.1 °C	Pt1000	A / B	6-64

**Analogue input modules, electrically isolated from the I/O Bus**

PCD3.W305	7 I	7 inputs 12 bit, electrically isolated	0...10 V	E	6-73
PCD3.W315	7 I	7 inputs 12 bit, electrically isolated	0...20 mA	E	6-73
PCD3.W325	7 I	7 inputs 12 bit, electrically isolated	-10 V...+10 V	E	6-73

**Analogue output modules**

PCD3.W400	4 O	4 outputs 8 bit	0...10 V	A / B	6-78
PCD3.W410	4 O	4 outputs 8 bit, jumper selectable	0...10 V, 0...20 mA, 4...20 mA	A / B	6-78
PCD3.W600	4 O	4 outputs 12 bit	0...10 V	A / B	6-82
PCD3.W610	4 O	4 outputs 12 bit, jumper selectable	0...10 V, -10 V...+10 V 0...20 mA, 4...20 mA	A / B	6-82

**Analogue input modules, electrically isolated from the I/O Bus**

PCD3.W605	6 O	6 outputs 10 bit, electrically isolated	0...10 V	E	6-88
PCD3.W615	4 O	4 outputs 10 bit, electrically isolated	0...20 mA	E	6-88
PCD3.W625	6 O	6 outputs 10 bit, electrically isolated	-10 V...+10 V	E	6-88

**Analogue combined input/output modules**

PCD3.W500	2I+2O	2 inputs 12 Bit, 0...10 V, -10...+10 V + 2 outputs 12 Bit	0...10 V	A / B	6-93
-----------	-------	--	----------	-------	------

**Analogue combined input/output modules, electrically isolated**

PCD3.W525	4 I  + 2 A	4 analogue inputs 14 bit  + 2 analogue outputs, 12 bit	0...10 V, 0(4)...20 mA Pt500/1000, Ni1000 0...10 V, 0(4)...20 mA	E	6-98
-----------	------------------	--	---	---	------

Type	I/Os	Description	I/O connector type <sup>3</sup>	Page
------	------	-------------	---------------------------------	------

**Analogue output module for manual operation**

PCD3.W800	4 O	Manual control module 3 outputs 0...10 V with manual control, 1 output 0...10 V without	J	6-104
-----------	-----	--	---	-------

**Weighing modules**

PCD3.W720	2 I	2 weighing systems, up to 6 weighing cells 18 bit <sup>2)</sup>	E	6-108
-----------	-----	---	---	-------

**Universal temperature measurement module**

PCD3.W745	4 I	Thermocouple module for J, K...thermocouples	<sup>8)</sup>	6-109
-----------	-----	--	---------------	-------

**Counting and motion control modules**

PCD3.H100		Counter module up to 20 kHz	A / B	6-111
PCD3.H110		Counter module up to 100 kHz	A / B	6-116
PCD3.H150		SSI interface module	A / B	6-118
PCD3.H210		Motion control module for stepper motors <sup>2)</sup>	A / B	6-121
PCD3.H310		Motion control module for servo-motors 1-axis encoder 24 VDC <sup>2)</sup>	A / B	6-124
PCD3.H311		same as H310, with 1-axis encoder 5 VDC <sup>2)</sup> , <sup>9)</sup>	A / B	6-124

**Input/output simulator unit**

PCD3.S100		Input/output simulator for PCD3.M/C/T	-	6-129
-----------	--	---------------------------------------	---	-------

<sup>2)</sup> These I/O modules cannot currently be used with the PCD3 RIO head station

<sup>3)</sup> I/O connectors are not provided with the I/O modules and must be ordered separately

<sup>4)</sup> Current consumption from internal 5 V bus, capacity max. 600 mA for the PCD3.Mxxx0, max. 650 mA for the PCD3.T76x and max. 1000 mA for the PCD3.C200

<sup>5)</sup> Current consumption from internal 24 V bus, capacity max. 100 mA for the PCD3.Mxxx0, for the PCD3.T76x and for the PCD3.C200

<sup>6)</sup> On request

<sup>7)</sup> Pluggable system cable with connector on Saia PCD® to connect via 34-pole ribbon connector: The preconfigured cables with connectors on the PCD allow many I/O points to be connected quickly and easily. The system cables are described in the PCD1/2 manual, Document-no 26/737.

<sup>8)</sup> Non-pluggable cage clamp terminals

<sup>9)</sup> Up to max.300 mA for the encoder, this current also loads the +5 V bus on the module

**Accessories**

Type	Description
PCD3.E009	Empty module for unused module slots
4 104 7515 0	Socket cover
PCD3.K010	Connector PCD3↔PCD3, directly side to
PCD3.K106	Connecting cable 0.7 m PCD3 ↔ PCD3
PCD3.K116	Connecting cable 1.2 m PCD3 ↔ PCD3
PCD3.K225	Connecting cable 2.5 m PCD3 web server↔PC
4 310 8686 0	Preprinted tapes
4 329 4819 0	Labelling plates
4 310 8723 0	Snap-on clips incl. generic labels, Set of 10

### 6.1.1 Connector types

Type	Quantity	Description	Connector type
4 405 4954 0	1	Pluggable cage clamp terminals, 10-pole (up to 2.5 mm <sup>2</sup> )	Type A
4 405 4956 0	1	Pluggable cage clamp terminals, 24-pole (up to 1.0 mm <sup>2</sup> )	Type C
4 405 4955 0	1	Pluggable screw terminals, 10-pole (up to 2.5 mm <sup>2</sup> )	Type B
PCD2.K22x PCD2.K23x		Ready-made system cable to connect "ribbon cable to screw terminal" adapters	Type D
4 405 4998 0	1	Pluggable cage clamp terminals, 14-pole (up to 1.5 mm <sup>2</sup> )	Type E
4 405 4936 0	(1 for A810)	Pluggable cage clamp terminals, 12-pole (up to 1.5 mm <sup>2</sup> )	Type F
PCD3.K810	(1 for A810)	Pluggable cage clamp terminals, 12-pole (as 4 405 4936 0), with 12 grouped strands, numbered, 2.5 m long	Type F
4 405 5027 0	(1 for A860)	Pluggable cage clamp terminals, 4-pole (up to 2.5 mm <sup>2</sup> )	Type G
PCD3.K860	(1 for A860)	Pluggable cage clamp terminals, 4-pole (as 4 405 5027 0), with 4 grouped strands, numbered, 2.5 m long	Type G
4 405 5028 0	(1 for A860)	Pluggable cage clamp terminals, 6-pole (up to 1.0 mm <sup>2</sup> )	Type H
PCD3.K861	(1 for A860)	Pluggable cage clamp terminals, 6-pole (as 4 405 5028 0), with 6 grouped strands, numbered, 2.5 m long	Type H
4 405 4934 0	(1 for W800)	Pluggable cage clamp terminals, 8-pole (up to 1.5 mm <sup>2</sup> )	Type J
PCD3.K800	(1 for W800)	Pluggable cage clamp terminals, 8-pole (as 4 405 4934 0), with 8 grouped strands, numbered, 2.5 m long	Type J

#### Plug-in cage clamp terminals

The plug-in cage clamp terminals simplify the installation significantly. The cage clamp terminals support cable diameters from 1.0 mm<sup>2</sup> through 1,5 mm<sup>2</sup> to 2.5 mm<sup>2</sup>.

Screwdrivers of type SDI 0.4 x 2.5 x 80 should be used (max. width: 2.5 mm).

## 6.1.2 Current consumption of the modules

Type PCD3...	Internal current consumption I from +5 V [mA]	Internal current consumption I from V+ [mA]	External current consumption I from 24 VDC
E11x	1...24	--	max. 48 mA
E16x	1...10	--	max. 64 mA
E500	1	--	--
E61x	1...24	--	max. 40/30 mA
A200	1...15	--	max. 32 mA
A210	1...15	--	max. 32 mA

H31x <sup>1), 2)</sup>	140	--	max. 15 mA

<sup>1)</sup> These I/O modules cannot currently be used with the PCD3 RIO head station

<sup>2)</sup> for H311: up to max.300 mA for the encoder, this current also loads the +5 V bus on the module

### 6.1.3 External input voltage

Type	Description	External input voltage or voltage range
------	-------------	---

#### Digital input modules

PCD3.E110	8 inputs 8 ms	24 VDC smoothed or pulsed
PCD3.E111	8 inputs 0.2 ms	24 VDC smoothed, max.ripple 10%
PCD3.E112	8 inputs 9 ms	12 VDC smoothed, max.ripple 10%
PCD3.E116	8 inputs 0.2 ms	5 VDC smoothed, max.ripple 10%
PCD3.E160	16 inputs 8 ms	24 VDC smoothed or pulsed
PCD3.E165	16 inputs 8 ms	24 VDC smoothed or pulsed
PCD3.E166	16 inputs 0.2 ms	24 VDC smoothed or pulsed
PCD3.E500	6 inputs	115/230 VAC
PCD3.E610	8 inputs 10 ms	24 VDC smoothed or pulsed
PCD3.E613	8 inputs 9 ms	48 VDC smoothed or pulsed

#### Digital output modules

PCD3.A200	4 make cont. 2 A	250 VAC, 50 VDC
PCD3.A210	4 break contacts 2 A	250 VAC, 50 VDC
PCD3.A220	6 make cont. 2 A	250 VAC, 50 VDC
PCD3.A251	6 ch/over + 2 make cont.	48 VAC, 50 VDC
PCD3.A300	6 outputs 2 A	5...32 VDC smoothed, or 10...25 VDC pulsed
PCD3.A400	8 outputs 0.5 A	5...32 VDC smoothed, or 10...25 VDC pulsed
PCD3.A410	8 outputs 0.5 A	5...32 VDC smoothed, or 10...25 VDC pulsed
PCD3.A460	16 outputs 0.5 A	10...32 VDC smoothed, max.ripple 10%
PCD3.A465	16 outputs 0.5 A	10...32 VDC smoothed, max.ripple 10%
PCD3.A810	4 outputs	250 VAC, 50 VDC
PCD3.A860	2 inputs, 2 outputs	250 VAC, 24 VDC
PCD3.B100	2 I, 2 O, 4 selectable I/O	24 VDC smoothed or pulsed

#### Analogue input modules

PCD3.W200	8 inputs 10 bit	
PCD3.W210	8 inputs 10 bit	
PCD3.W220	8 inputs 10 bit	
PCD3.W300	8 inputs 12 bit	
PCD3.W310	8 inputs 12 bit	
PCD3.W340	8 inputs 12 bit	
PCD3.W350	8 inputs 12 bit	
PCD3.W360	8 inputs 12 bit	
PCD3.W3x5	7 inputs 12 bit	

#### Analogue output modules

PCD3.W400	4 outputs 8 bit	
PCD3.W410	4 outputs 8 bit	24 VDC smoothed or pulsed
PCD3.W600	4 outputs 12 bit	
PCD3.W610	4 outputs 12 bit	24 VDC smoothed or pulsed
PCD3.W6x5	6/4 outputs 10 bit	24 VDC smoothed or pulsed
PCD3.W500	2 O 12 bit + 2 I 12 bit	
PCD3.W525	4 O 12 bit + 2 I 14 bit	
PCD3.W720	Weighing module	
PCD3.W745	Thermocouple module	
PCD3.W800	Manual control module	

#### Counting and motion control I/O modules

PCD3.H100	Counting module	5...32 VDC smoothed, max.ripple 10%
PCD3.H110	Counting module	5...32 VDC smoothed, max.ripple 10%
PCD3.H150	SSI interface module	10...32 VDC smoothed, max.ripple 10%
PCD3.H210	Motion control module	5...32 VDC smoothed, max.ripple 10%
PCD3.H310	Motion control module	24 V (19...32 VDC smoothed, max.ripple 10%)
PCD3.H311	Motion control module	5 VDC

### 6.1.4 Example I/O modules

### 6.1.5 Open the module housing

#### Open

On each of the two narrow sides of the housing are two snap-in clips. Lift these gently with your fingernails on one side then the other and separate the two parts of the housing.

#### Close

To close the housing, lay the bottom part on a flat surface (table etc.). Ensure that the circuit board is precisely located in this part of the housing. Press top part onto bottom until you hear the snap-in clips engage. Ensure that all four clips are correctly engaged.

for 5 VDC	for 12 VDC	for 24 VDC
PCD3.E116	PCD3.E112	PCD3.E110, PCD3.E111, PCD3.E160... E166

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

6.2.1 PCD3.E110/111/112/116, 8 digital inputs

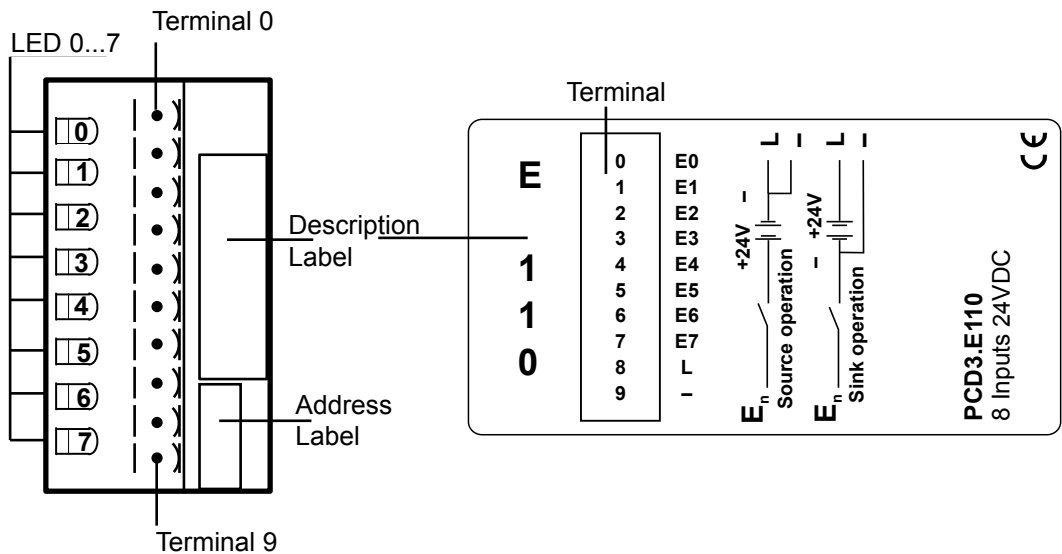

Application

Low-cost input module for source or sink operation with 8 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD3.E111 differs from the PCD3.E110 in its shorter input delay of typically 0.2 ms; the PCD3.E112 and the PCD3.E116 also differ in their lower input voltages of 12 VDC and 5 VDC.

Technical data

Number of inputs:		8 electrically connected, source or sink operation
Input voltage	E110:	24 VDC (15...30 VDC) smoothed or pulsed
	E111:	24 VDC (15...30 VDC) smoothed, max. 10 % ripple
	E112:	12 VDC (7.5...15 VDC) smoothed, max. 10 % ripple
	E116:	5 VDC (1...7 VDC) smoothed, max. 10 % ripple
	Special:	Further values on request
Input current:		6 mA at 24 VDC
Input delay	E110:	typ. 8 ms
	E111:	typ. 0.2 ms
	E112:	typ. 9 ms
	E116:	typ. 0.2 ms
Resistance to interference: acc. to IEC 801-4		2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)		1 ... 24 mA typ. 12 mA
Internal current consumption: (from V+ bus)		0 mA
External current consumption:		max. 48 mA (all inputs = 1) from 24 VDC
Terminals:		Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

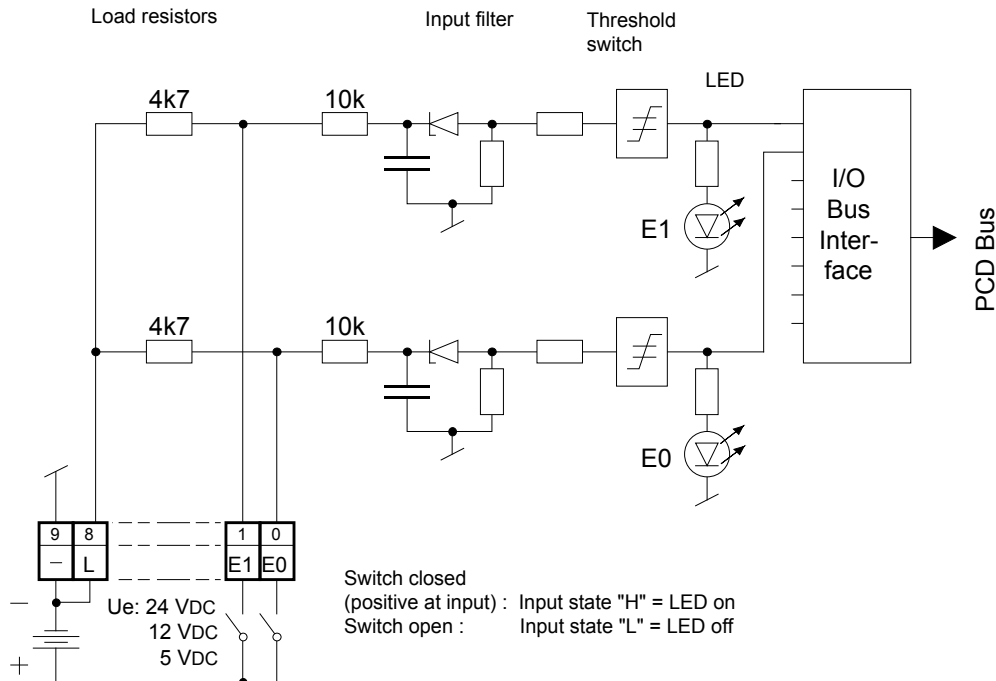

LEDs and connection terminals

## Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

### Source operation (positive logic):

### Sink operation (negative logic):

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

## 6.2.2 PCD3.E160/161, 16 digital inputs, ribbon cable connector

### Application

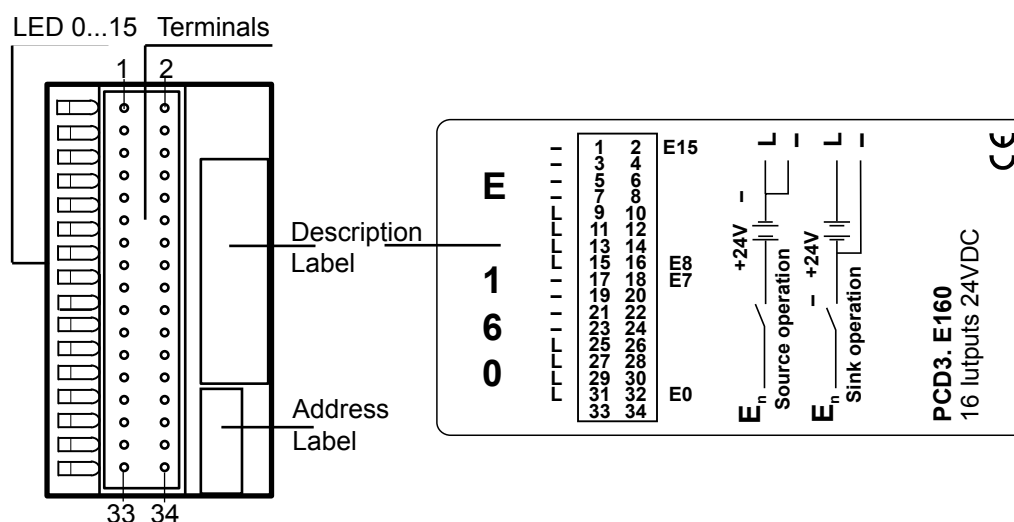

Module for source or sink operation with 16 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD3.E161 has a shorter input delay of typically 0.2 ms.

### Technical data

Number of inputs:	16	electrically connected, source or sink operation
Input voltage	E160: 24 VDC (15...30 VDC) smoothed or pulsed E161: 24 VDC (15...30 VDC) smoothed max. 10 % ripple	
Input current:	4 mA per input at 24 VDC	
Input delay	E160: typically 8 ms E161: typically 0.2 ms	
Resistance to interference: acc. to IEC1000-4-4	2 kV under capacitive coupling (whole trunk group)	
Internal current consumption: (from +5 V bus)	1...10 mA typically 8 mA	
Internal current consumption: (from V+ bus)	0 mA	
External current consumption	max. 64 mA (all inputs=1) at 24 VDC	
Terminals:	34-pole ribbon cable connector	

6

### LEDs and connection terminals

Saia Burgess Controls provides a wide range of pre-configured cables with a 34-pole ribbon connector at one or both ends.

These connection cables can be plugged at one end into the PCD3.E160 I/O module and at the other end into an I/O terminal adapter.

The following adapters are obtainable from Saia Burgess Controls: terminal adapters for connecting 3-wire sensors to individual terminals for Signal, Plus and Minus; terminal adapters for connecting 16 I/Os with and without LED and relay interface; and terminal adapters with changeover contacts for signal conversion for digital output modules.

Further information can be found in the Manual on "System cables and connection system" 26/792.

The following materials can be ordered from '3M':

- Socket connector 34-pole Type 3414-6600
- (Metal strain relief) \*) Type 3448-2034
- (Handle for socket connector 34-pole) \*) Type 3490-3

Matching cables can be ordered in reels from '3M':

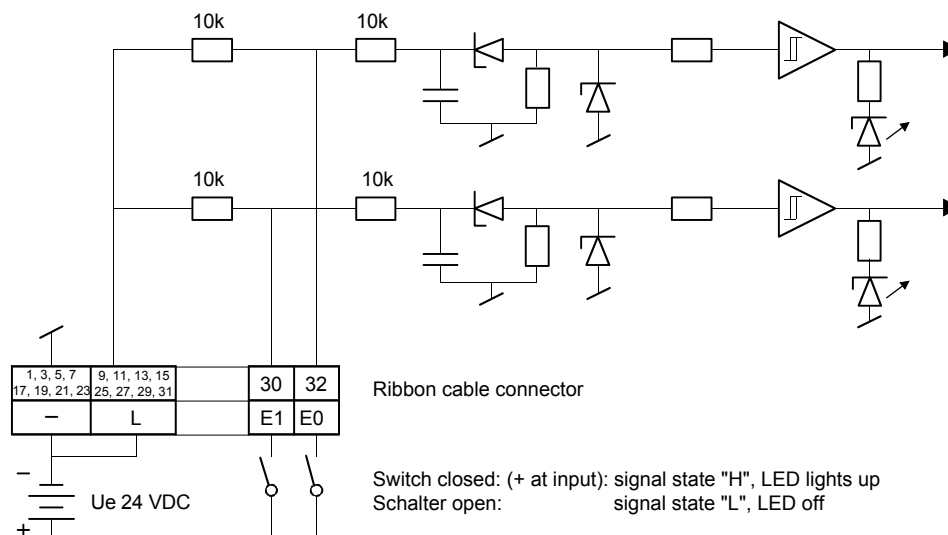

- Ribbon cable 34-pole,  
grey with pin 1 identification Type 3770/34 or 3801/34
- Round cable 34-pole,  
grey with pin 1 identification Type 3759/34  
\*) optional

### Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

6

#### Source operation (positive logic):

#### Sink operation (negative logic):

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the "Watchdog" section, which describes the correct use of the watchdog in conjunction with PCD3 components.

6.2.3 PCD3.E165/166, 16 digital inputs, cage clamp terminal connectors

Application

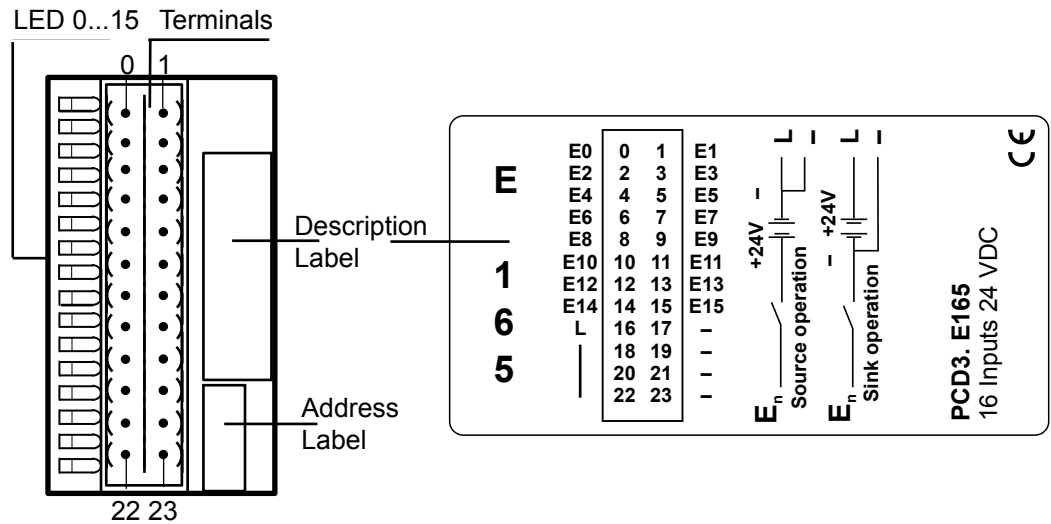

Low-cost input module for source or sink operation with 16 inputs, electrically connected. Suitable for most electronic and electromechanical switching elements at 24 VDC. The PCD3.E166 differs from the PCD3.E165 in its shorter input delay, typically 0.2 ms.

Technical data

Number of inputs:	16	electrically connected, source or sink operation
Input voltage	E165: 24 VDC (15...30 VDC) smoothed or pulsed E166: 24 VDC (15...30 VDC) smoothed max. 10 % ripple	
Input current:	4 mA per input at 24 VDC	
Input delay	E165: typically 8 ms E166: typically 0.2 ms	
Resistance to interference: acc. to IEC1000-4-4	2 kV under capacitive coupling (whole trunk group)	
Internal current consumption: (from +5 V bus)	1...10 mA typically 8 mA	
Internal current consumption: (from V+ bus)	0 mA	
External current consumption	max. 64 mA (all inputs=1) at 24 VDC	
Terminals:	Pluggable 24-pole spring terminal block (4 405 4956 0), for Ø up to 1 mm²,	

6

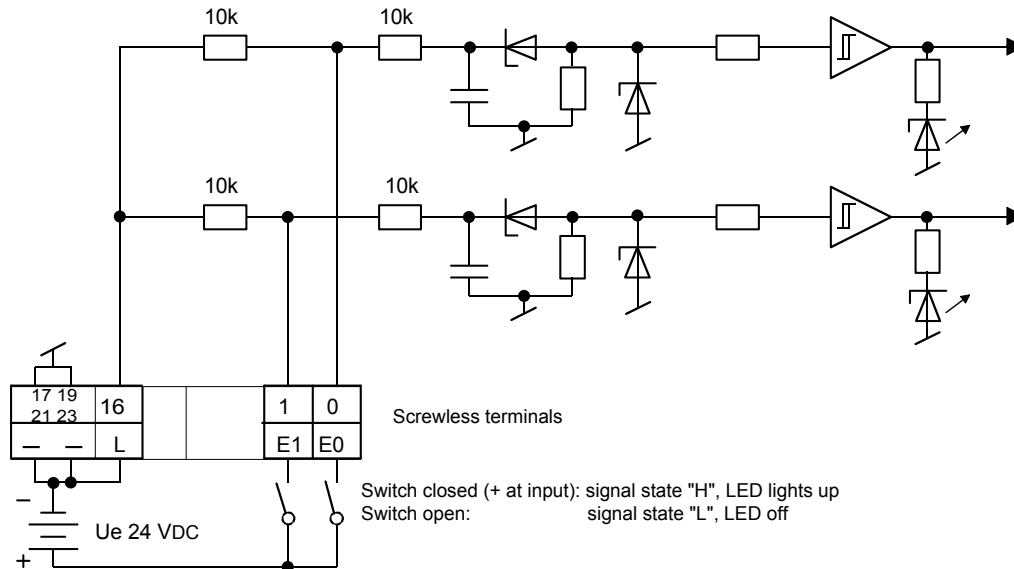

LEDs and connection terminals

## Input circuits and terminal designation

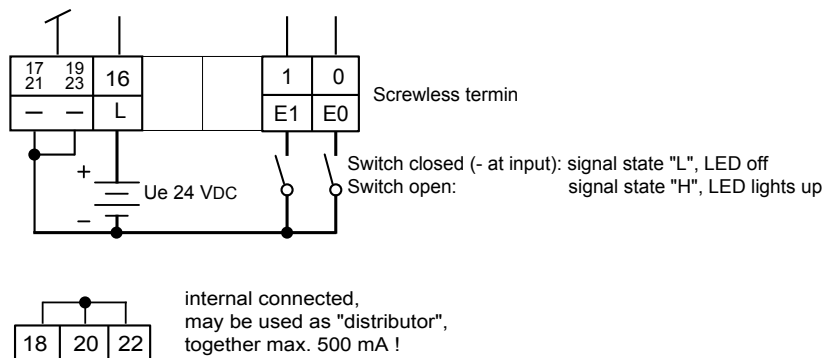

Depending on external wiring, this module may be used for source or sink operation.

### Source operation (positive logic):

6

### Sink operation (negative logic):

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the "Watchdog" section, which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.3 Digital input modules, electrically isolated from the I/O Bus

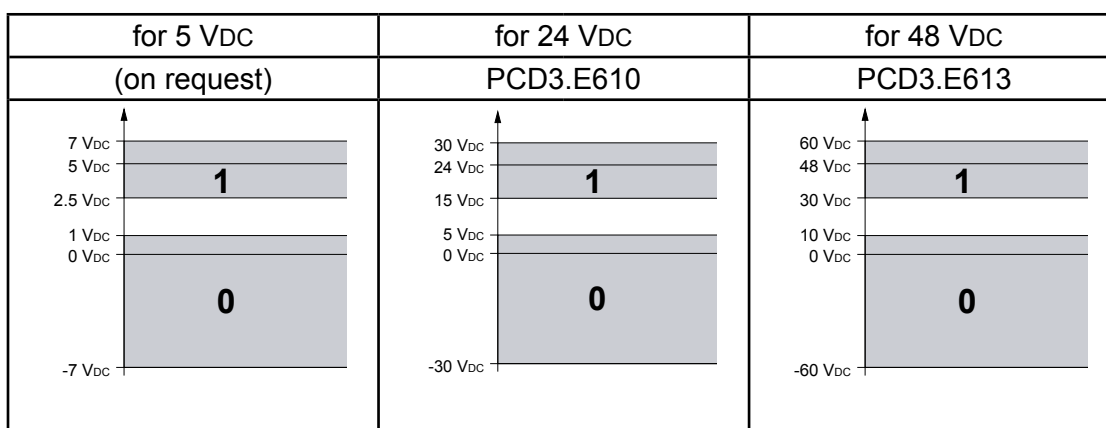

<b>PCD3.E500</b>	<b>6 inputs for 115 ... 230 VAC</b>
<b>PCD3.E610</b>	<b>8 inputs 24 Vdc, 10 ms</b>
<b>PCD3.E613</b>	<b>8 inputs 48 Vdc, 9 ms</b>

Electrical isolation of inputs to the Saia PCD®.

The channels are not isolated from each other

#### Definition of input signals

6

#### Installation instructions

For reasons of safety it is not permissible to connect low voltages (up to 50V) and higher voltages (50...250 V) to the same module.

If a Saia PCD® module is connected to a higher voltage (50...250 V), approved components for this voltage must be used for all elements that are electrically connected to the system.

Using higher voltage (50...250V), all connections to the relay contacts must be connected on the same circuit, i.e. in such a way that they are all protected against one AC phase by one common fuse. Each load circuit may however be fused individually.

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

6.3.1 PCD3.E500, 6 digital inputs, electrically isolated from the I/O Bus

Application

Module with 6 electrically isolated inputs for alternating current. The inputs are set up for source operation and have one common "COM" terminal. Only the positive half-wave of the alternating current is used.

Technical data

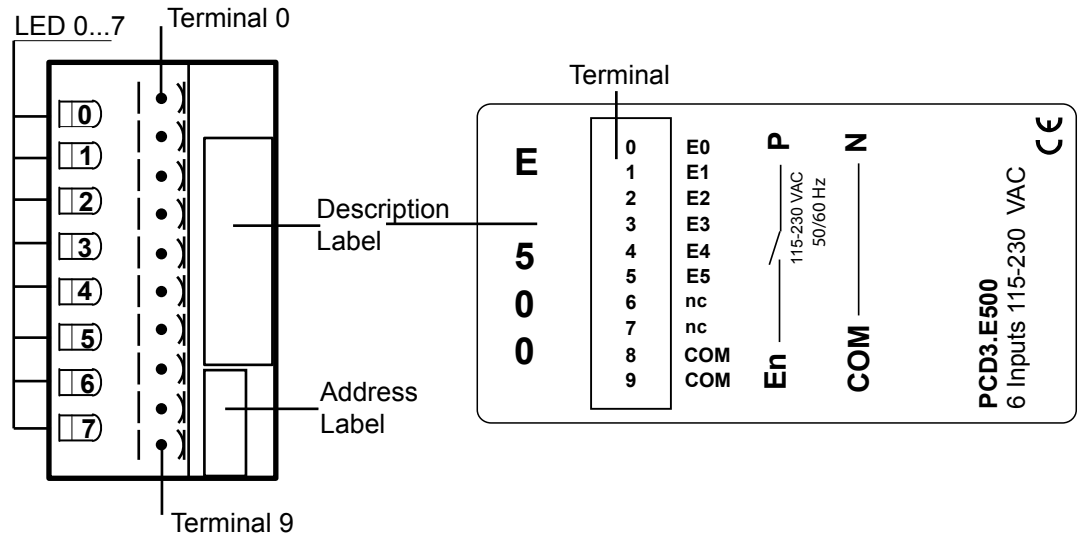

Number of inputs	6 electrically isolated from the CPU, source operation, all inputs to the module in the same phase
Input voltage	115/230 V 50/60 Hz, sinusoidal (80 to 250 VAC)
Input current	115 VAC: 5...6 mA (wattless current) 230 VAC: 10...12 mA (wattless current)
Input delay switch-on: switch-off:	typ. 10 ms; max. 20 ms typ. 20 ms; max. 30 ms
LED	supplied directly from input current
Resistance to interference acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Electrical isolation voltage	2000 VAC, 1 min
Electrical isolation resistance	100 MΩ / 500 VDC
Optocoupler isolation voltage	2.5 kV
Internal current consumption: (from +5 V bus)	< 1 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	0 mA
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

6

LEDs and connection terminals

6

Input circuits and terminal designation

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.3.2 PCD3.E610/613, 8 digital inputs, electrically isolated from the I/O Bus

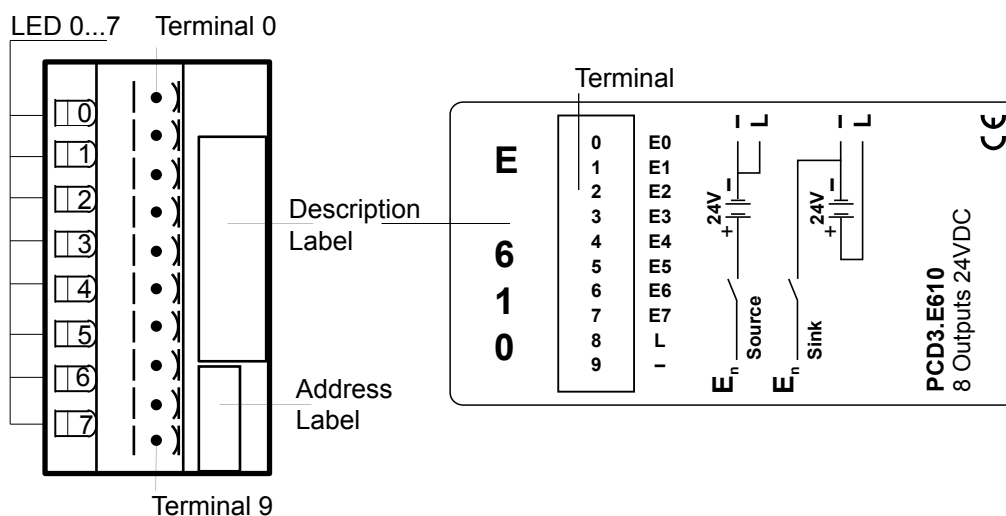

#### Application

Input module for source or sink operation with 8 inputs, electrically isolated by optocoupler. Suitable for most electronic and electromechanical switching elements at 24 VDC.

#### Technical data

Number of inputs:	8 electrically isolated by optocoupler, source or sink operation, all inputs to the model in the same phase		
Input voltage	E610: E613:	24 VDC (15...30 VDC) smoothed or pulsed 48 VDC (30...60 VDC) smoothed max. 10 % ripple	
Supply voltage:		E610:	E613:
for source operation:	min.	15 V	30 V
for sink operation:	min.	18 V	36 V
Input current:		E610:	E613:
(at input voltage)		(24 VDC)	(48 VDC)
for source operation:		5 mA	2 mA
for sink operation:		3.7 mA	1.5 mA
Input delay (0-1/1-0):		E610:	E613:
	incl.	10 ms	9 ms
	excl.	10 ms	9 ms
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)		
Electrical isolation voltage:	1000 VAC, 1 min.		
Optocoupler isolation voltage:	2.5 kV		
	Electrical isolation of outputs to the Saia PCD®. The channels are not isolated from each other		
Internal current consumption: (from +5 V bus)	1...24 mA typ. 12 mA		
Internal current consumption: (from V+ bus)	0 mA		
External current consumption:	max. 40 mA (all inputs=1) at 24 VDC, (source operation), max. 18 mA (sink operation)		
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²		

## LEDs and connection terminals

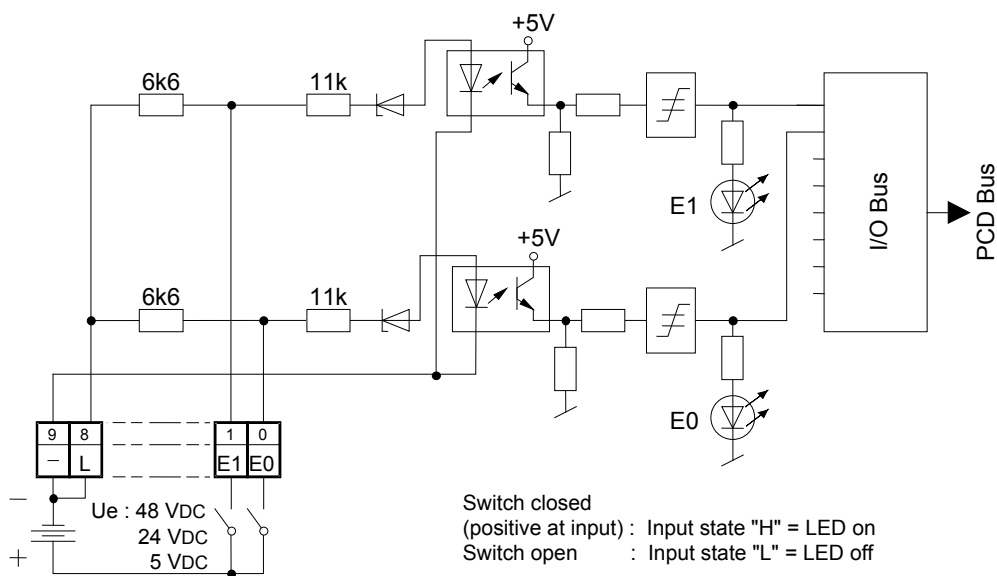

6

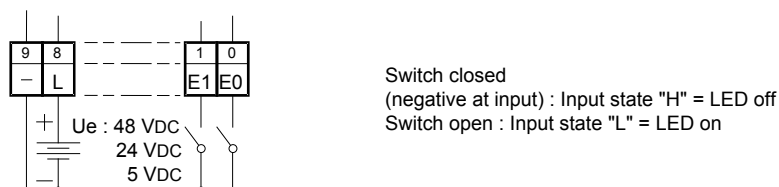

## Input circuits and terminal designation

Depending on external wiring, this module may be used for source or sink operation.

### Source operation (positive logic):

### Sink operation (negative logic):

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

## 6.4 Digital output modules

PCD3.A300	6 outputs 2 A
PCD3.A400	8 outputs 0.5 A
PCD3.A460	16 outputs 0.5 A, connection via 34-pole ribbon connector
PCD3.A465	16 outputs 0.5 A, connection via 24-pole spring terminal block

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

**6**

6.4.1 PCD3.A300, 6 digital outputs for 2 A each

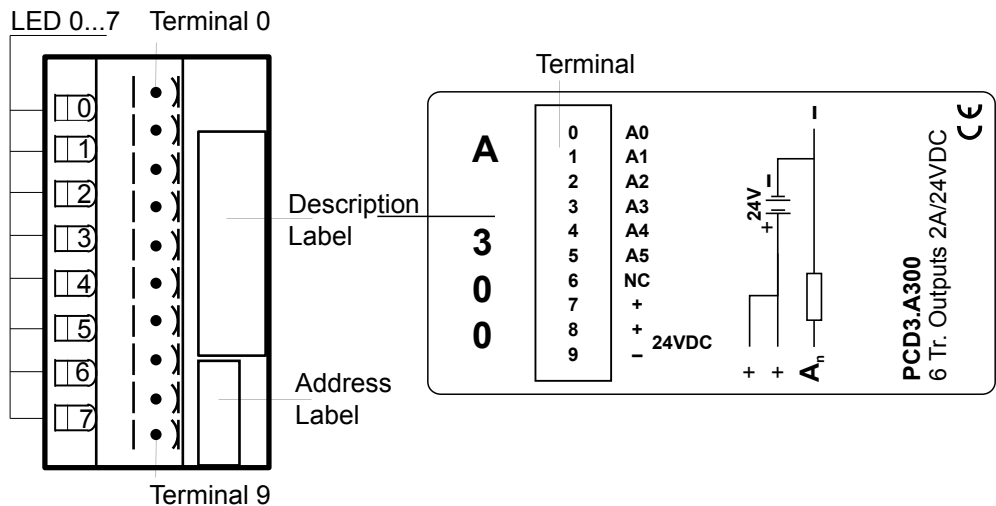

Application

Low cost output module with 6 transistor outputs 5 mA...2 A, without short-circuit protection. The individual circuits are electrically connected; the voltage range is 10...32 VDC.

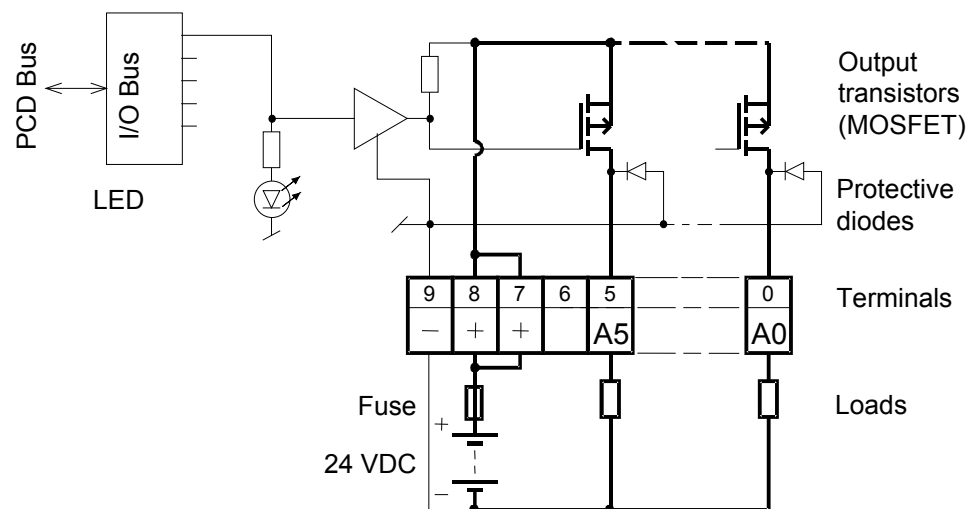

Technical data

Number of outputs:	6, electrically connected
Output current:	5 mA...2 A (leakage current max. 0.1 mA)
Total current per module:	6×2 A = 12 A (on 100% duty cycle)
Operating mode:	Source operation (positive switching)
Voltage range:	10...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	0.2V at 2 A
Output delay:	Switch-on delay <1 µs Switch-off delay <200 µs with inductive loads the delay is longer, because of the protective diode.
Isolation voltage:	1000 VAC, 1 min
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...20 mA typically 12 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Plug-in 10-pole spring terminal block(4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

LEDs and connection terminals

### Output circuits and terminal designation

Output conducting (set): LED on  
 Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) fuse of max. 12.5 A.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

6.4.2 PCD3.A400, 8 digital outputs for 0.5 A each

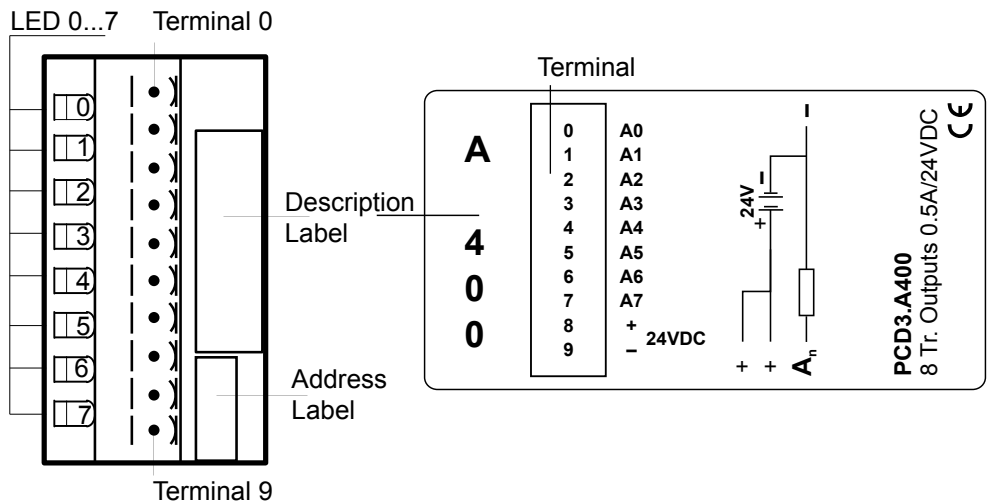

Application

Low cost output module with 8 transistor outputs 5...500 mA, without short circuit protection. For non-isolated circuits in the voltage range 5...32 VDC.

Technical data

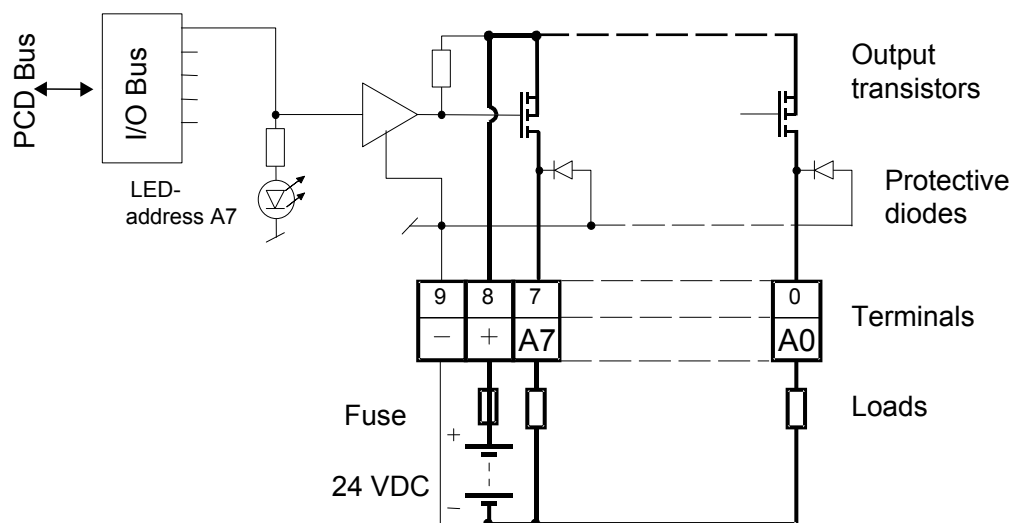

Number of outputs:	8, electrically connected
Output current:	5...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 Ω.
Total current per module:	4 A on 100% duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	5...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	≤ 0.4V at 0.5 A
Output delay:	Switch-on delay typ. 10 μs Switch-off delay typically 50 μs (ohmic load 5...500 mA), longer with inductive load, because of the protective diode.
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

LEDs and connection terminals

## Output circuits and terminal designation

Output conducting (set): LED on  
 Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) 4 A fuse.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD2 components.

6.4.3 PCD3.A460, 16 digital outputs for 0.5 A each, with ribbon cable connector

Application

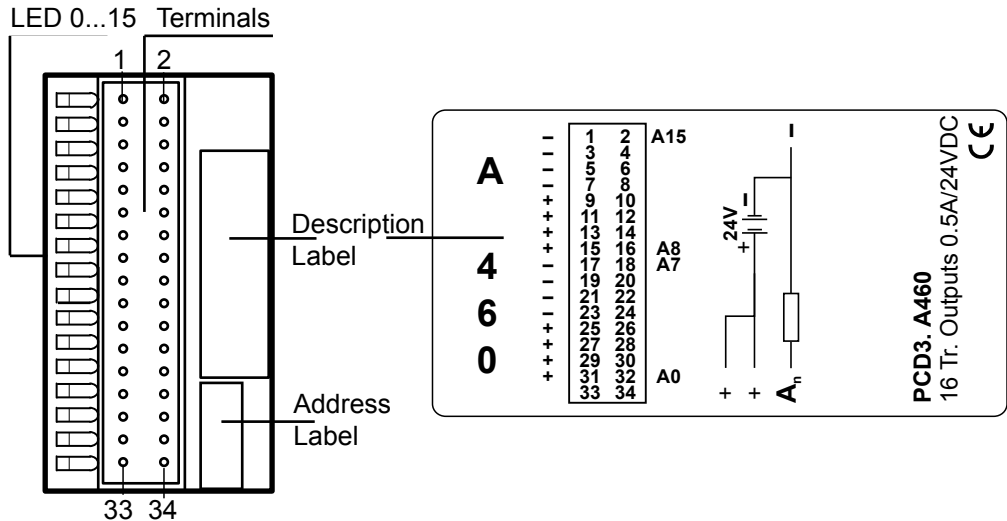

Low cost output module with 16 transistor outputs 5...500 mA, with short-circuit protection. The individual circuits are electrically connected; the voltage range is 10...32 VDC.

Technical data

Number of outputs:	16, electrically connected
Output current:	5...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 Ω.
Short circuit protection	yes
Total current per module:	8 A on 100% duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	10...32 VDC, smoothed, max. 10% ripple
Voltage drop:	max. 0.3 V at 0.5 A
Output delay:	typ.50 µs, max. 100 µs under ohmic load
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	max 10 mA (all outputs = "1") typically 8 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	34-pole ribbon cable connector

6

LEDs and connection terminals

Saia Burgess Controls provides a wide range of pre-configured cables with a 34-pole ribbon connector at one or both ends.

These connection cables can be plugged at one end into the PCD3.E160 I/O module and at the other end into an I/O terminal adapter.

The following adapters are obtainable from Saia Burgess Controls: terminal adapters for connecting 3-wire sensors to individual terminals for Signal, Plus and Minus; terminal adapters for connecting 16 I/Os with and without LED and relay interface; and terminal adapters with changeover contacts for signal conversion for digital output modules.

Further information can be found in the Manual on "System cables and connection system" 26/792.

## Output circuits and terminal designation

6

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the "Watchdog" section, which describes the correct use of the watchdog in conjunction with PCD3 components.

## 6.5 Digital output modules, electrically isolated

PCD3.A200	4 make contacts 2 A
PCD3.A210	4 break contacts 2 A
PCD3.A220	6 make contacts 2 A
PCD3.A251	6 changeover contacts + 2 make contacts 2 A, 24-pole cage clamp terminal block
PCD3.A410	8 outputs 0.5 A

### Installation instructions

For reasons of safety it is not permissible to connect low voltages (up to 50 V) and higher voltages (50...250 V) to the same module.

If a Saia PCD® module is connected to a higher voltage (50...250 V), approved components for this voltage must be used for all elements that are electrically connected to the system.

Using higher voltage (50...250 V), all connections to the relay contacts must be connected on the same circuit, i.e. in such a way that they are all protected against one AC phase by one common fuse. Each load circuit may however be fused individually.

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts. For safe switching and a long service life, these figures must be observed.

### 6.5.1 PCD3.A200, 4 relays with make contacts, with contact protection

#### Application

The module contains 4 relays with normally-open contacts for direct or alternating current up to 2 A, 250 VAC. The contacts are protected by a varistor and an RC element. The module is especially suited wherever perfectly isolated AC switching circuits with infrequent switching have to be controlled.

#### Technical data

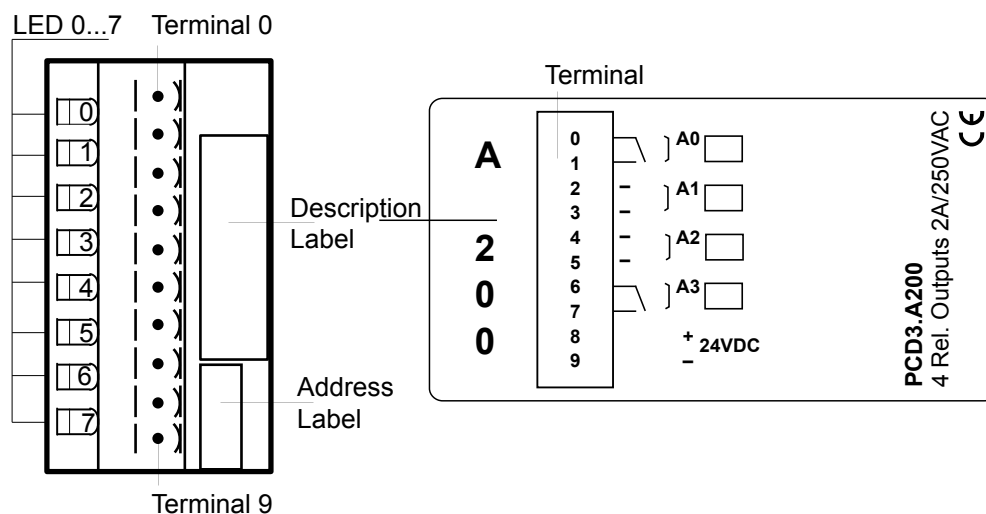

Number of outputs:	4, electrically isolated make contacts
Type of relay (typical):	RE 03 0024, SCHRACK
Switching capacity: (contact lifetime)	2A, 250 VAC AC1 0.7 x 10 <sup>6</sup> operations 1 A, 250 VAC AC11 1.0 x 10 <sup>6</sup> operations 2 A, 50 VDC DC11 0.3 x 10 <sup>6</sup> operations <sup>3)</sup> 1 A, 24 VDC DC11 0.1 x 10 <sup>6</sup> operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20°C: 17.0...35 VDC 30°C: 19.5...35 VDC 40°C: 20.5...32 VDC 50°C: 21.5...30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...15 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 32 mA
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

6

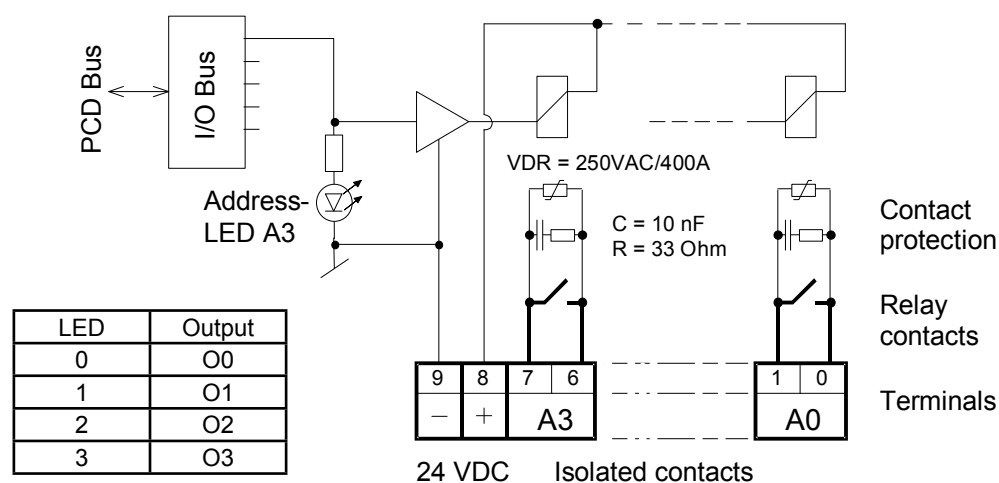

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts. For safe switching and a long service life, these figures must be observed.

## LEDs and connection terminals

6

## Output circuits and terminal designation

Relay energized (contact closed): LED on  
 Relay reset (contact open): LED off  
 24 VDC must be connected to the +/- terminals.

With an open relay contact, the current leakage through the contact protection is **0.7 mA** (at 230 V / 50 Hz). This should be taken into account for smaller AC loads. If this is too high, it is recommended to use a PCD3.A220 module (without contact protection).

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

## 6.5.2 PCD3.A210, 4 relays with break contacts, with contact protection

### Application

The module contains 4 relays with normally-closed contacts for direct or alternating current up to 2 A, 250 VAC. The contacts are protected by a varistor. The module is especially suited wherever perfectly isolated AC switching circuits with infrequent switching have to be controlled.

### Technical data

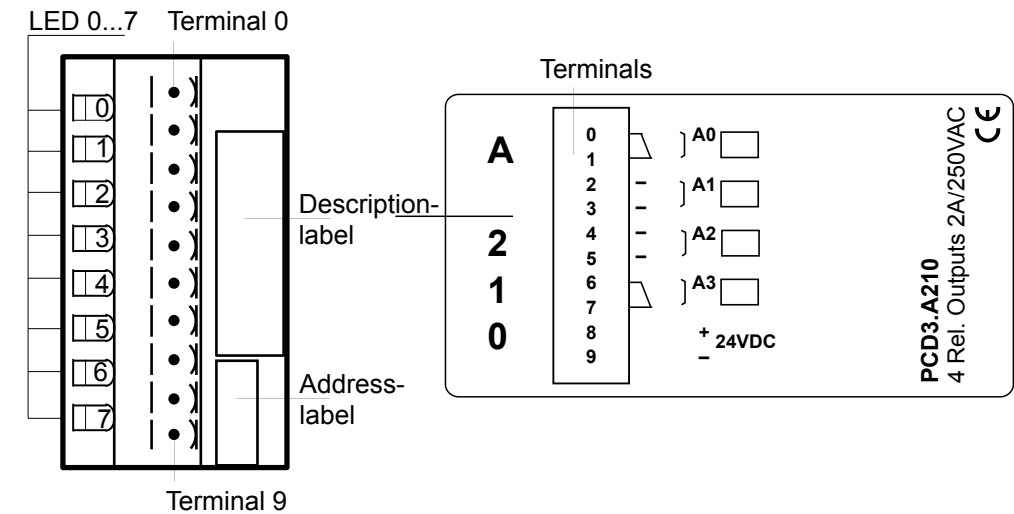

Number of outputs:	4, electrically isolated break contacts
Type of relay (typical):	RE 01 4024, SCHRACK
Switching capacity: (contact lifetime)	2 A, 250 VAC AC1      0.7 x 10 <sup>6</sup> operations 1 A, 250 VAC AC11     1.0 x 10 <sup>6</sup> operations 2 A, 50 VDC DC11      0.3 x 10 <sup>6</sup> operations <sup>3)</sup> 1 A, 24 VDC DC11      0.1 x 10 <sup>6</sup> operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 9 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20°C: 17.0...35 VDC 30°C: 19.5...35 VDC 40°C: 20.5...32 VDC 50°C: 21.5...30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...15 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 32 mA
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or plug-gable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

6

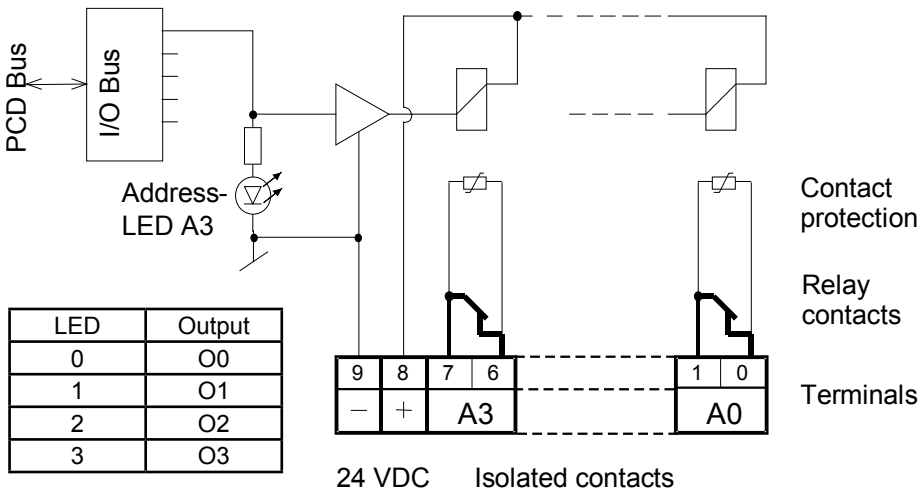

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts. For safe switching and a long service life, these figures must be observed.

LEDs and connection terminals

6

Output circuits and terminal designation

Relay energized (contact open): LED on  
Relay reset (contact closed): LED off  
24 VDC must be connected to the +/- terminals.

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

### 6.5.3 PCD3.A220, 6 relays with make contacts, without contact protection

#### Application

The module contains 6 relays with normally-open contacts for direct or alternating current up to 2 A, 250 VAC. The module is especially suited wherever AC switching circuits with infrequent switching have to be controlled. For space reasons, there is no integrated contact protection. Each group of 3 relays has a common connection.

#### Technical data

Number of outputs:	3+3 make contacts with common terminal
Type of relay (typical):	RE 03 0024, SCHRACK
Switching capacity: (contact lifetime)	2A, 250 VAC AC1 $0.7 \times 10^6$ operations 1 A, 250 VAC AC11 $1.0 \times 10^6$ operations 2 A, 50 VDC DC11 $0.3 \times 10^6$ operations <sup>3)</sup> 1 A, 24 VDC DC11 $0.1 \times 10^6$ operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20°C: 17.0...35 VDC 30°C: 19.5...35 VDC 40°C: 20.5...32 VDC 50°C: 21.5...30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...20 mA typically 10 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 48 mA
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

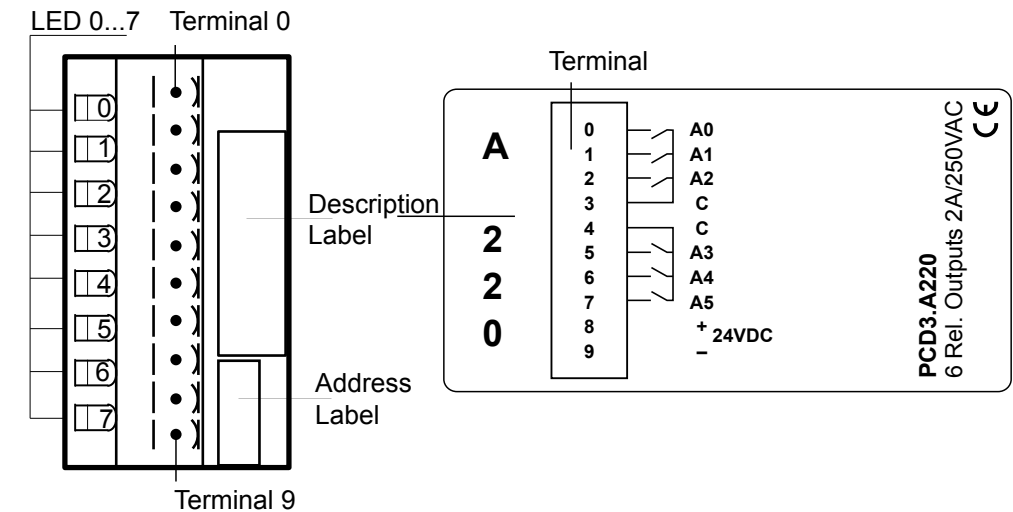

6

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts.

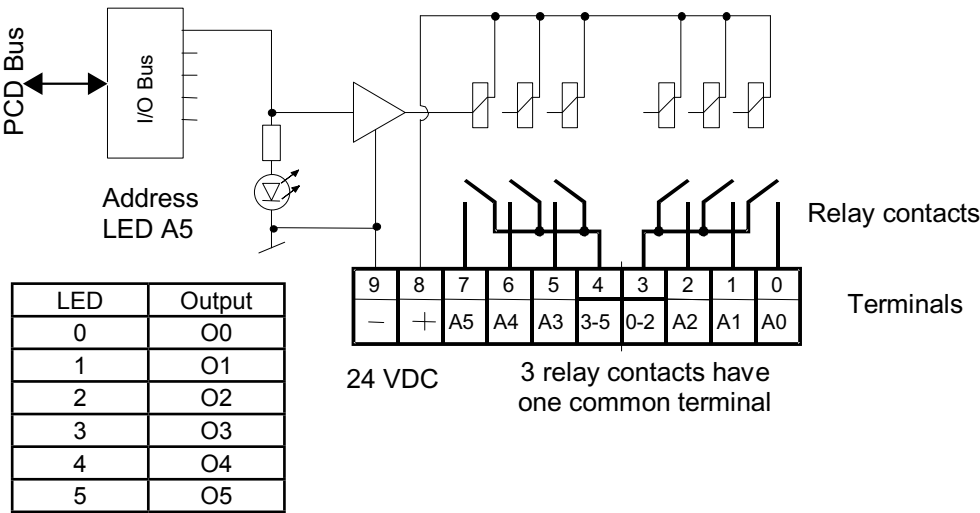

For safe switching and a long service life, these figures must be observed.

LEDs and connection terminals

6

Output circuits and terminal designation

Relay energized (contact closed): LED on  
Relay reset (contact open): LED off  
24 VDC must be connected to the +/- terminals.

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

#### 6.5.4 PCD3.A251, 8 relays, 6 with changeover contacts, 2 with make contacts

##### Application

The module contains 8 relays for direct or alternating current up to 2 A, 48 VAC. 6 of them have changeover contacts and 2 of them make contacts. The module is especially suited wherever AC switching circuits with infrequent switching have to be controlled. For space reasons, there is no integrated contact protection.

##### Technical data

Number of outputs:	6 changeover contacts and 2 make contacts.
Relay type:	RE 014024, SCHRACK
Operating mode:	> 12 V, > 100 mA
Switching capacity: *) (contact lifetime)	2A, 48 VAC AC1 0.7 x 10 <sup>6</sup> operations 1 A, 48 VAC AC11 1.0 x 10 <sup>6</sup> operations 2 A, 50 VDC DC1 0.3 x 10 <sup>6</sup> operations <sup>3)</sup> 1 A, 24 VDC DC11 0.1 x 10 <sup>6</sup> operations <sup>1)3)</sup>
Relay coil supply: <sup>2)</sup>	nominal 24 VDC smoothed or pulsed, 8 mA per relay coil
Voltage tolerance, dependent on ambient temperature:	20°C: 17.0...35 VDC 30°C: 19.5...35 VDC 40°C: 20.5...32 VDC 50°C: 21.5...30 VDC
Output delay:	typically 5 ms at 24 VDC
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 64 mA
Terminals:	Pluggable 24-pole spring terminal block (4 405 4956 0), for Ø up to 1 mm <sup>2</sup> ,
<sup>1)</sup> With external protective diode <sup>2)</sup> With reverse voltage protection <sup>3)</sup> These ratings are not UL-listed	

6

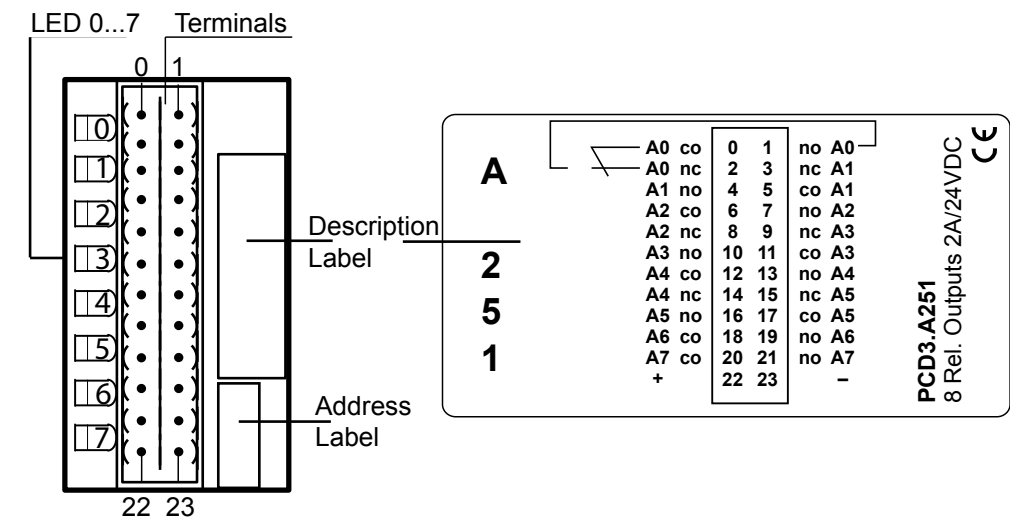

\*) Higher voltages are not allowed for this module because clearances between circuit paths too small.

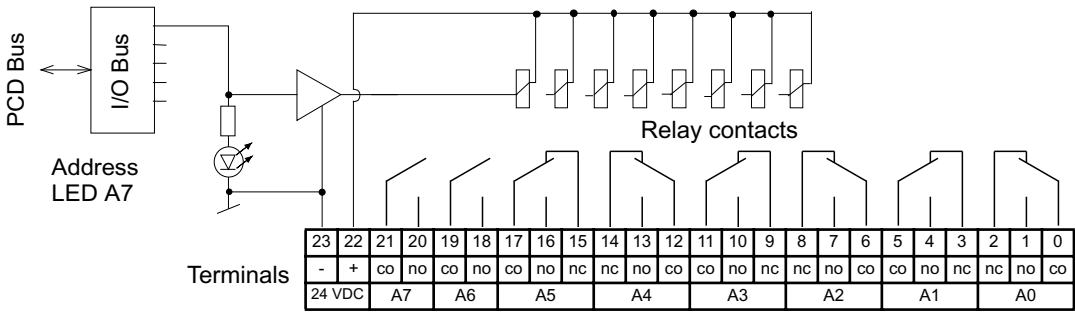

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts. For safe switching and a long service life, these figures must be observed.

LEDs and connection terminals

6

Output circuits and terminal designation

Relay energized (contact closed): LED on  
Relay reset (contact open): LED off  
24 VDC must be connected to the +/- terminals.

LED	Outputs
0	O0
1	O1
2	O2
3	O3
4	O4
5	O5
6	O6
7	O7

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

### 6.5.5 PCD3.A410, 8 digital outputs for 0.5 A each, electrically isolated

#### Application

Output module, electrically isolated from the CPU, with 8 MOSFET transistor outputs, without short-circuit protection. Voltage range 5...32 VDC.

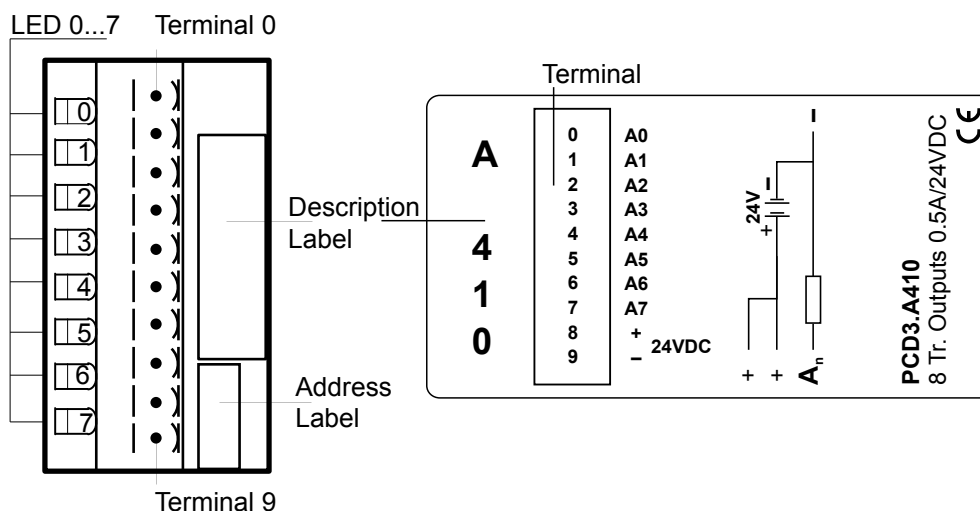

This module is not suitable for triggering the PCA2.D12/D14 display modules.

#### Technical data

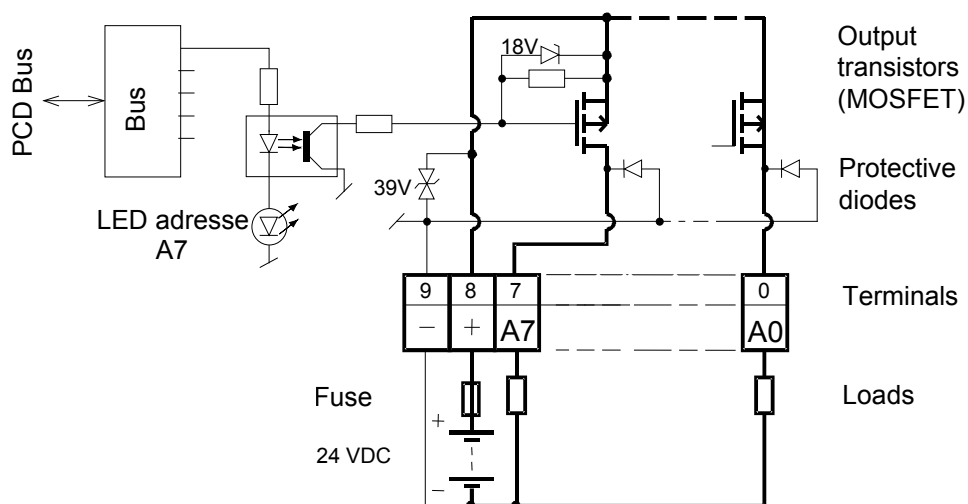

Number of outputs:	8, electrically isolated
Output current:	1...500 mA (leakage current max. 0,1 mA) Within the voltage range 5...24 VDC, the load resistance should be at least 48 Ω.
Total current per module:	4 A on 100% duty cycle
Operating mode:	Source operation (positive switching)
Voltage range:	5...32 VDC, smoothed 10...25 VDC, pulsed
Voltage drop:	≤ 0.4 V at 0.5 A
Output delay:	Switch-on delay typ. 10 µs Switch-off delay typically 50 µs (ohmic load 5...500 mA), longer with inductive load, because of the protective diode.
Isolation voltage:	1000 VAC, 1 min
Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...24 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>

## LEDs and connection terminals

6

## Output circuits and terminal designation

Output conducting (set): LED on  
Output disconnected (reset): LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow (S) 4 A fuse.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

## 6.6 Digital output modules for manual operation, electrically isolated

PCD3.A810	Manual control module, with 2 changeover and 2 make contacts
PCD3.A860	Light and shade module, with 2 make contacts

The Annex, Section A.3 "Relay contacts" contains measurement details and suggested wiring for the relay contacts.

For safe switching and a long service life, these figures must be observed.

## 6.6.1 PCD3.A810, Digital manual control module with 4 relays, 2 with changeover, 2 with make contacts

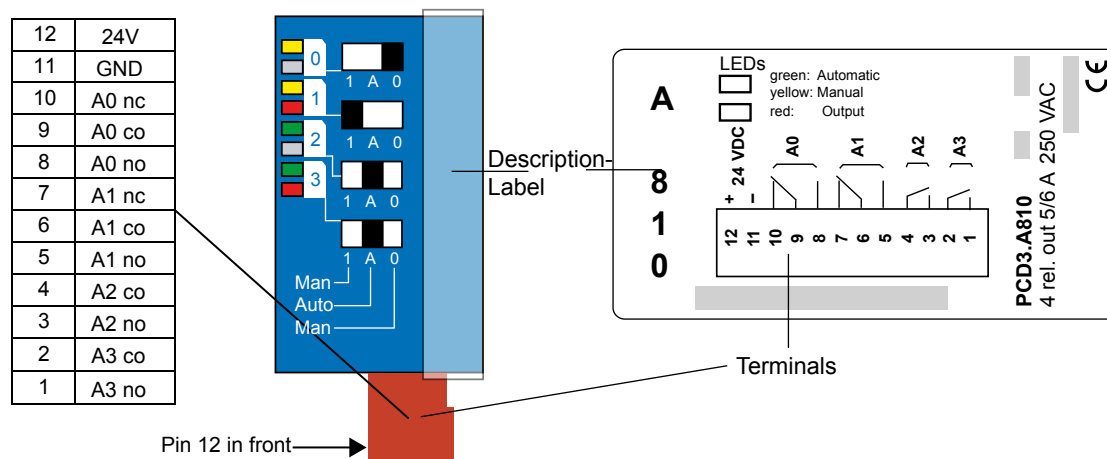

### Application

The module has 4 relay outputs: 2 changeover and 2 make contacts. Each channel has a switch with the settings MAN 1, AUTO, MAN 0. On MAN 0, the relay is always switched off; on MAN 1 it is always switched on; on AUTO the switch state is defined by the application program. This is not an emergency module that will work even when the Saia PCD® is switched off (or defective). The external 24 V supply feeds only the relays, and not the logic. For space reasons, there is no integrated contact protection (for emergency and manual operation, see also section 3.20).

### Technical data

Number of outputs:	4, 2 changeover (O 0, 1) and 2 make contacts (O 2, 3)
<b>Switching capacity</b>	
Relay type changeover (O 0, 1):	RE 01 4024, SCHRACK
Operating mode:	> 12 V, > 100 mA
Max. switching current:	5 A, 250 VAC AC1
Contact lifetime *):	5 A, 250 VAC AC1 $1.5 \times 10^5$ operations 2 A, 250 VAC AC15 $1.2 \times 10^5$ operations cosφ=0.3
Relay type make (O 2, 3):	RE 03 0024, SCHRACK
Operating mode:	> 12 V, > 100 mA
Max. switching current:	6 A 250 VAC AC1
Contact lifetime *):	6 A, 250 VAC AC1 $1 \times 10^5$ operations 2 A, 250 VAC AC11 $4 \times 10^5$ operations
*) there are no suppressors fitted to the module; these must be provided externally	
Switching delay:	typically 5 ms at 24 VDC
Internal current consumption: (from +5 V bus)	max. 45 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 45 mA
Relay coil supply:	nom. 24 VDC smoothed or pulsed, reverse voltage protected
Voltage tolerance, dependent on ambient temperature:	20°C: 21.5...32 VDC 30°C: 21.9...32 VDC 40°C: 22.3...32 VDC 50°C: 22.8...32 VDC
<b>Isolation</b>	
Withstand voltage - coil contacts	4 kV (relay details)
Withstand voltage - open contact circuit	1 kV (relay details)
Terminals:	Plug-in 12-pole spring terminal block (4 405 4936 0), for Ø up to 1.5 mm², or as above with 12 grouped strands, numbered, 2.5 m long (PCD3.K810)
The supply to the relay coils is not electrically isolated from the Saia PCD® side. General technical specifications as per CL-EPC-015 Rev. 02	

## LEDs and connection terminals

6

## Control elements

Each channel has a toggle switch with three settings

Manual on, Auto, Manual off.

There are 2 LEDs fitted per channel:

The upper LED is two-colour and displays the operating mode for the channel:

amber = Manual; green = Automatic

The lower LED displays the switch state of the relay:

Red = relay activated.

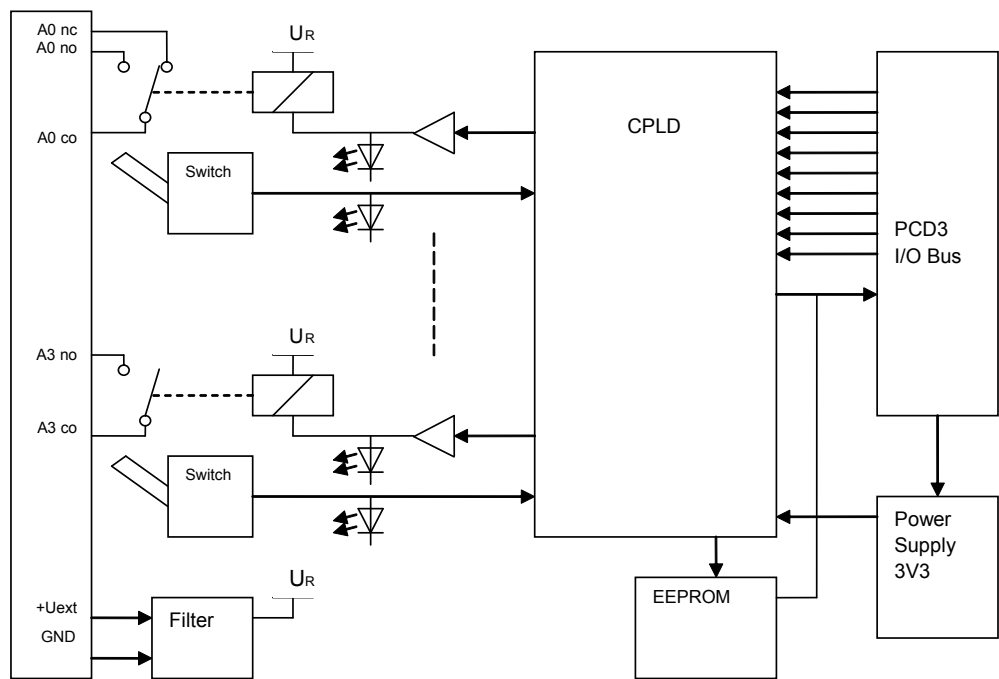

Example (above):

Output 0:	Manual off	LED 1 = amber
	Relay off	LED 2 = off
Output 1:	Manual on	LED 1 = amber
	Relay on	LED 2 = red
Output 2:	Automatic	LED 1 = green
	Relay off	LED 2 = off
Output 3:	Automatic	LED 1 = green
	Relay on	LED 2 = red

If there is no external supply to the relay coils, the LED does not light up and the relays are not activated.

There is no error message to the Saia PCD® where the electrical supply is not present.

Block diagram

6

Addressing

The PCD3.A810 occupies 16 addresses, of which 8 are used:

Address + BA	Data read (inputs)	Data write (outputs)
0	Switch state: Output 0	Output 0
1	Switch state: Output 1	Output 1
2	Switch state: Output 2	Output 2
3	Switch state: Output 3	Output 3
4		
5		
6		
7		
8	Switch: Output 0 (0=auto;1=man)	
9	Switch: Output 1 (0=auto;1=man)	
10	Switch: Output 2 (0=auto;1=man)	
11	Switch: Output 3 (0=auto;1=man)	
12		
13		
14		
15		

No FBs or FBoxes are required; the module can be addressed in the same way as a normal relay module. At addresses 0...3, the relay outputs are written to and the effective switch state of the outputs is read back. The effective switch state is displayed at these addresses in manual operation also. However, the display of the switch state does not indicate whether the external relay supply is present - just as with normal output modules. The operating mode (Auto or Manual) for each channel can be read at input addresses 8...11; "0" = Auto; "1" = Man.

**Restrictions (not applicable with cables, hardware version B)**

For the I/O connectors set out below, the following restrictions must be observed:

**...on the PCD3.Mxxxx CPUs:**

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

The Ethernet cable can be plugged in, but (depending on the RJ-45 cable) may touch the I/O connection to the module if in Slot 0.

**...on the PCD3.Cxxx module holders:**

**No** restriction, where the PCD3.K010 connector is used to connect to other module holders (the supply connector can also be plugged in to the C200 with no problems).

If a PCD3.K106/116 cable is used to connect from the preceding module holder or to the next module holder, do **not** plug the module into Slot 0 (far left) and do **not** plug into Slot 3 (far right).

**...on PCD3.T76x head stations:**

All angled Profibus connectors with max. height 40 mm can be used, e.g.

- ERNI, angled (light grey)
- Siemens "PROFIBUSCONNECTOR" 6ES7, angled (dark grey) with optional termination resistors
- VIPA 972-0DP10, angled (metallic)

To plug in or remove the Profibus connector, remove the module. A second Profibus cable to extend the network cannot be plugged directly into the first Profibus connector. There are no problems with the RS-232 cable and the supply connector, which can be plugged in with the module in place.

If a Profibus connector with height > 40 mm is used, the module **cannot** be plugged in to Slot 0, e.g. with:

- WAGO 750-970 (height=42mm, contacts the I/O connector)

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

PCD3.K106/116 cable, hardware version B, with 90° angled connector

## 6.6.2 PCD3.A860, digital light and shade module, with 2 make contacts

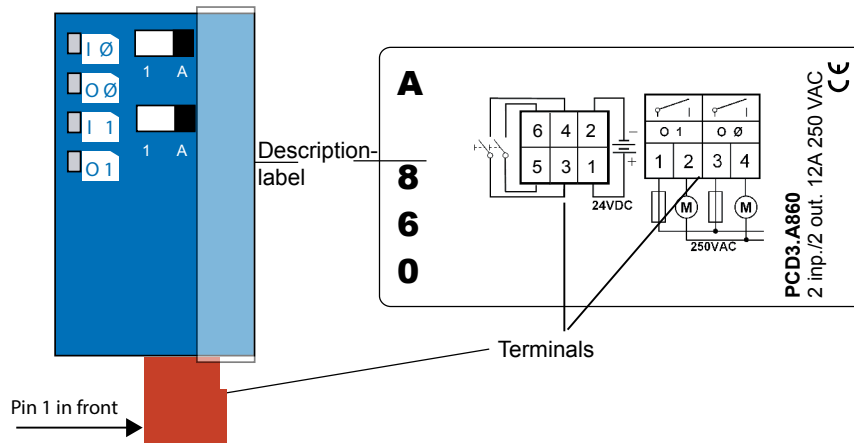

### Application

The module is a light and shade module with a manual control option. The desired functionality can be selected in the user program. There are two efficient make contacts (without suppressors) and 2 digital inputs. It is also possible to operate this module in "transparent mode". In this mode, the module is a pure I/O module with two inputs/outputs.

### Technical data

Digital inputs:	2
Digital outputs:	2
Contact type	2 make contact
Nominal voltage:	12 A / 250 VAC each
Peak start-up current (20 ms):	80 A (AC)
Reverse voltage protection ( $U_{ext}$ ):	yes
Time constant of input filter:	typically 6 ms
Internal current consumption: (from +5 V bus)	max. 40 mA (both input LEDs on)
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 40 mA (both relay coils live, both output LEDs on)
Terminals, Relay outputs:	1 x pluggable 4-pole cage clamp terminal block (4 405 5027 0), for wires up to 2.5 mm <sup>2</sup> , or as above with 4 grouped strands, numbered, 2.5 m long (PCD3.K860)
Sensor inputs:	1 x pluggable 6-pole cage clamp terminal block (4 405 5028 0), for wires up to 1.0 mm <sup>2</sup> , or as above with 6 grouped strands, numbered, 2.5 m long (PCD3.K861)

## LEDs and connection terminals

6

## Control elements

- **Impulse switch:**

The switches can be used to activate the two inputs manually. The keys have the same effect as the external inputs.

A = Rest position; the module works via the inputs and via the FBox for the relevant function.

1 = Switch on manually (impulse only)

- **LEDs:**

The LEDs (red) display the state of the inputs/outputs.

I 0 + I 1 are also used to display the  $U_{ext}$  error. If  $U_{ext}$  is not connected, the two input LEDs flash together.

I (0+1): Inputs 0 + 1 +  $U_{ext}$  error  
O (0+1): Outputs 0 + 1

- **Four-pole connector:**

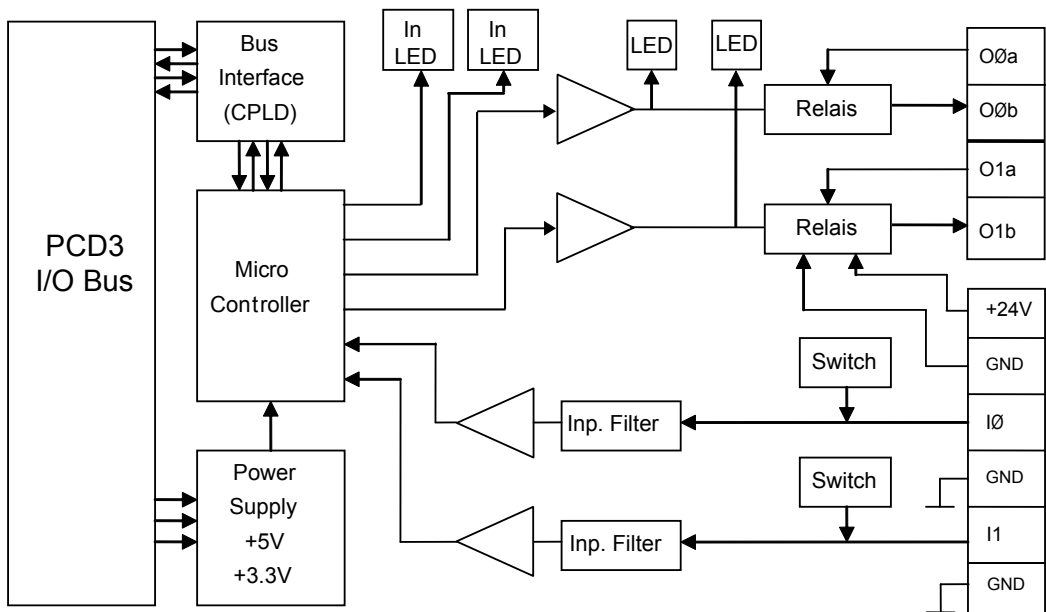

O 0 Skylight 0 / blind motor up  
O 1 Skylight 1 / blind motor down

- **Six-pole connector:**

I 0 (pin 5) – GND (pin 6) external switch for Input 0 (skylight 0 / blind motor up)  
I 1 (pin 3) – GND (pin 4) external switch for Input 1 (skylight 1 / blind motor down)  
Uext (pin 1) – GND (pin 2) external supply + 24 VDC

The GND connections are fitted to the circuit board.

Block diagram

Summary of functions

Function	Keys / inputs:	FBox
Shade module	Fully up/down	Fully up/down
	Slat movement up/down	Slat movement up/down (variable)
	-----	Stop all movements
	-----	Reset module and reinitialise
	-----	Block keys and inputs
Light module	On/off per channel (2x)	On/off per channel (2x)
	-----	Reset module and reinitialise
	-----	Block keys and inputs
Transparent module	2 digital inputs (24 VDC sink operation)	2 relay outputs

Description of functions

Shade function, general

With the shade function, the blind drive is connected in such a way that  
Relay 0 (O0 ) controls upward movement and  
Relay 1 (O1) downward movement.

The two outputs are interlocked, so both outputs cannot be activated together. For the correct operation of shade control, the only input information should be from sensors.

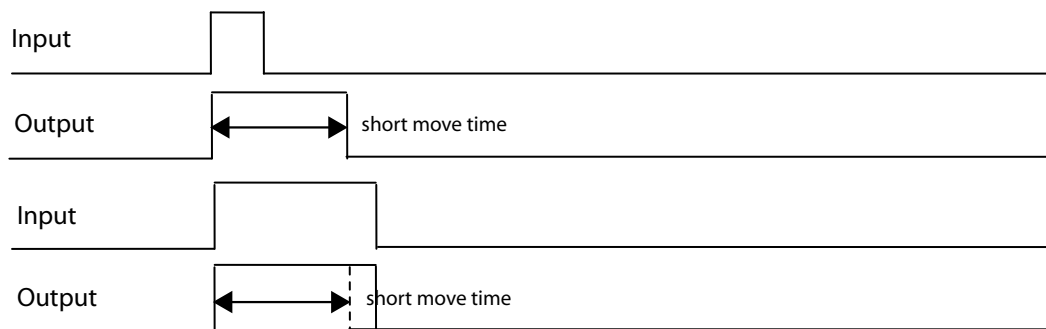

The module is set up to use blind systems with integrated limit switches. Suppressors should be fitted externally. The module can be operated by the Saia PCD® via an FBox or via the inputs (blind/light switches) on the module. The choice of function and initialisation with the various times is handled exclusively by the F-Box, and must be carried out after activation.

**Shade function, short move function**

If a key (or ext. Input 0 / Input 1) is activated briefly, the corresponding relay switches on for the "short move time". If the key/input is activated for longer than the "short move time", the output will stay on for as long as the key is pressed.

During a short move, the relay cannot be interrupted by any further input or key activation on the module.

6

**Shade function, hold function**

If a key (or Input 0 / Input 1) is activated for longer than the defined "hold time", the module will switch to hold operation. The smallest value that can be set for the hold time is 1 (1/10 second), i.e. the module will switch directly into hold mode.

In hold mode, the output (blinds up/down) stays on for the defined "move time". The module resets the output at the end of this time. The movement can be stopped by activating an input. The processing of these times may be affected by accesses by the Saia PCD®. The hold function can also be activated via the FBox.

**Stopping the movement**

If an output is switched to hold mode, this will stop as soon as a new input pulse is detected, regardless of which key (direction) is pressed.

**Special case:**

If both keys are pressed together and held down, Relay 0 will switch on and the long ("hold") movement will be executed. When the time has expired, Relay 1 will switch on immediately, and a long movement in the reverse direction will occur.

**Light function**

With the light function, a skylight is connected to each of Outputs O 0 and O 1. Activating an input / key switches the relevant output on or off. Each pulse at the input switches the output over (toggling).

Where multiple keys are provided for a skylight, they can be wired in parallel to the same output.

**Transparent function**

In transparent mode, the inputs/outputs are not interlocked. The card is used like a digital I/O card, except that it is controlled via an FBox.

**RIO operation**

The switches/keys cannot be read via "Monitorio".

**Operation in an xx7 control**

To use the module in an xx7 control requires FBs, which can be provided later on request. They do not have to be implemented in the "IO Builder".

**Restrictions (not applicable with cables, hardware version B)**

For the I/O connectors set out below, the following restrictions must be observed:

**...on the PCD3.Mxxxx CPUs:**

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

The USB cable can be plugged in, but may touch the I/O connection to the module if in Slot 0.

**...on the PCD3.Cxxx module holders:**

**No** restriction, where the PCD3.K010 connector is used to connect to other module holders (the supply connector can also be plugged in to the C200 with no problems).

If a PCD3.K106/116 cable is used to connect from the preceding module holder or to the next module holder, do **not** plug the module into Slot 0 (far left) and do **not** plug into Slot 3 (far right).

**...on PCD3.T76x head stations:**

All angled Profibus connectors with max. height 40 mm can be used, e.g.

- ERNI, angled (light grey)
- Siemens "PROFIBUSCONNECTOR" 6ES7, angled (dark grey) with optional termination resistors
- VIPA 972-0DP10, angled (metallic)

To plug in or remove the Profibus connector, remove the module. A second Profibus cable to extend the network cannot be plugged directly into the first Profibus connector. There are no problems with the RS-232 cable and the supply connector, which can be plugged in with the module in place.

If a Profibus connector with height > 40 mm is used, the module **cannot** be plugged in to Slot 0, e.g. with:

- WAGO 750-970 (height=42mm, contacts the I/O connector)

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

6

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.7.1 PCD3.B100, combined with 2 inputs + 4 digital I/Os

#### Application

Economical combined input/output module with:

- 2 inputs 24 V / 8 ms for source operation, electrically connected
- 2 transistor outputs 0.5 A / 5...32 VDC, electrically connected, not short circuit protected, and
- 4 combined inputs/outputs 24 V/8 ms or 0.5 A / 5...32 VDC on common I/O terminals.

#### Technical data on inputs

Number of inputs:	6 (2 + 4), electrically connected, source operation
Input voltage:	24 VDC smoothed or pulsed
2 inputs E0 and E1 low-range: high range:	-30...+5 V +15...+32 V
4 inputs E/A2...E/A5 low-range: high range:	-0.5...+5 V *) +15...+32 V
All 6 inputs: low-high switching threshold: high-low switching threshold: Hysteresis: input current (24 VDC): switching delay 0-1 (24 VDC): switching delay 1-0 (24 VDC):	13 V typically 6 V typically 7 V typically  7 mA typically 8 ms typically 8 ms typically
*) Negative voltage is restricted by the protective diode ( $I_{\max} = 0.5 \text{ A}$ )	

6

#### Technical data on outputs

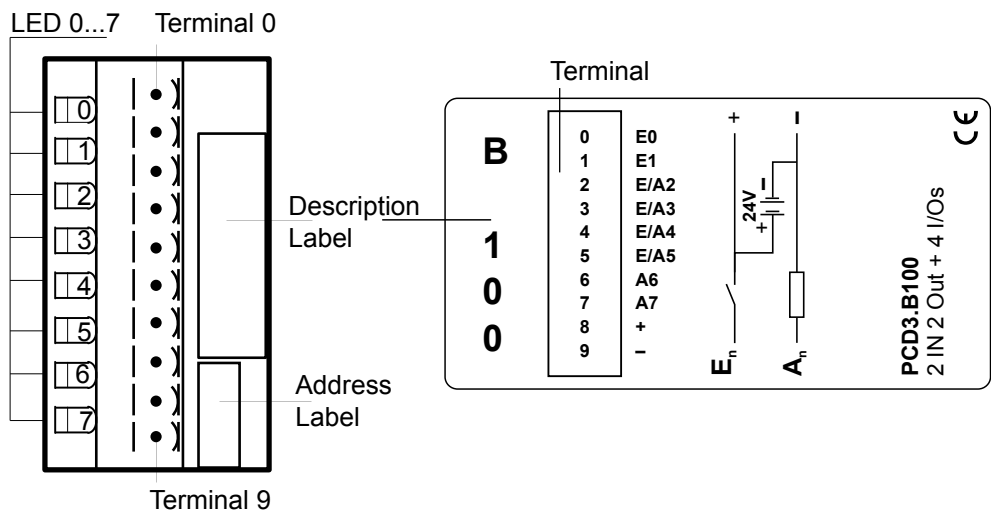

Number of outputs:	6 (2 + 4) electrically connected Source operation, not short circuit protected,
Current:	5...500 mA steady load
Voltage range:	5...32 VDC *)
Voltage drop:	< 0.3 V at 500 mA for I6 und I7 < 0.7 V at 500 mA for I/O2...I/O5
Total current per module:	3 A steady load
Switch-on delay:	10 $\mu\text{s}$ typ.
Switch-off delay:	50 $\mu\text{s}$ typ. (100 $\mu\text{s}$ max.), (ohmic load 5...500 mA), longer for inductive load because of protective diode.
*) If the state of a combined output is to be read off, voltage $U_{\text{ext}}$ must be at least 17 VDC, as the state and the LED are displayed via the input.	

General technical data on inputs and outputs

Resistance to interference: acc. to IEC 801-4	4 kV under direct coupling 2 kV under capacitive coupling (whole trunk group)
Internal current consumption: (from +5 V bus)	1...25 mA typically 15 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	Load current
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>

LEDs and connection terminals

6

The module contains 8 LEDs:

- 2 LEDs are directly triggered by the pure inputs.
- 2 LEDs are directly triggered by the pure outputs.
- 4 LEDs are triggered by the inputs of the combined inputs/outputs and therefore always indicate voltage status at the I/O terminal.

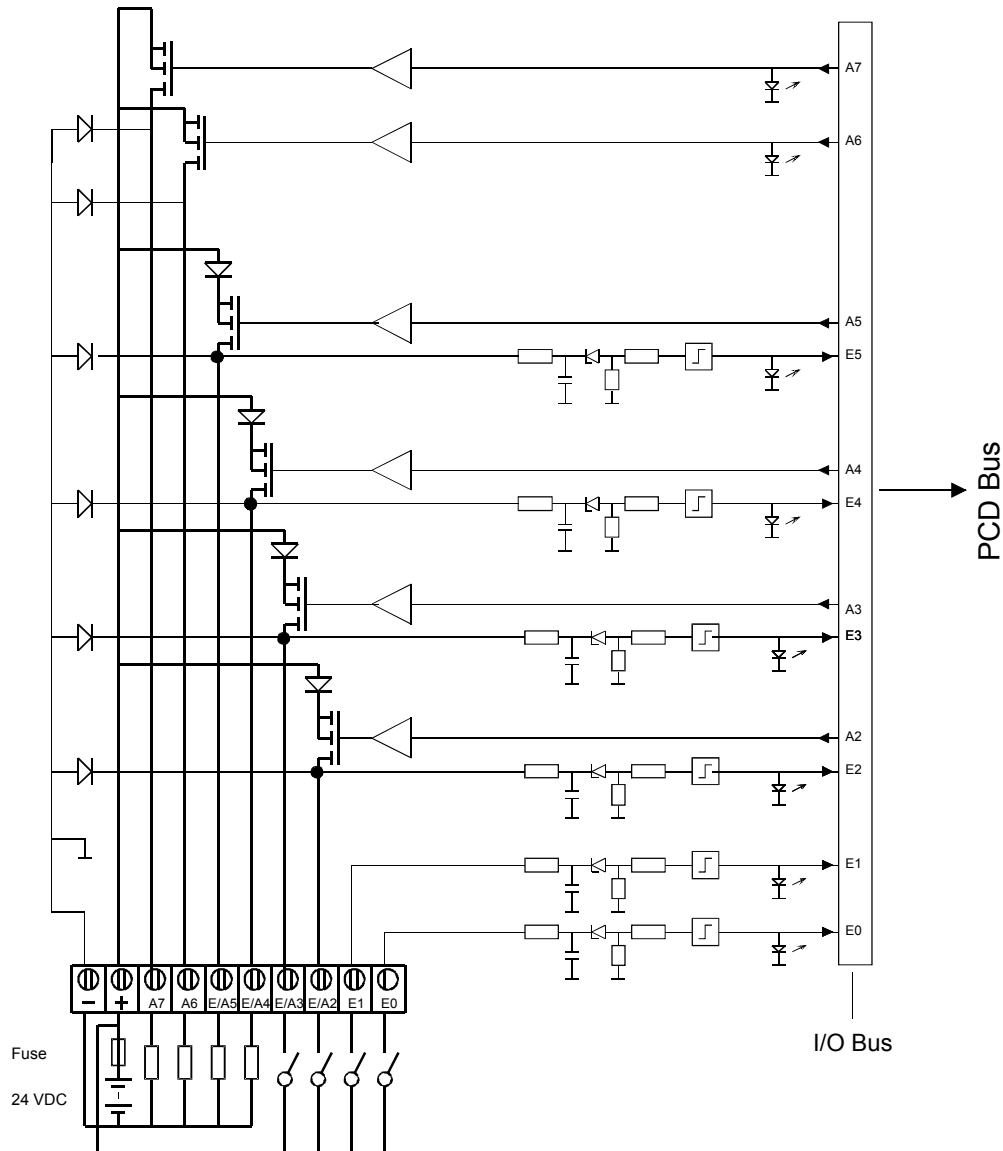

If the combined I/Os are used as outputs, the following should be noted:  
The LEDs of combined outputs E/A2...E/A5 only light up when the output is high and a supply voltage of 24 V is connected to  $U_{ext}$ .

Mixing the combined inputs/outputs

If combined I/Os are used as inputs in source operation, i.e. with sending devices which either apply +24 V to the input or are open, the low status of an open input can be overwritten as high if the corresponding output at the same address is set in error. However, if the input is shifted to 0 V with a changeover contact and the corresponding output is set in error, the MOS-FET can be destroyed, as it is not short circuit protected. For this reason, only positive-switching contacts should be used.

## Input/output circuits and terminal designation

The example shows I/O2 and I/O3 used as inputs and I/O4 and I/O5 used as outputs

The following applies for the inputs:

Switch closed (input positive): Signal state = "1" = LED on  
 Switch open: Signal state = "0" = LED off

**Fuse:** It is recommended that each module should be separately protected with a fast-blow 3.15 A fuse.

**Watchdog:** This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

## 6.8 Analogue input modules

<b>PCD3.W200</b>	<b>8 analogue inputs 10 bit, 0...10V</b>

\*) jumper selectable

6

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.8.1 PCD3.W2x0, analogue inputs, 8 channels, 10 bit resolution

#### Application

With its short conversion time of <50 µs, this module is universally suitable for recording analogue signals. The only limitations are with weak signals, as with Pt100 resistive temperature sensors, or with thermocouples.

#### Module overview

PCD3.W200	8 channels for signals 0...0.10 V
PCD3.W210	8 channels for signals 0...20 mA
PCD3.W220	8 channels for resistive temperature sensors Pt/Ni1000
PCD3.W220Z03	8 channels for NTC10 temperature sensors
PCD3.W220Z12	4 channels for signals 0...10 V 4 channels for resistive temperature sensors Pt/Ni1000

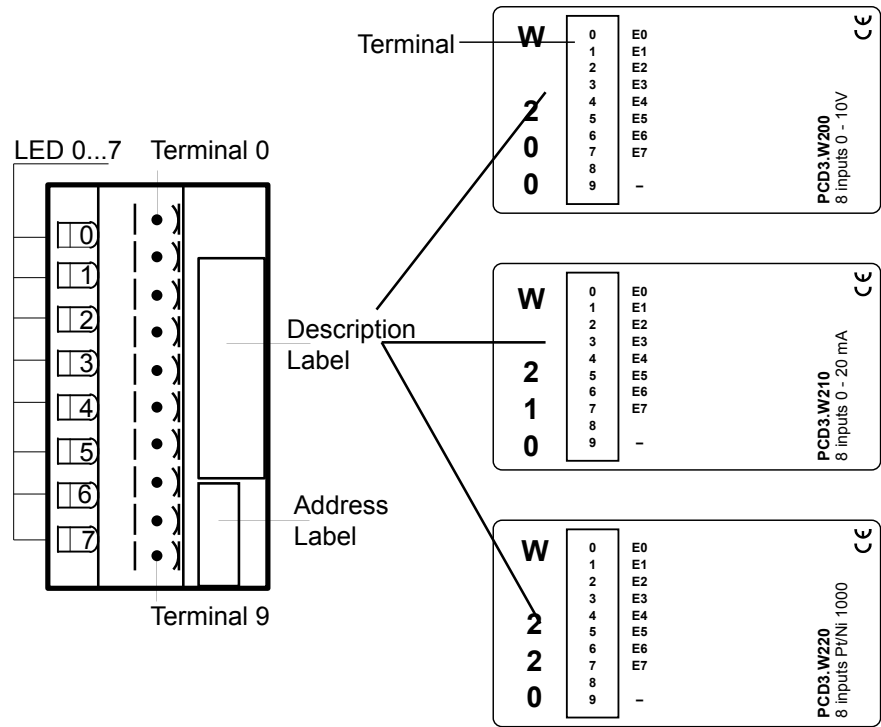

#### Technical data

Signal ranges:	see module overview	
Galvanic separation:	no	
Resolution (digital representation):	10 bits (0...1023)	
Measuring principle:	non-differential, single-ended	
Input resistance:	0...10 V: 200 kΩ / 0.15 % 0...20 mA: 125 Ω / 0.1 % Pt/Ni1000: 7.5 kΩ / 0.1 % NTC 10: 10 kΩ / 0.1 %	
Maximum measurement current for resistance measurement with W220:	1.5 mA	
Accuracy (of measured value):	± 3 LSB	
Repeating accuracy (under same conditions):	within 1 LSB	
Temperature error:	± 0.3% ( ± 3 LSB), (over temperature range from 0°...+55°C)	
Conversion time A/D:	<50 µs	
Overvoltage protection:	W200/220: ± 50 VDC	
Overcurrent protection:	W210: ± 40 mA	
Burst protection: (IEC1000-4-4)	± 1 kV, with unshielded cables ± 2 kV, with shielded cables	
Time constant of input filter:	W200: typically 5 ms W210: typically 1 ms W220: typically 10 ms	
Internal current consumption: (from +5 V bus)	8 mA (W200/210/220)	
Internal current consumption: (from V+ bus)	5 mA (W200/210) 16 mA (W220)	
External current consumption:	0 mA	
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>	

Input signals with incorrect polarity significantly distort the measurements on the other channels.

LEDs and connection terminals

## Programming

Classic

Programming examples for the PCD3.W2x0 can be found in a separate manual and on the TCS Support site [www.sbc-support.com](http://www.sbc-support.com).

xx7

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator).

!

Watchdog: This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the "[Watchdog](#)" section, which describes the correct use of the watchdog in conjunction with PCD3 components.

### Temperature measurement with Pt1000

In the temperature range – 50° to + 200°C, the following formulae can be used for working to an accuracy of ± 1 % (± 1.5°C).  
Repeating accuracy is significantly higher.

$$T[^{\circ}\text{C}] = \frac{\text{DV}}{2.08 - (0.509 \cdot 10^{-3} \cdot \text{DV})} - 261.8$$

T=temperature in °C

DV=digital value (0...1023)

Example 1: digital value DV=562  
temperature T in °C ?

$$T[^{\circ}\text{C}] = \frac{562}{2.08 - (0.509 \cdot 10^{-3} \cdot 562)} - 261.8 = \underline{51.5^{\circ}\text{C}}$$

6

---

$$\text{DV} = \frac{2.08 \cdot (261.8 + T)}{1 + (0.509 \cdot 10^{-3} \cdot (261.8 + T))}$$

DV=digital value (0...1023)

T=temperature in °C

Example 2: preset temperature T= –10°C  
corresponding digital value DV ?

$$\text{DV} = \frac{2.08 \cdot (261.8 - 10)}{1 + (0.509 \cdot 10^{-3} \cdot (261.8 - 10))} = \underline{464}$$

### Resistance measurement up to 2.5 kΩ

Special temperature sensors or any other resistances up to 2.5 kΩ can be connected to the PCD3.W220. The digital value can be calculated as follows:

$$\text{DV} = \frac{4092 \cdot R}{(7500 + R)}$$

where  $0 \leq \text{DV} \leq 1023$  and R = the resistance to be measured in Ω.

## 6.8.2 PCD3.W3x0, analogue inputs, 8 channels, 12 bit resolution

### Application

High-speed input module for general use with 8 channels, each with 12 bit resolution. Different variants for voltage 0...10V, current 0...20 mA and the use of different resistance thermometers are available.

### Module overview

### resolution \*)

PCD3.W300:	Voltage 0...10V	2,442 mV
PCD3.W310:	Current 0...0.20 mA	4,884 $\mu$ A

0 V	0 mA		0	0	0

Layout (housing open, for instructions, see section 6.1.5)

Jumper positions for selecting working mode

PCD3.W340 only; on the other module types the working modes are fixed  
All inputs set for temperature (position T) must be wired. All unused inputs (with the W340) must be adjusted to current range 'C' or voltage range 'V'.

Changing the jumpers

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix , "Icons"](#)

### Connection concept for voltage and current inputs

The voltage and current input signals are connected directly to the 10-pole terminal block (E0...E7). To minimize the amount of interference coupled into the module via the transmission lines, connection should be made according to the principle explained below.

The following connection diagram shows a typical wiring layout for:

- voltage inputs with the PCD3.W300 and ...W340 modules or
- current inputs with the PCD3.W310 and ...W340 modules

6

- The reference potentials of signal sources should be wired to a common GND connection ("-" and "COM" terminals). To obtain optimum measurement results, any connection to an earthing bar should be avoided.
- If screened cables are used, screening should be continued to an external earthing bar.

### Connection concept for temperature sensors

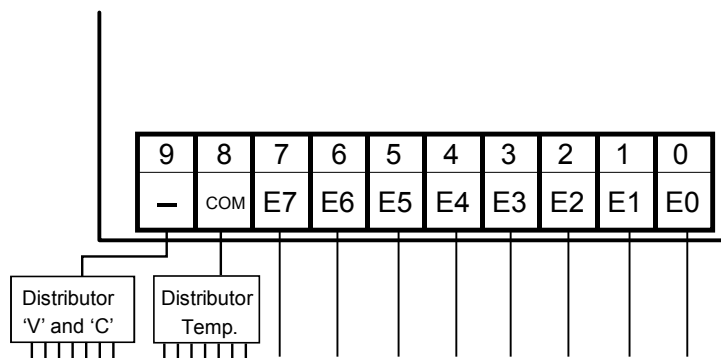

The input signals for the temperature sensors are connected directly to the 10-pole terminal block (I0 ... I7).

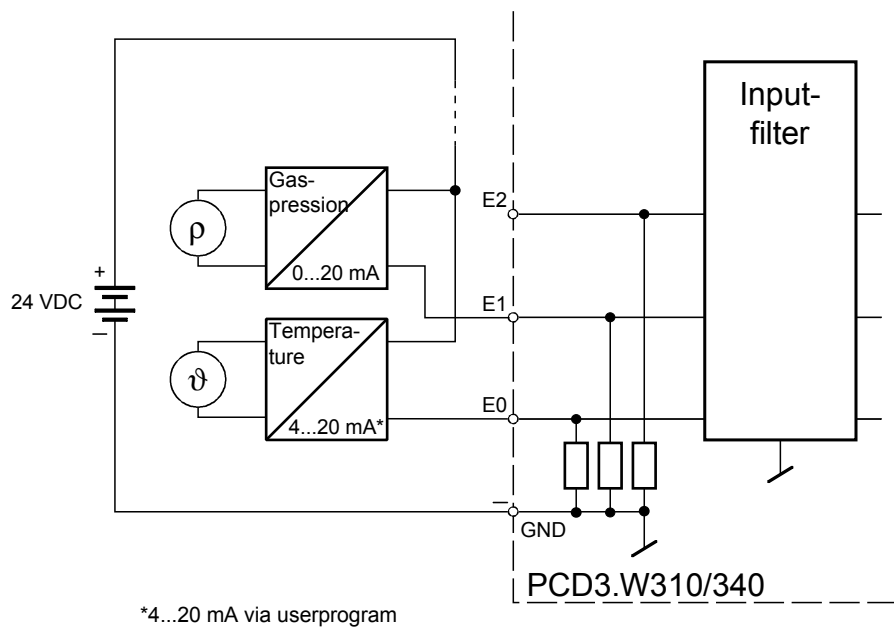

The following connection diagram shows a typical layout for temperature sensors with the PCD3.W340, ...W350 and ...W360 modules.

- The reference potential for temperature measurements is the "COM" terminal, which should not have any external earth or GND connection
- If screened cables are used, screening should be continued to an external earthing bar
- Unused temperature inputs are to be connected to the "COM"

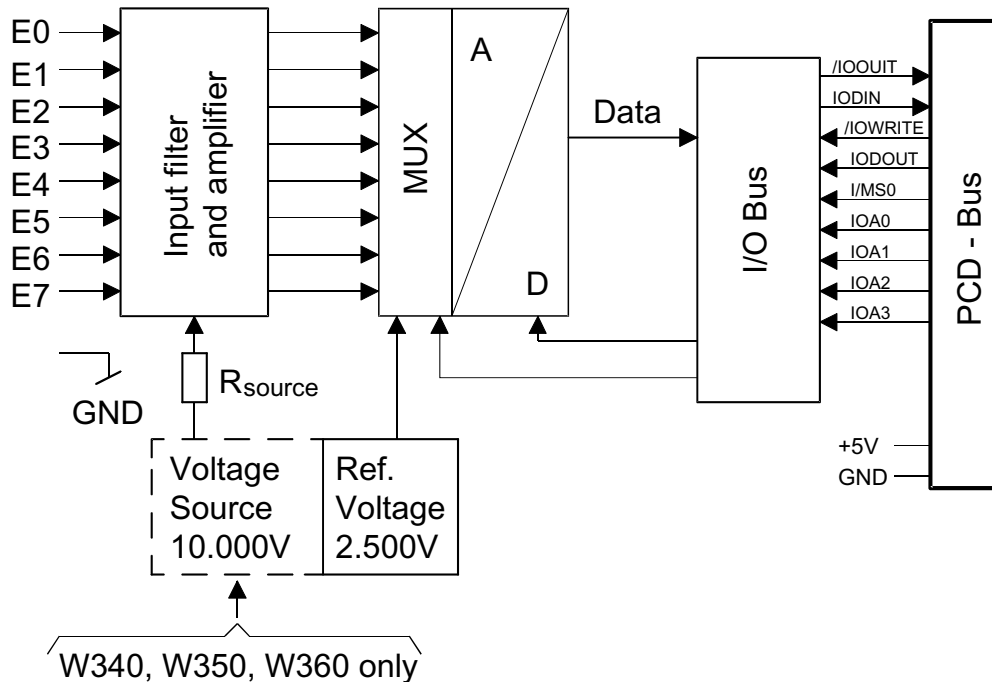

### Mixed operation

**Connection concept for two-wire transducers**

6

Two-wire transducers need a 24 VDC-supply in the measuring trunk.

**Block diagram**

6

**Programming**

Programming examples for the PCD3.W3x0 can be found in a separate manual and on the TCS Support site [www.sbc-support.com](http://www.sbc-support.com).

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator).

Watchdog: this module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

**Formulae for temperature measurement**

For Ni1000 (PCD3.W340)

Validity: Temperature range - 50...+ 210°C

Computational error:  $\pm 0.5^{\circ}\text{C}$ 

$$T = -188.5 + \frac{260 \cdot DV}{2616} - 4.676 \cdot 10^{-6} \cdot (DV - 2784)^2$$

For Pt1000 (PCD3.W340)

Validity: Temperature range - 50...+ 400°C

Computational error:  $\pm 1.5^{\circ}\text{C}$ 

$$T = -366.5 + \frac{450 \cdot DV}{2474} + 18.291 \cdot 10^{-6} \cdot (DV - 2821)^2$$

6

**Resistance measurement up to 2.5 kΩ (PCD3.W340)**

Special temperature sensors or any other resistances up to 2.5 kΩ can be connected to the PCD3.W340. The digital value can be calculated as follows:

$$DV = \frac{16380 \cdot R}{(7500 + R)}$$

where  $0 \leq DV \leq 4095$  and  $R$  = the resistance to be measured in  $\Omega$ .

For Ni 100 (PCD3.W350)

Validity: Temperature range - 50...+ 250°C

Computational error:  $\pm 1.65^{\circ}\text{C}$ 

$$T = -28.7 + \frac{300 \cdot DV}{3628} - 7.294 \cdot 10^{-6} \cdot (DV - 1850)^2$$

For Pt100 (PCD3.W350)

Validity: Temperature range - 50...+ 600°C

Computational error:  $\pm 1^{\circ}\text{C}$ 

$$T = -99.9 + \frac{650 \cdot DV}{3910} + 6.625 \cdot 10^{-6} \cdot (DV - 2114)^2$$

For Pt1000 (PCD3.W360)

Validity: Temperature range - 50...+ 150°C

Computational error:  $\pm 0.25^{\circ}\text{C}$ 

$$T = -178.1 + \frac{200 \cdot DV}{2509} + 3.873 \cdot 10^{-6} \cdot (DV - 2786)^2$$

T = temperature

DV = digital value

## 6.9 Analogue input modules, electrically isolated from the I/O Bus

PCD3.W305	7 electrically isolated analogue inputs 12 bit, 0...10 V
PCD3.W315	7 electrically isolated analogue inputs 12 bit, 0...20 mA
PCD3.W325	7 electrically isolated analogue inputs 12 bit, -10 V...+10 V

Galvanic separation of inputs to Saia PCD®, channels themselves not separated

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.9.1 PCD3.W3x5, analogue inputs electrically isolated from the I/O Bus, 7 channels, 12 Bit resolution

#### Application

High-speed input modules for general use with 7 channels, each with 12 bit resolution. Different variants for voltage 0...10 V, -10 V...+10 V and current 0...20 mA are available. Electrically isolated from the CPU.

#### Module overview

#### Changing the jumpers

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix, "Icons"](#)

#### Connection for 0...10 V

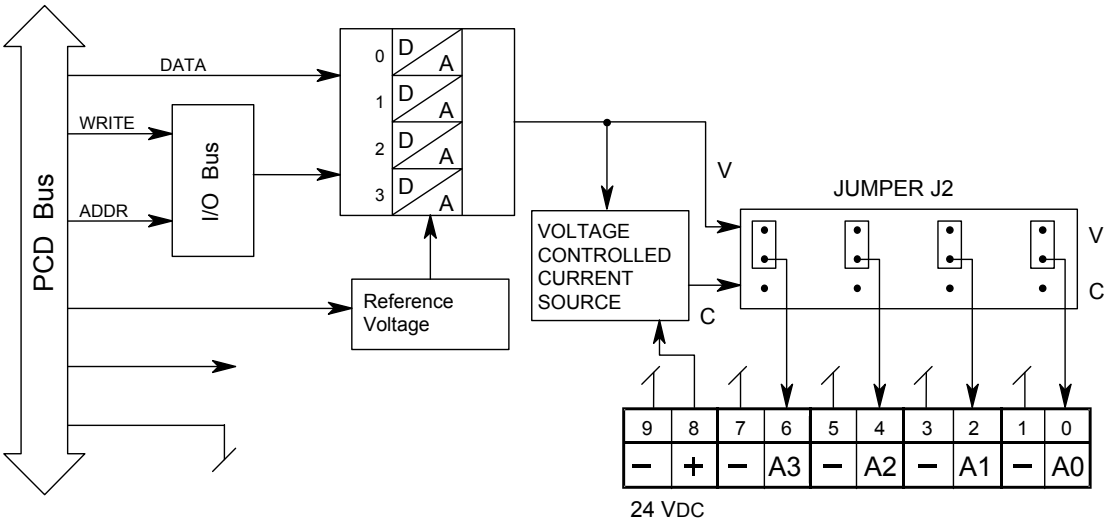

#### Connection for 0...20 mA or 4...20 mA (selectable with jumpers on type PCD3.W410)

An external 24 VDC supply is required for current outputs.

Block diagram

Programming

Programming examples for the PCD3.W4x0 can be found in a separate manual and on the TCS Support site [www.sbc-support.com](http://www.sbc-support.com).

xx7 and RIOs: the firmware reads the values according to the configuration (I/O Builder or network configurator).

Watchdog: This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.10.2 PCD3.W6x0, analogue outputs, 4 channels, 12 bit resolution

## Application

High-speed output module for general use with 4 channels, each with 12 bit resolution. Different variants for voltage 0...10V, -10...+10V and current 0...20 mA are available.

## Module overview

PCD3.W600: Unipolar voltage outputs	0...10 V
PCD3.W610: Bipolar voltage outputs	-10 V...+10 V,
switchable to unipolar voltage	0...10 V / current 0...20 mA

## Technical data

## Resolution

Number of output channels:	4, short circuit protected
Signal range:	<div> W600: 0...+10 V 2.442 mV  W610: -10 V...+10 V 4.884 mV  0...+10 V 2.442 mV  0...20 mA 4.884 <math>\mu</math>A </div> <div> } selectable  with  jumper </div>
Galvanic separation:	no
Resolution (digital representation):	12 bits (0...4095)
Conversion time D/A:	typ. 10 $\mu$ s
Load impedance	Voltage: > 3 k $\Omega$ Current: < 500 $\Omega$
Accuracy at 25°C (of output value)	Voltage: $\pm$ 0.5 % Current: $\pm$ 0.8 % *)
Temperature error:	Voltage: $\pm$ 0.1 % (over temperature range Current: $\pm$ 0.2 % 0...+55 °C)
Internal current consumption: (from +5 V bus)	W600: max. 4 mA W610: max. 110 mA
Internal current consumption: (from V+ bus)	W600: max. 20 mA W610: 0 mA
External current consumption:	max. 100 mA (type PCD3.W610 only, for current outputs)
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>

\*) Note on current outputs:

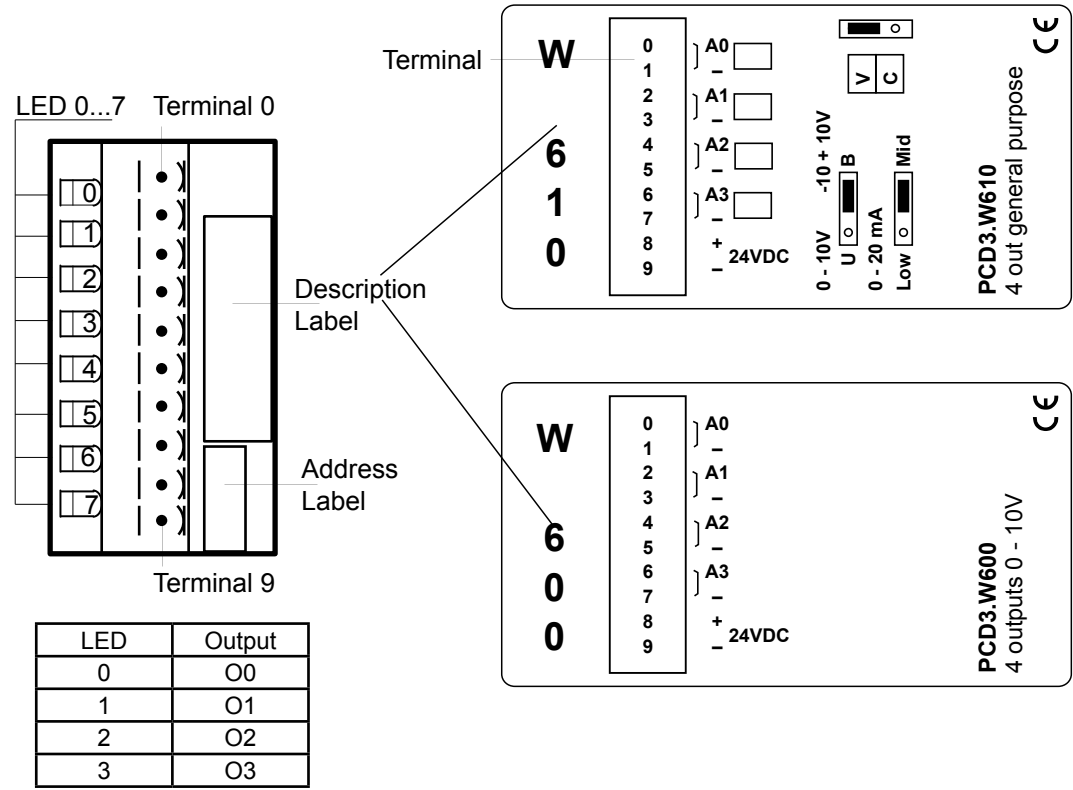

Since for some applications it is important to be able to reach the outside limit values of the range (0 mA, 20 mA), current outputs have been laid out according to the following characteristic line:

During start-up, a voltage of 5 V is sent to all outputs of the W600 module. The start-up phase lasts 40 ms, then 0 V is sent to the outputs.

LEDs and connection terminals

Digital/analogue values

Digital values			Output signals
Classic	xx7	Simatic	
4095	4095	27648	+20.1 mA
4075	4075	27513	+20 mA
2048	2048	13842	+10 mA
20	20	135	0 mA
0	0	0	0 mA

**Layout (housing open, for instructions, see section 6.1.5)****6****Changing the jumpers**

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix , "Icons"](#)

**Range selection(PCD3.W610)**

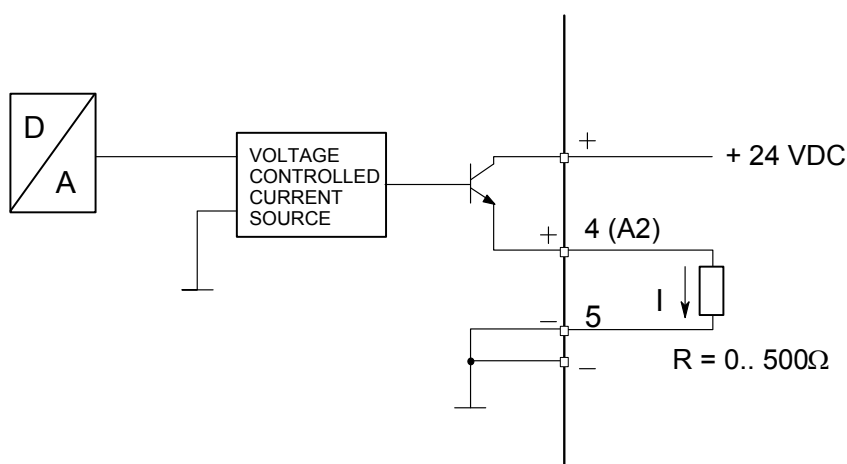

Jumpers, factory settings: O0...O3: "V" (voltage)  
 U/B: "B" (bipolar)  
 Reset select: "mid" (reset to mid-scale,  
 i.e. 0V in bipolar mode)

Ranges depending on application:

Per module: U/B:	<b>Unipolar or Bipolar operation</b>
Reset select:	Reset to <b>low-</b> or <b>mid-</b>
scale	Unipolar → low-scale
	Bipolar → mid-scale
Per channel:	"V" Voltage output:
	0...+10 V or -10 V...+10 V
	"C": Current output: 0...20 mA

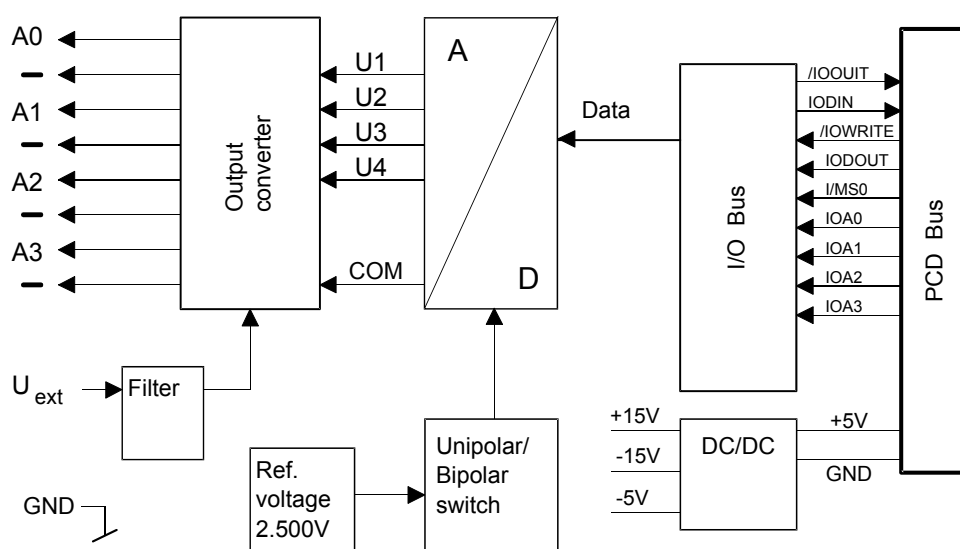

Current outputs have been laid out for unipolar mode. Bipolar mode is possible, but for the negative half of this operation the output is 0 mA.

**Connection concept****Connection for 0..0.10 V or -10 V...+10 V:** (selectable on the PCD3.W610)**Connection for 0...20 mA:** (PCD3.W610 only)

6

An external 24 VDC supply is required for current outputs.

## Connections

6

## Digital/analogue values

Output signals and type			Digital values		
PCD3.W605	PCD3.W615	PCD3.W625	Classic	xx7	Simatic
+ 10.0 V	+ 20 mA	+10 V	1023	1023	27684
+ 5.0 V	+ 10 mA	0 V	512	512	13842
	+ 4 mA		205	205	5530
0 V	0 mA	-10 V	0	0	0

## Notes on the output range

Balancing the offset and the amplification is done for the PCD2.W6x5 digitally by the  $\mu$ C. As there is no potentiometer, the output range has been slightly enlarged to cover maximum values even in the worst case.

Typical output range (without component tolerances):

W605: - 0.26 V...+ 10.36 V (instead of 0...+ 10 V)

W615: 0 mA ...21.4 mA (instead of 0...20 mA)

W625: - 10.62 V ... 10.36 V (instead of - 10...+10 V)

This range is broken down on a 10 bit scale (1024 steps), as before. The result is the following LSB resolution:

W605: 1 LSB = 10.38  $\mu$ V

W615: 1 LSB = 21.7  $\mu$ A

W625: 1 LSB = 20.75  $\mu$ V

With this balance the nominal range (0...10 V) is now scaled 0...1023, making it possible for the output value not to change on an increase of 1 LSB.

In the FBs the output values are not limited to 0...1023, so the whole range of the module can be used.

For voltages > 10 V or currents > 20 mA, values >1023 may be output, and for voltages < 0 V or

< -10 V, negative values may be output. (With the W615 it is not possible to output negative currents).

This extended range does depend on the tolerances of the components, and cannot be guaranteed.

6

### Connection concept for voltage and current inputs

The voltage and current output signals are connected directly to the 14-pole terminal block (A0 ... A5 / A3 and -).

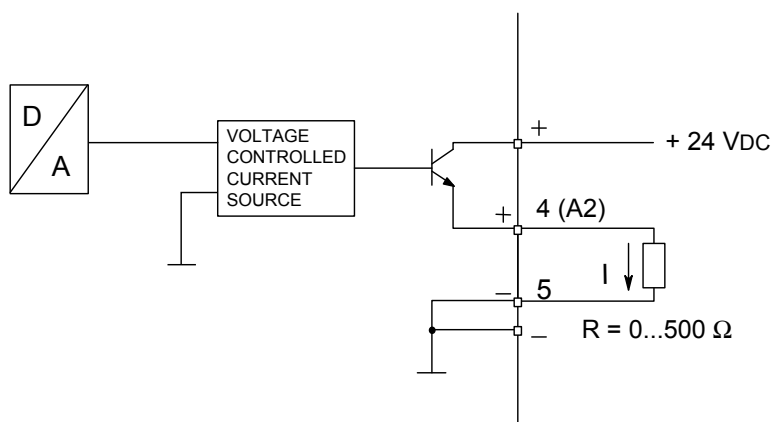

The following connection diagram shows a typical wiring layout for:

- voltage outputs with the PCD3.W605 and .W625 modules or
- current outputs for the PCD3.W615 module

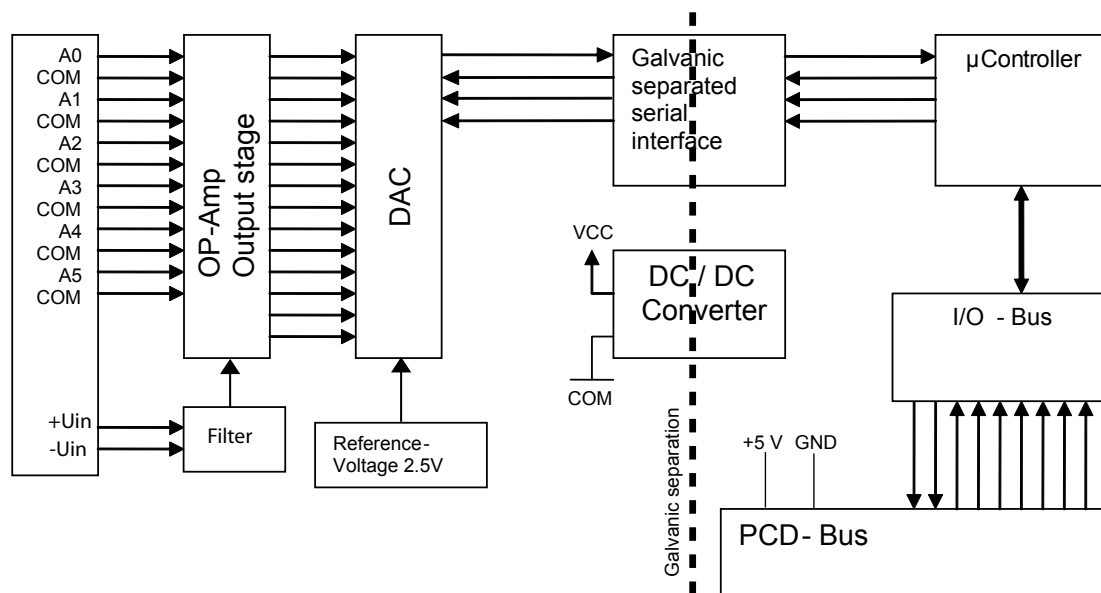

#### Connection for 0...10 V (W605) or -10 V...+10 V (W625):

#### Connection for 0...20 mA (W615)

An external 24 VDC supply is required for current outputs.

**Block diagram**

6

**Programming**

Classic

For programming the modules PCD3.W6x5, an FBox is available.

xx7

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator).

!

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

## 6.12 Analogue combined input/output modules

<b>PCD3.W500</b>	<b>2 analogue inputs 12 bit + 2 analogue outputs 12 bit, 0...10 V, -10 V...+10 V *)</b>
------------------	---

\*) jumper selectable

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.12.1 PCD3.W500, analogue inputs/outputs, 2 + 2 channels, 12 bit resolution

#### Application

Combined high speed analogue input/output module with 2 voltage inputs and 2 voltage outputs 0...+10 V (unipolar) or -10...+10 V (bipolar), jumper selectable, All with 12 bit resolution. The module is suitable for precise, high-speed applications.

#### Module overview

PCD3.W500: Module with 2 voltage inputs and 2 voltage outputs

#### Technical data

Inputs	
Number of input channels:	2
Signal ranges:	W500: 0...+10 V } jumper selectable -10...+10 V } commonly
Galvanic separation:	no
Measuring principle:	differential
Conversion time A/D:	< 30 µs
Resolution (digital representation):	12 bits (0...4095)
Input resistance:	W500: 0...+10 V: 1 MΩ
Accuracy (of measured value):	unipolar: ± 2 LSB bipolar: ± 10 LSB
Repeating accuracy (under same conditions):	± 2 LSB
Common mode range:	CMR ±10 V
Common mode rejection:	CMRR ≥ 75 dB
Overvoltage protection W500:	± 40 VCC (permanent)
Overvoltage protection W510:	45 mA
Time constant of input filter:	3 ms
Outputs	
Number of output channels:	2, short circuit protected
Signal ranges:	0...+10 V } jumper selectable -10...+10 V } individually
Galvanic separation:	no
Conversion time D/A:	< 20 µs
Resolution (digital representation):	12 bits (0...4095)
Load impedance:	≥ 3 kΩ
Accuracy (of output value):	0.3% ± 20 mV

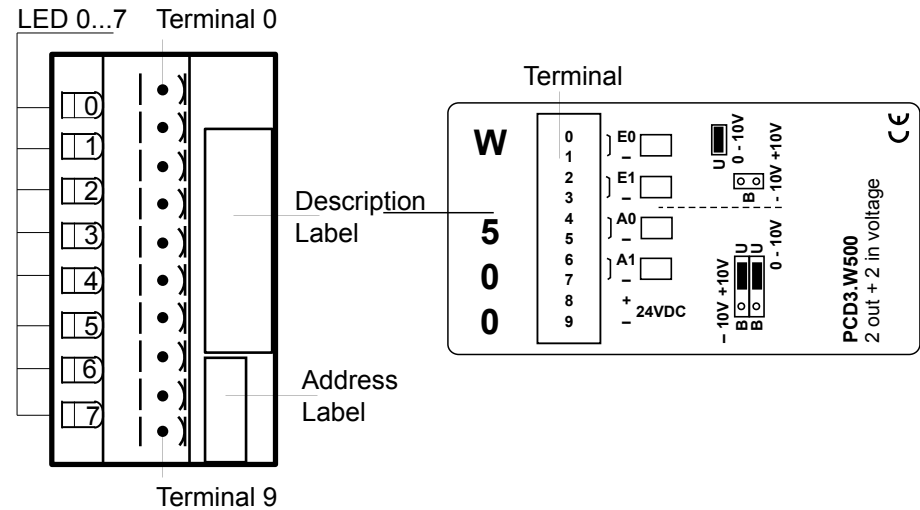

#### Technical data common to the whole module

Burst protection: (IEC 801-4)	± 1 kV, with unshielded cables ± 2 kV, with shielded cables
Temperature error	0.3% (across temperature range 0...+55 °C)
Internal current consumption: (from +5 V bus)	max. 200 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	0 mA
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm <sup>2</sup>

As the current consumption of this module is considerable, when using a number of them in the same system, the total load for all modules must be taken into consideration..

LEDs and connection terminals

6

The negative terminals “-” of outputs are connected internally to the ground, each via a 100 Ω resistor.

Analogue/digital values

Inputs

Input signals	Digital values

1023	1023	6912	+2.5 V	-5.0 V
0	0	0	0 V	-10.0 V

**Layout (housing open, for instructions, see section 6.1.5)**

6

**PCD3.W500 module, fully equipped**

(with additional module plugged on)

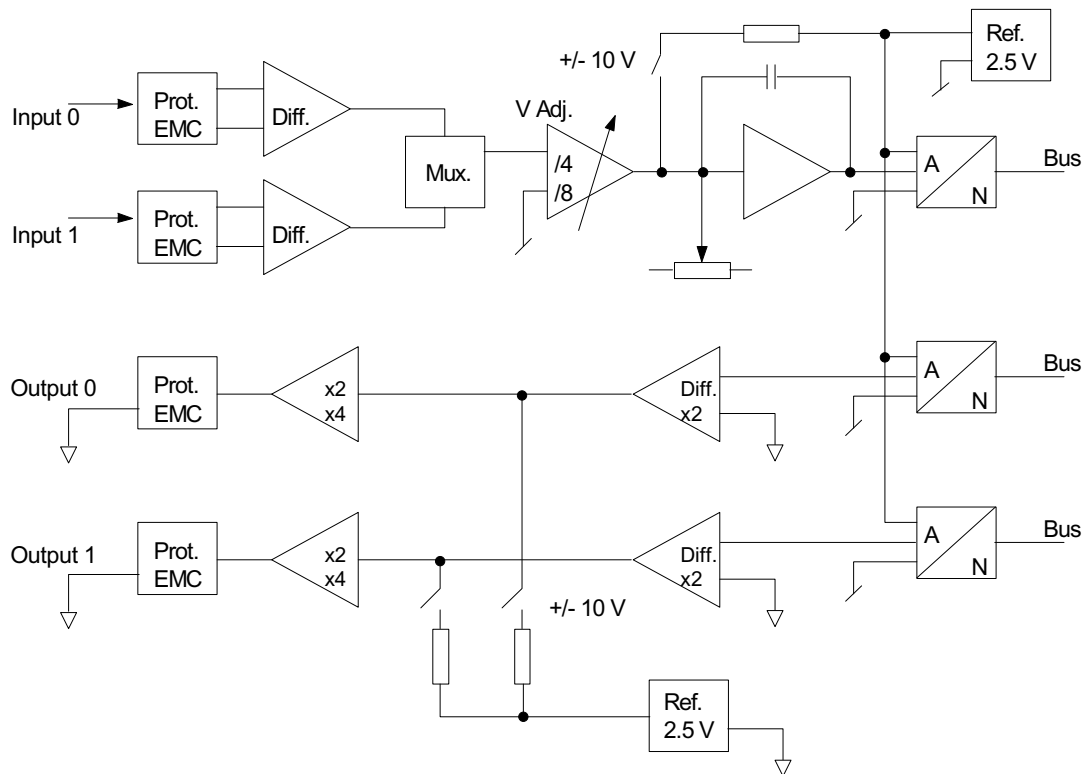

Apart from the bus connector, DC-DC converter and terminals, the base module carries the two input channels with the 2-pole jumper for unipolar or bipolar operation and a number of preset potentiometers, which cannot be adjusted by the user.

The plug-on module contains the two analogue outputs with the two 3-pole jumpers for the individual unipolar or bipolar operation of each output.

The module also works without the plug-on module.

**Changing the jumpers**

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix, "Icons"](#)

**Block diagram**

6

**Programming****Reset**

When the module or CPU powers up, both analogue outputs of the PCD3.W500 module are set at the maximum value of +10 V (or a random value between 0 and +10 V). If this should cause problems, XOB 16 (the cold-start routine) should be used to initialize both these outputs to zero or any desired cold-start value.

If the debugger is connected or the P100 handheld service device is plugged in, there is no cold-start when the CPU supply switches on. Both analogue outputs of the PCD3.W500 are then set to the maximum value of +10 V, despite the reset routine.

Programming examples for the PCD3.W500 can be found on the TCS Support site. [www.sbc-support.com](http://www.sbc-support.com).

xx7 and RIOs: the firmware reads and writes the values according to the configuration (I/O Builder or network configurator)

Watchdog: This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.13 Analogue combined input/output modules, electrically isolated

<b>PCD3.W525</b>	<b>4 inputs, 14 Bit, 0...10 V, 0(4)...20 mA, Pt1000, Pt500 or Ni1000 (selectable via DIP switch)</b>  <b>and</b>  <b>2 outputs, 12 Bit, 0...10 V or 0(4)...20 mA (selectable via software (FBox, FB))</b>
------------------	---

**6**

Galvanic separation of outputs to Saia PCD®, channels themselves not separated

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.13.1 PCD3.W525 analogue combined input/output module with electrical isolation

#### General information

The PCD3.W525 is an analogue multi-purpose module with four inputs and four outputs. Each input and output can be configured individually as an industry-standard interface of type 0...10 V, 0...20 mA und 4...20 mA. The inputs can also be configured in such a way that they can support Pt/Ni1000 or Pt500 temperature sensors. Various filter types and scaling ranges can also be used for the module.

#### Inputs, 14 Bit

- 4 inputs. Each channel has four operating modes (configurable with DIP switches)
  - **Differential voltage inputs**  
0...10 V, resolution: 0.61 mV per LSB (14 Bit)
  - **Differential current inputs** - measured in differential mode  
0...20 mA, resolution: 1.2 µA per LSB (14 Bit)  
4...20 mA, resolution: 1.2 µA per LSB (13.7 Bit)
  - **Temperature**  
Pt1000, -50...400 °C, resolution: 0.1 °C  
Pt500, -50...400 °C, resolution: 0.2 °C  
Ni1000, -60...200 °C, resolution 0.1 °C
  - **Resistance**  
0...2500 Ω, resolution 0.2 Ω
- Each channel can be configured to have a software-based filter with 50 Hz/ 60 Hz

#### Outputs, 12 Bit

- 2 outputs. Each channel has three operating modes (configurable via software)
  - **Voltage**  
0...10 V, resolution: 2.44 mV per LSB (12 Bit)
  - **Current**  
0...20 mA, resolution: 4.88 µA per LSB (12 Bit)  
4...20 mA, resolution: 4.88 µA per LSB (11.7 Bit)
- **High impedance:**

#### Miscellaneous

- All I/O channels are electrically isolated from the Saia PCD® and the external power supply. (but all channels are electrically connected to each other).
- Each channel has two connections.

Configuration

Module connections/LEDs

The module connections are as follows:

Description of LED:

- Off: No power supply to module. U<sub>ext</sub> (24 V) absent.
- On: Module working correctly.
- Flashing slowly: Channel error (overload/underload/short circuit/open load)
- Flashing quickly: U<sub>ext</sub> lower than specified (< 19 V).

Configuration of inputs

Each input channel is configured via a DIP switch with four pins. The function of each pin is as follows:

Pin no.	Off	On
1	Differential mode	Single-ended mode
2		Current shunt resistance on
3		Supply to external resistors on
4	Gain=1	Gain=0,25

According to this table, the configuration of the various operating modes is as follows:

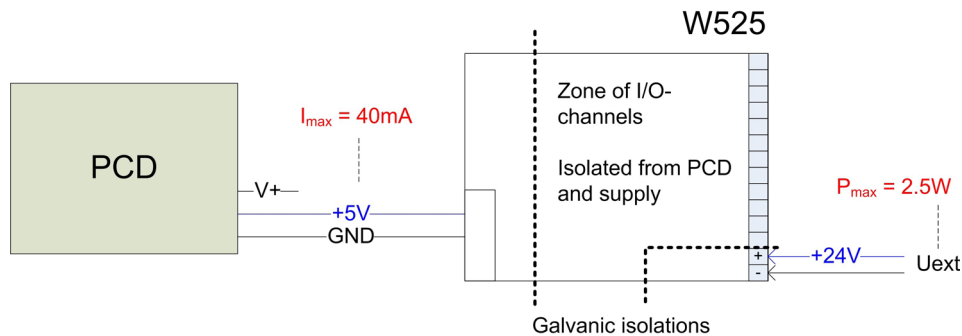

Configuration of outputs

As the outputs are configured using software (with the relevant FBox or FB), it is not necessary to configure the operating mode of the outputs using jumpers or DIP switches.

## Function

### Power supply

PCD3.W525s must have an external power supply. This power supply is electrically isolated from both the Saia PCD® and the inputs/outputs of the W525. The design also allows the use of the same power supply for the PCD and the W525 without losing the galvanic separation. The diagram below shows the various areas of separation:

6

### Timing

#### Inputs

- Internally, the W525 captures a new value for each input channel every 2 ms
- This value can be read by the Saia PCD® at any time.
- Depending on the speed of the Saia PCD®, the transmission time for each individual value scaled to 16 bit (14 bit → 16 bit) (for a single input channel) is normally 100 μs.

#### Outputs

- Internally, the W525 outputs the last output value received from the Saia PCD® with a maximum delay of 2 ms.
- Depending on the speed of the Saia PCD®, the transmission time for each individual output value scaled to 16 bit (12 bit → 16 bit) is normally 100 μs.

## Filters

### • Inputs

There are two factors used to filter the captured values:

- The basic hardware filter with a time constant of 2 ms. This filter attenuates the input signal by 6 dB per order of magnitude at a switching frequency of 80 Hz.
- The software also has an effect. This results in a delay to the captured value of 2 ms with a notch filter property at 500 Hz, where no software-based filter with 50 Hz/60 Hz has been selected.

Where a 50 Hz (60 Hz) filter is used, the frequency of the notch filter is 50 Hz (60 Hz); in this case, the delay is also 2 ms.

6

### • Outputs

Only the hardware-based filter with a time constant of 1 ms is active.

## Technical data

Inputs	
<b>General:</b>	
Resolution:	14 bit
Measurement type:	differential
Number of channels:	4
Galvanic separation of the Saia PCD®:	yes, 500 V
Galvanic separation of external supply:	yes, 500 V
Galvanic separation between channels:	no
Type of connections:	two cables per channel
Configuration of operating mode:	using DIP switches

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24?V are disconnected from the power supply.

### 6.14.1 PCD3.W800, Analogue manual control module with 4 output channels, 0...+10 V, 10 bit resolution

#### Application

The PCD3.W800 module is a rapid analogue output module with a manual control option. In Automatic mode, there are 4 analogue 0...+10 V output channels available, each with 10 bit resolution.

Three of the analogue output channels have manual control functionality. In this mode, the output voltage is preset via the potentiometer on the front panel. (for emergency and manual operation, see also section 3.20).

#### Technical data

<b>Automatic mode</b>	
Output ranges:	Voltage 0...+10 V
Channels:	4 analogue outputs O0...O3 (3 with manual operation O0...O2)
Resolution:	10 mV
Digital representation:	10 bits (0...1023)
Load resistance:	> 3 kΩ
Accuracy at 25°C:*	±0.4 %
Temperature error (0...+55°C):	± 0.25 %, 100 ppm/K or 0.01 %/K
Short circuit protection:	Yes (permanent)
Time constant of output filter:	typically 1 ms
* Tolerance value for output signals > 100 mV	
<b>Manual operation mode</b>	
Output ranges	Voltage 0...10 V
Range of settings for potentiometer	0°...280° ±5°
Output voltage at 0°	typically 0 V
Output voltage at 140°	typically 5 V
Output voltage at 280°	typically 10 V
Accuracy at end stop	±5 %
Linearity error of potentiometer	±20 %
moment of potentiometer	< 0.01 Nm
Lifetime of potentiometer	> 5000 cycles
Internal current consumption: (from +5 V bus)	typ. 35 mA / max. 45 mA
Internal current consumption: (from V+ bus)	typ. 20 mA / max. 35 mA
External current consumption:	
Connections	Pluggable 8-pole cage clamp terminal block (4 405 4934 0), for wires up to 1.5 mm², or as above with 8 grouped strands, numbered, 2.5 m long (PCD3.K800)

LEDs and connection terminals

Control elements

Channels A0...A2 each have a toggle switch with the two positions Manual and Automatic.  
There are 2 LEDs fitted per channel:  
The upper LED is two-colour and displays the operating mode for the channel:  
amber = Manual; green = Automatic  
The brightness (red) of the lower LED displays the output voltage of the channel (Manual and Automatic)

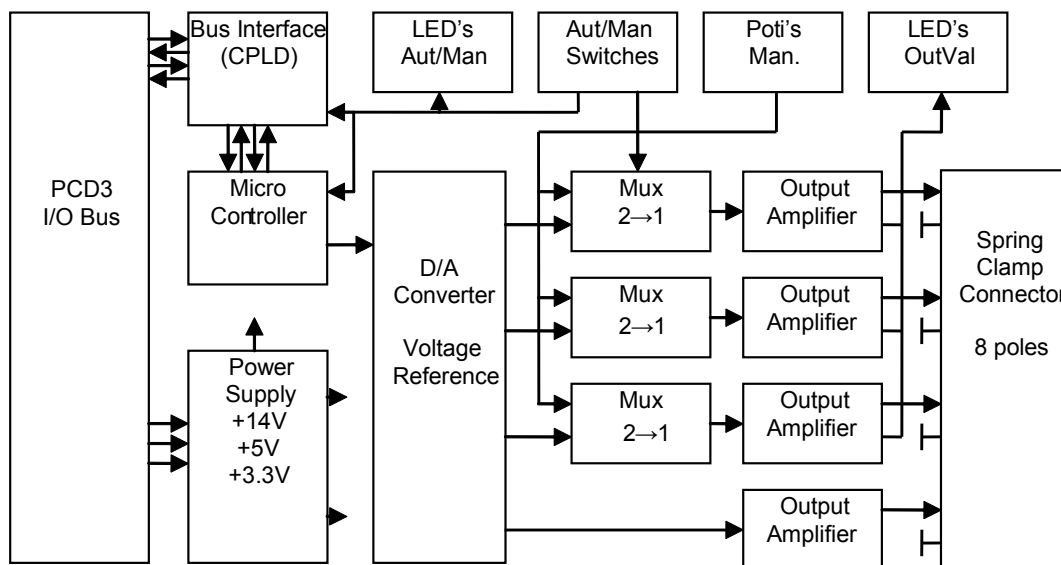

- Example (above):
- Output 0: Automatic LED 1 = green  
Value (100 %) LED 2 = red (max.)
  - Output 1: Manual LED 1 = amber  
Value (15 %) LED 2 = red (weak)
  - Output 2: Manual LED 1 = amber  
Value (85%) LED 2 = red (strong)

Digital/analogue values

Output signals	Digital values		
	Classic	xx7	Simatic
+ 10.0 V	1023	1023	27684
+ 5.0 V	511	511	13824
0 V	0	0	0

The user is able to set application-specific parameters. It is possible for example to work directly in %. For this purpose, the appropriate parameters should be set to 0...1,000 in the FBox, corresponding to 0...100% in the HeaVAC library.

**Block diagram**

6

**Programming**

For programming the modules PCD3.W800, an FBox is available.

xx7 and RIOs: the firmware reads and writes the values according to the configuration (I/O Builder or network configurator)

Watchdog: This module can be used on all base addresses; there is no interaction with the watchdog on the CPUs.

**Restrictions (not applicable with cables, hardware version B)**

For the I/O connectors set out below, the following restrictions must be observed:

***...on the PCD3.Mxxxx CPUs:***

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

The Ethernet cable can be plugged in, but (depending on the RJ-45 cable) may touch the I/O connection to the module if in Slot 0.

***...on the PCD3.Cxxx module holders:***

**No** restriction, where the PCD3.K010 connector is used to connect to other module holders (the supply connector can also be plugged in to the C200 with no problems).

If a PCD3.K106/116 cable is used to connect from the preceding module holder or to the next module holder, do **not** plug the module into Slot 0 (far left) and do **not** plug into Slot 3 (far right).

***...on PCD3.T76x head stations:***

All angled Profibus connectors with max. height 40 mm can be used, e.g.

- ERNI, angled (light grey)
- Siemens "PROFIBUSCONNECTOR" 6ES7, angled (dark grey) with optional termination resistors
- VIPA 972-0DP10, angled (metallic)

To plug in or remove the Profibus connector, remove the module. A second Profibus cable to extend the network cannot be plugged directly into the first Profibus connector. There are no problems with the RS-232 cable and the supply connector, which can be plugged in with the module in place.

If a Profibus connector with height > 40 mm is used, the module **cannot** be plugged in to Slot 0, e.g. with:

- WAGO 750-970 (height=42mm, contacts the I/O connector)

If a PCD3.K106/116 cable is used to connect to the next module holder, do **not** plug module into Slot 3 (far right).

PCD3.K106/116 cable, hardware version B, with 90° angled connector.

## 6.15 Weighing modules

<b>PCD3.W720</b>	<b>2-channel weighing module for 4/6-wire weighing cells</b>
------------------	--

<sup>1)</sup> These I/O modules cannot currently be used with the PCD3 RIO head station

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.15.1 PCD3.W720

The PCD3.W720 module is described in Manual 26/833.

## 6.16 General-purpose temperature modules

PCD3.W745	Thermocouple modules, 4-channel
-----------	---------------------------------

### Supported temperature sensors are:

- Thermocouples – TC type J,K
- Resistance thermometer (RTD) – RTD type Pt 100, Pt 1000, Ni 100, Ni1000

6

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.16.1 PCD3.W745

The PCD3.W745 module is described in Manual 26/796.

## 6.17 Counting and motion control I/O modules

<b>PCD3.H100</b>	<b>Counter module up to 20 kHz</b>
<b>PCD3.H110</b>	<b>General purpose counting and measuring module up to 100 kHz</b>
<b>PCD3.H150</b>	<b>SSI interface module</b>
<b>PCD3.H210</b>	<b>Motion control module for stepper motors <sup>1)</sup></b>
<b>PCD3.H310</b>	<b>Motion control module for servo-motors, 1-axis encoder, 24 V <sup>1)</sup></b>
<b>PCD3.H311</b>	<b>Motion control module for servo-motors, 1-axis encoder, 5 V <sup>1)</sup></b>

<sup>1)</sup> These I/O modules cannot currently be used with the PCD3 RIO head station

I/O modules and I/O terminal blocks may only be plugged in and removed when the Saia PCD® and the external +24V are disconnected from the power supply.

### 6.17.1 PCD3.H100, counting module up to 20 kHz

#### Application

Simple counting module, comprising two inputs "A" and "B" plus one direct control output marked "CCO"; allows counting of the number of revolutions or the calculation of distances (pulses) and the measurement by counting of pulses within a logical AND gate  
(second input)

Typical areas of application:

- Counting revolutions or distances (impulses)
- Presetting a count value and switching off output CCO when Counter = 0
- Measurement by counting: measuring signals counted only when particular conditions are met, e.g. photoelectric barrier covered
- Counting with recognition of count direction for incremental shaft encoders providing simple motion control

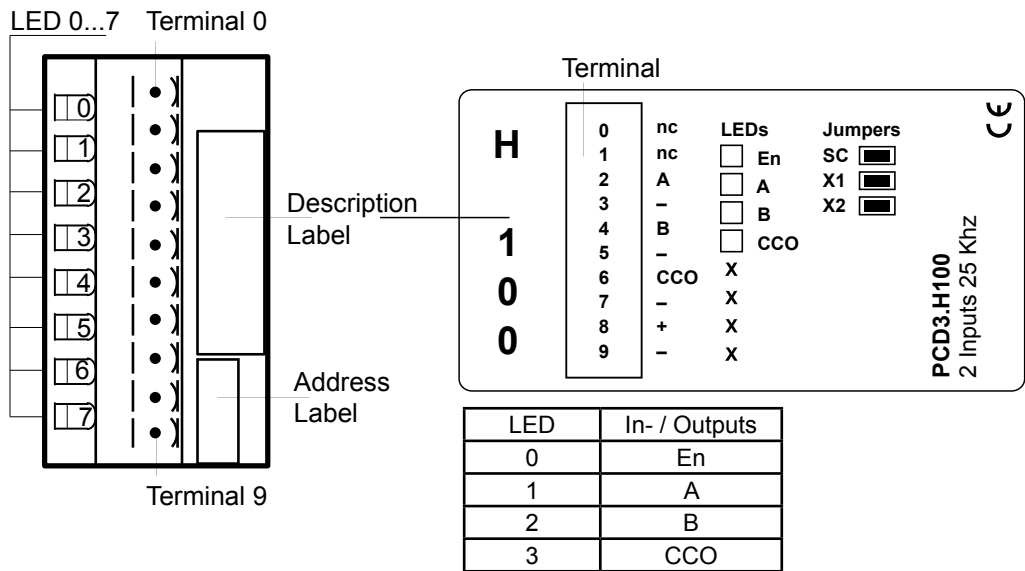

6

#### Technical data

Number of systems:	1
Counting range:	0...65,535 (16 bit) (can be extended with CPU counters)
Counting frequency:	max. 20 kHz (at pulse/pause ratio 50%)
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
"IN-A" and "IN-B" signal voltages:	Nominal voltage: 24 VDC "low" range: -30...+5 V "high" range: +15...30 V for source operation
Input current:	typically 7.5 mA
Input filter:	25 kHz
<b>Process output</b>	
Counter controlled output CCO:	counter output (switches when count is 0 or 65,535)
Current range:	5...500 mA (max. current leakage 1 mA) (min. load resistance 48 Ω in voltage range 5...24 V).
Voltage range:	5...32 V smoothed, max. 10% ripple
Circuit type:	Electrically coupled, not short circuit protected, positive switching
Voltage drop:	typically 2 V at 500 mA
Output delay:	< 10 µs, (longer for inductive load because of protective diode).
<b>Power supply</b>	
External supply	5...32 VDC, (for supply of CCO output only)
Internal current consumption: (from +5 V bus)	max. 90 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	CCO output load current
<b>Operational conditions</b>	
Ambient temperature	Operation: 0...+55°C without forced ventilation Storage: -25...+85°C
Noise immunity:	EC mark according to EN 50081-1 and EN 50082-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB). There are other FBs for use in the RIO head station.

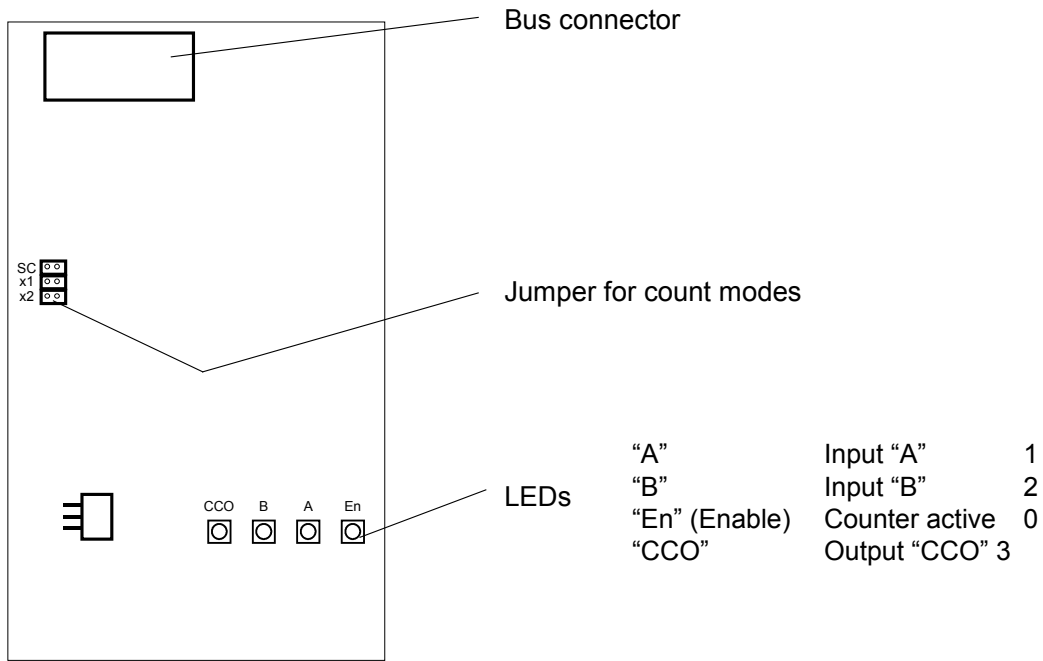

Count modes:	Selectable with jumper
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

LEDs and connection terminals

6

Layout (housing open, for instructions, see section 6.1.5)

Changing the jumpers

On this circuit board there are components that are sensitive to electrostatic discharges. For further information, refer to [Appendix, "Icons"](#)

Count modes

SC (Single Count):

**Modes x1, x2:** Up/down counting mode for 2-phase incremental shaft encoder at inputs A and B.

x1

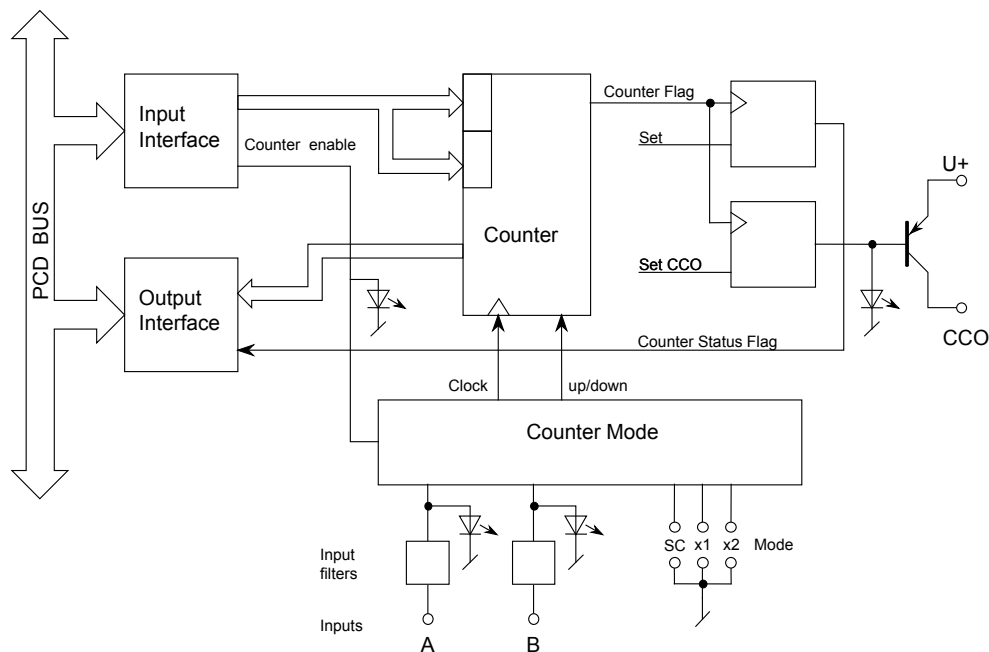

x2

## Block diagram

6

## Operating principle

This can be largely derived from the block diagram. It is only necessary to add some explanation about the counter output circuit:

The output of the internal counter is identified as “Counter Flag”. The user has no hardware access to it. This counter flag is set to “1” whenever the counter is loaded or by means of a separate instruction.

The flag is set to “0” in up-counting mode: when counter value 65,535 is reached  
in down-counting mode: when counter value 0 is reached

To reset a CCO hardware output which had previously been set high by the user program, it is necessary to differentiate between two cases:

- count range between 0...65,535 (normal case)
- count range exceeding 65,535

Case a): Resetting the counter flag results in a simultaneous reset of the CCO output.

The “Reset-Enable” should be activated **before** the counter reaches zero.

Case b): If the count range has to extend beyond the value 65,535, "Reset Enable" can be activated later, i.e. between the penultimate and the last time the counter reaches zero. This means that the CCO output is only reset after several passes of the counter. The number of passes is counted by a CPU counter.

For example, output CCO should be switched off after 200,000 count signals.

6

## Programming

Programming examples for the PCD3.H100 can be found on the TCS Support site [www.sbc-support.com](http://www.sbc-support.com).

xx7 and RIOs: the firmware reads in the values according to the configuration (I/O Builder or network configurator).

Watchdog: This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

## 6.17.2 PCD3.H110, counting module up to 100 kHz

### Application

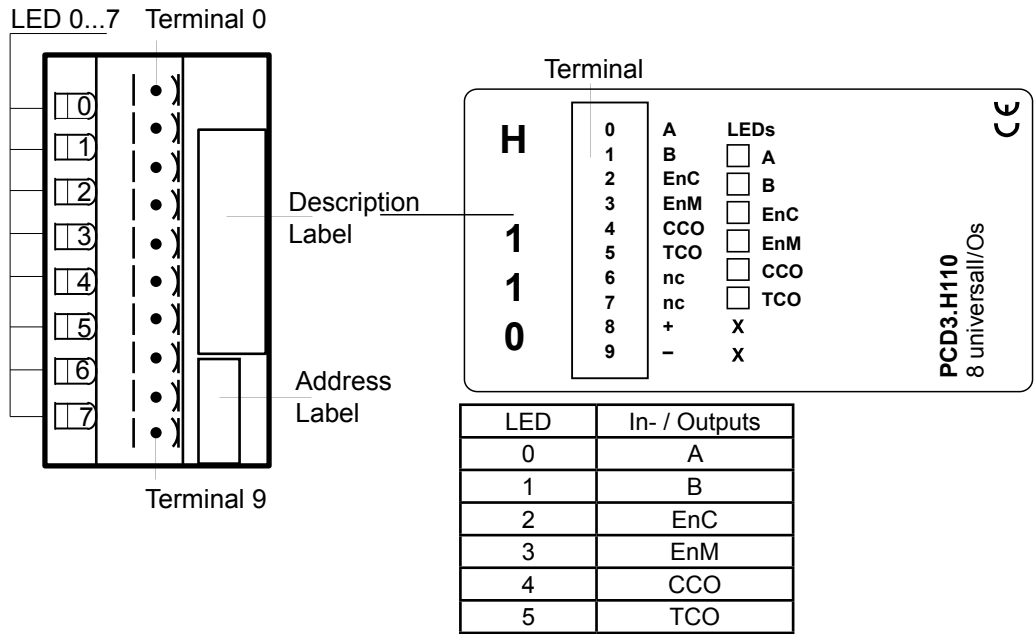

Measuring and fast counting module for general counting and simple motion control tasks; also for specific applications such as frequency measurement, period and pulse length measurement, etc. The module is equipped with an FPGA (Field Programmable Gate Array) and can be programmed for special high volume applications by using a plug-in PROM.

### Technical data

Number of systems:	1
Counting range:	0...16,777,215 (24 bit)
Counting frequency:	up to 100 kHz
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
Number of inputs:	4
Terminal 0 = I0	Input "A": for counting and measuring
Terminal 1 = I1	Input "B": for counting only
Terminal 2 = I2	Input En"C": for use as counting module
Terminal 3 = I3	Input En"M": for use as measuring module
Nominal voltage:	24 VDC "low" range: -30...+5 V "high" range: +15...30 V for source operation
Input current:	typically 6.5 mA
Input filter:	150 kHz
Circuit type:	electrically connected
<b>Digital outputs</b>	
Number:	2
Terminal 4 O0:	Output "CCO" (for counter)
Terminal 5 O1:	Output "TCO" (for measuring functions)
Current range:	5...500 mA (max. current leakage 1 mA) (min. load resistance 48 Ω in voltage range 5...24V).
Frequency:	≤ 100 kHz
Voltage range:	5...32 V smoothed, max. 10% ripple
Circuit type:	Electrically coupled, not short circuit protected, positive switching
Voltage drop:	typically < 0.5 V at 500 mA
Output delay:	< 1 μs, (longer for inductive load because of protective diode).
<b>Power supply</b>	
External supply	5...32 VDC, (for supply of CCO output only)
Internal current consumption: (from +5 V bus)	max. 90 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 2 A (all outputs)
<b>Operational conditions</b>	
Ambient temperature	Operation: 0...+55°C without forced ventilation Storage: -25...+85°C
Noise immunity:	EC mark according to EN 50081-1 and EN 50082-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB). There are other FBs for use in the RIO head station.

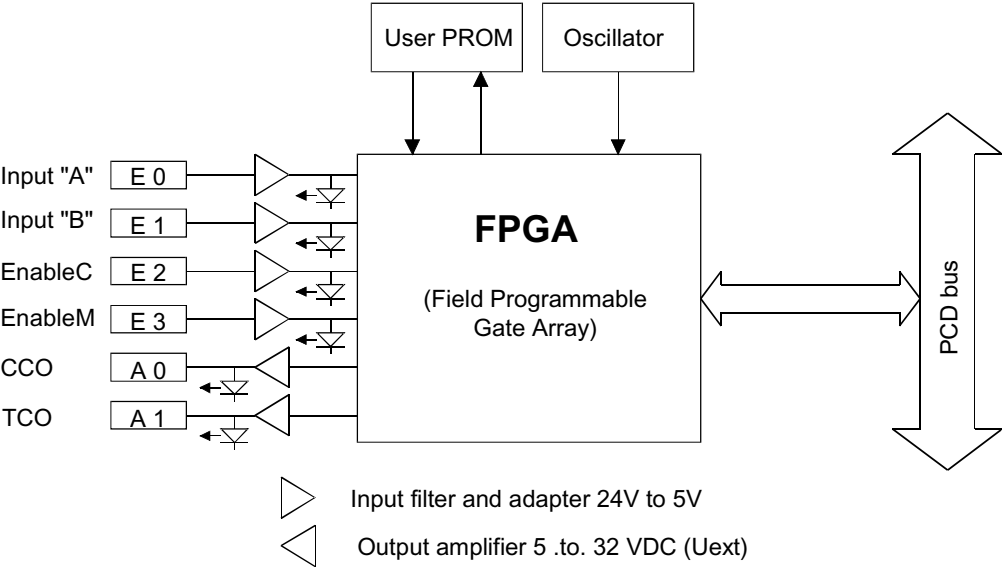

Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²
------------	---

LEDs and connection terminals

6

Block diagram

For further details, please refer to manual 26/755 "PCD2.H110 - Universal counting and measuring module".

Watchdog: This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.17.3 PCD3.H150, SSI interface module for absolute encoder

#### Application

The PCD3.H150 module is an interface module for the SSI standard. (SSI = Synchronous Serial Interface). The SSI standard is used with most absolute encoders. Details of SSI specifications can be obtained from the STEGMANN company's brochure: "SSI-Technical Information".

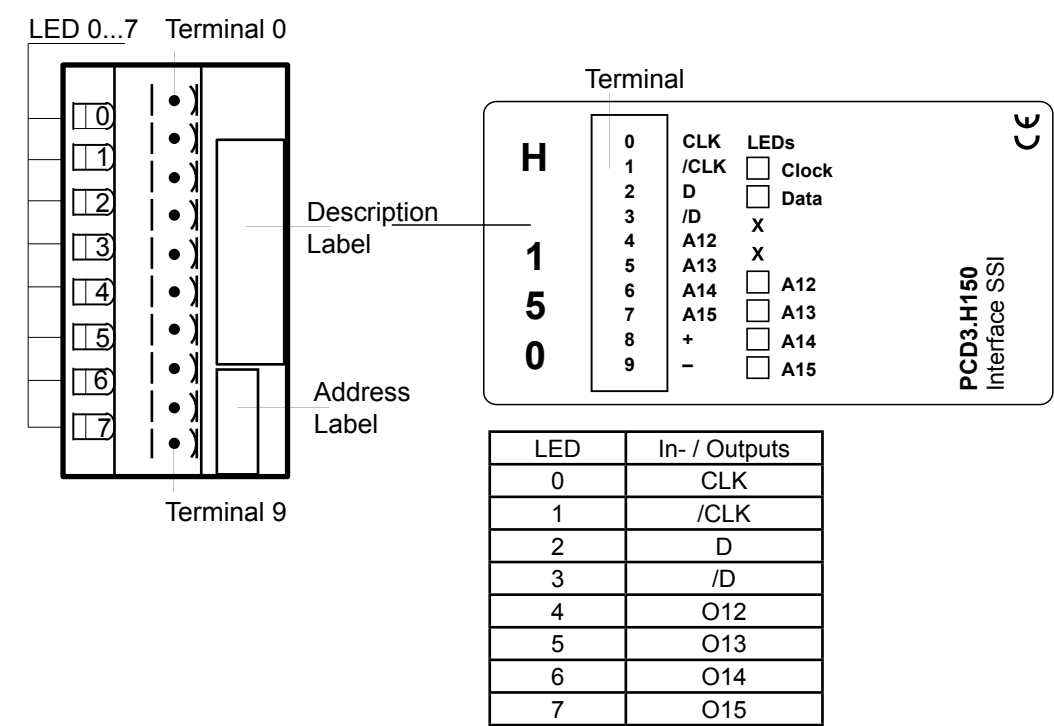

The hardware consists of an RS-422 port for the SSI interface and 4 general-purpose digital outputs. Functionality is provided by an FPGA (field programmable gate array).

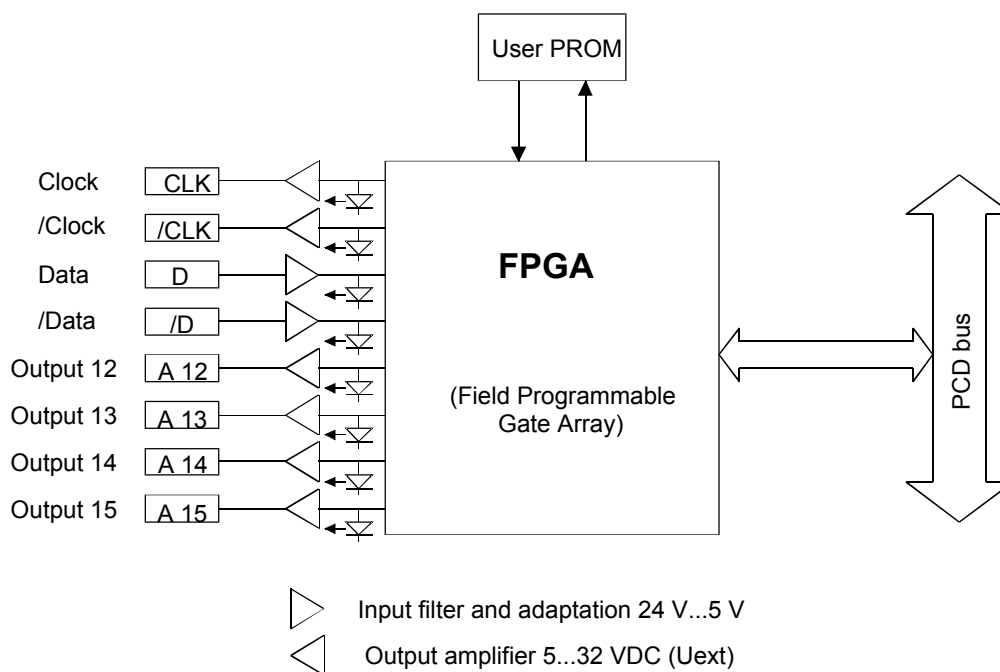

#### Technical data

Resolution:	configurable for 8...29 data bits and 0...2 control bits										
Clock frequency:	configurable for 100 kHz, 200 kHz, 300 kHz and 500 kHz (input filter designed for 500 kHz)										
Frequency has to be selected depending on cable length:	<table> <tr> <td>Cable length</td><td>Frequency</td></tr> <tr> <td>&lt; 50 m max.</td><td>500 kHz</td></tr> <tr> <td>&lt; 100 m max.</td><td>300 kHz</td></tr> <tr> <td>&lt; 200 m max.</td><td>200 kHz</td></tr> <tr> <td>&lt; 400 m max.</td><td>100 kHz</td></tr> </table>	Cable length	Frequency	< 50 m max.	500 kHz	< 100 m max.	300 kHz	< 200 m max.	200 kHz	< 400 m max.	100 kHz
Cable length	Frequency										
< 50 m max.	500 kHz										
< 100 m max.	300 kHz										
< 200 m max.	200 kHz										
< 400 m max.	100 kHz										
Data code:	configurable - Gray or binary										
Read mode:	Normal (single read). Ring mode: 'double read and compare' (not all encoders support this function)										
Offset position:	An offset can be defined when initializing the PCD3.H150. The defined offset is always subtracted in the FBs. The 'Set Zero' command also uses this offset register.										
Execution time:	typically 1.5 ms for reading the SSI value										
Cable break detection:	detected with the FB 'timeout' (10 ms)										
Flags	'fTimeout', (for cable break, encoder fault or incorrect addressing) 'fPar_Err', (if a wrong FB parameter is sent) 'fRing_err' (if compare error in 'double read')										
<b>SSI interface</b>											
1 input for SSI data	RS-422, electrically isolated										
1 output for SSI clock	RS-422, electrically connected, as the encoder input is normally isolated										
<b>Digital outputs</b>											
Number of outputs:	4										
Terminal 4 = O12:	Speed high										
Terminal 5 = O13:	Speed low										
Terminal 6 = O14:	Dir + positive direction										
Terminal 7 = O15:	Dir - negative										
Switching capacity:	0.5A each in the range 10...32 VDC, residual ripple max. 10%										
Short circuit protection:	yes, $I_{max} = 1.5 A$										
Electrical isolation:	no										
Voltage drop:	max. 0.3 V at 0.5 A										
Circuit type:	positive switching										
Output delay:	typ. 50 $\mu s$ , max. 100 $\mu s$ under ohmic load										
<b>Power supply</b>											
Internal current consumption: (from +5 V bus)	25 mA										
Internal current consumption: (from V+ bus)	0 mA										
External current consumption:	For all outputs max. 2 A, ripple max. 10 %										
<b>Operational conditions</b>											

Ambient temperature	Operation: 0...+55°C without forced ventilation Storage: -25...+85°C
Noise immunity:	EC mark according to EN 50081-1 and EN 50082-2
Programming:	Based on Saia PCD® user program and pre-programmed function blocks (FB). There are other FBs for use in the RIO head station.
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

LEDs and connection terminals

**Block diagram****6**

For further details, please refer to manual 26/761 "PCD2.H150 - SSI interface for absolute encoder".

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.17.4 PCD3.H210, Motion control module for stepper motors

#### Application

The PCD3.H210 module provides fully autonomous control and monitoring of stepper motor travel, with run-up and braking ramps. The commands for stepper motor motion cycles are transmitted to the module by function blocks in the user program.

During motion, the SM processor monitors the frequency profile and the acceleration and braking ramps to move the axis to the destination position without loss of steps. Each module controls an independent axis. The module supplies a monophasic pulse string which is conveyed to a suitable electronic drive. The module has 4 inputs and 4 outputs.

This I/O module cannot currently be used with the PCD3 RIO head station

6

#### Technical data

Number of axes:	1
Positioning distance (counting range):	0...16,777,215 (24 bit)
Frequency ranges (selectable *):	9.5...2,431 Hz 19...4,864 Hz 38...9,727 Hz 76...19,454 Hz
Acceleration *):	0.6...1224 kHz/s, non-linear range division, dependent on selected frequency range
Profile generator:	with symmetrical acceleration and braking ramps
Data protection:	All data in this module are volatile (non-volatile Saia PCD® registers are available).
<b>Digital inputs</b>	
Number of inputs: Terminal 0 = I0 Terminal 1 = I1 Terminal 2 = I2 Terminal 3 = I3	4 configurable as emergency stop or for general use configurable as limit switch LS1 or for general use configurable as reference switch or for general use configurable as limit switch LS2 or for general use
Nominal voltage:	24 VDC "low" range: -30...+5 V "high" range: +15...30 V for source operation only, for safety reasons, normally-closed contacts (negative logic) should be used
Input current:	typically 6.5 mA
Input filter:	< 1 ms
Circuit type:	electrically connected
<b>Digital outputs</b>	
Number: Terminal 4 O0: Terminal 5 O1: Terminal 6 O2: Terminal 7 O3:	4 Output "PUL" (pulses for motor) Output "DIR" (direction of motor rotation) programmable as required programmable as required
Switching capacity:	0.5 A each in the range 5...32 V, residual ripple max. 10%
Short circuit protection:	no
Electrical isolation:	no
Voltage drop:	max. 0.3 V at 500 mA

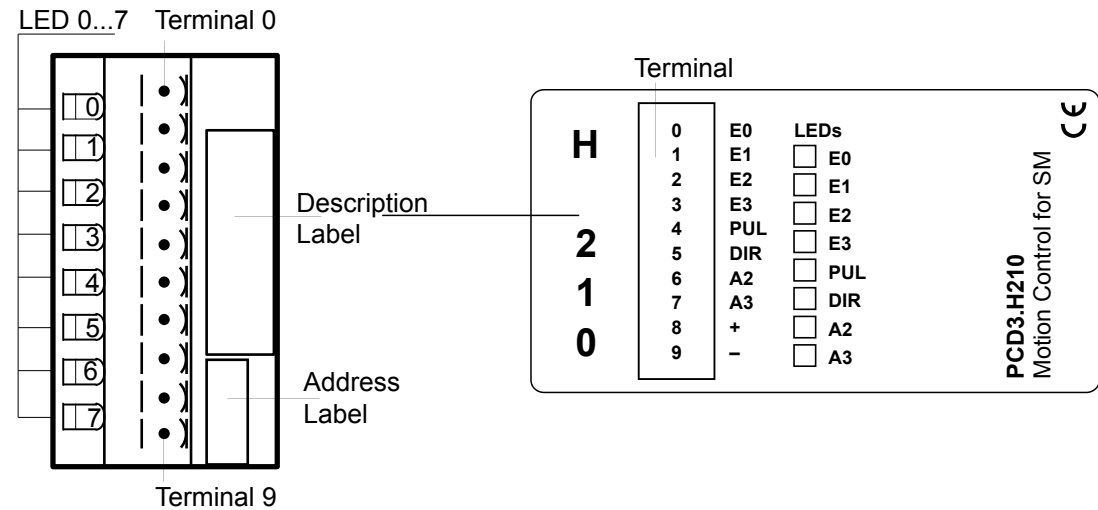

Output delay:	< 1 µs, (longer for inductive load because of protective diode).
<b>Power supply</b>	
Internal current consumption: (from +5 V bus)	85 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 2 A (all outputs), residual ripple max. 10%
<b>Operational conditions</b>	
Ambient temperature	Operation: 0...+55°C without forced ventilation Storage: -25...+85°C
Noise immunity:	EC mark according to EN 50081-1 and EN 50082-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or pluggable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used. For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

### 6.17.5 PCD3.H31x, motion control module for servo-motors, 1-axis encoder

#### Application

The PCD3.H31x motion control module is an intelligent I/O module. The module is used to position a single axis with variable speed control DC or AC servomotors. This requires the drive unit to have a power stage and incremental shaft encoder for capturing position or speed.

Each module contains a single-chip processor that independently controls every movement according to parameters supplied by the user program (velocity, acceleration and destination position). The axes are controlled independently of each other, which means that no interpolation is possible to trace curved paths. On the other hand, linking of multiple axes (point-point) in quasi-synchronous operation can be programmed.

6

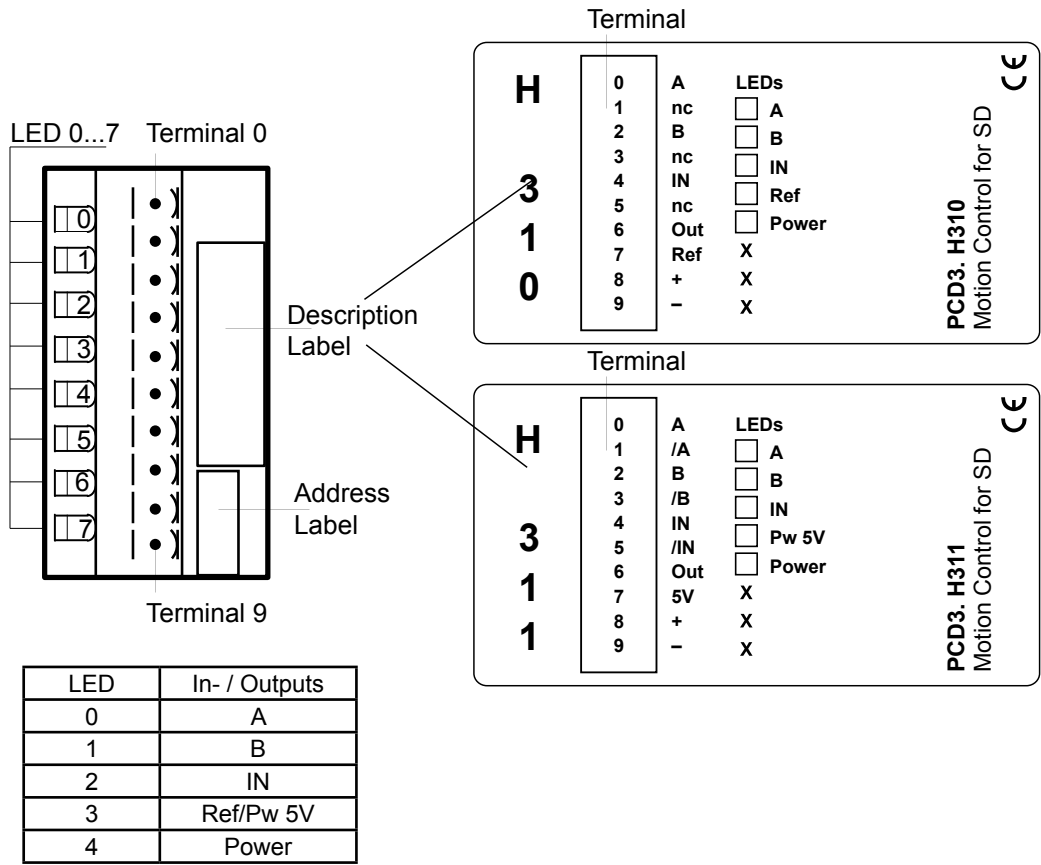

This I/O module cannot currently be used with the PCD3 RIO head station

#### Technical data

Number of axes:	1
<b>Motion parameters</b>	
31-bit registers are used for destination position, velocity and acceleration, numerical range $\pm 2^{30}$	
Position:	Resolution selectable (depending on mechanical factor)
Velocity:	Resolution selectable (depending on mechanical factor)
Acceleration:	Resolution selectable (depending on mechanical factor)
PID controller:	Sample time 341 $\mu$ s, programmable proportional, integral and differential factors. Sample time for differential part can be programmed separately.
Analogue controller output:	Velocity set point $\pm 10$ V (resolution 12 bit)
Counting frequency:	max. 50 kHz
<b>Digital inputs to PCD3.H310</b>	
Number of inputs:	1 encoder A, B, IN, 1 reference input
Nominal voltage:	24 V typically "low" range: 0...+4 V "high" range: +15...30 V for source operation only,
Input current:	typically 6 mA
Circuit type:	electrically connected
Reaction time:	30 $\mu$ s
Encoder frequency:	max. 100 kHz
<b>Digital inputs to PCD3.H311</b>	
Number of inputs:	1 encoder A, /A, B, /B, IN, /IN, (no reference input)
Input voltage:	5 V typically
Signal level:	antivalent inputs according to RS-422
Hysteresis:	max. 200 mV
Line termination resistance:	150 $\Omega$
Encoder frequency:	max. 100 kHz
<b>Analogue outputs for PCD3.H310/311</b>	
Analogue controller output:	resolution 12 bit (with sign bit)
Short circuit protection:	yes
Electrical isolation:	no
Output voltage *):	$\pm 10$ V, accuracy of adjustment $\pm 5$ mV

Circuit type:	positive switching
Minimum load impedance:	3 kΩ
*) Balancing output voltage is carried out in the factory. The user is strongly advised not to adjust the tuning potentiometer.	
<b>5 V supply for 5 V encoder for PCD3.H311</b>	
5 V output:	5 V supply of encoder
Short circuit protection:	yes
Electrical isolation:	no
Output voltage:	5 V
Max. load current:	300 mA
Short circuit current:	400 mA (this current also loads the +5 V Bus on the module)
<b>Power supply</b>	
Internal current consumption: (from +5 V bus)	max. 140 mA typically 125 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	max. 15 mA, typically 10 mA, residual ripple max. 10 %
<b>Operational conditions</b>	
Ambient temperature	Operation: 0...+55°C without forced ventilation Storage: -25...+85°C
Noise immunity:	EC mark according to EN 50081-1 and EN 50082-2
<b>Programming:</b>	Based on Saia PCD® user program and pre-programmed function blocks (FB).
Terminals:	Plug-in 10-pole spring terminal block (4 405 4954 0) or plug-gable 10-pole screw terminal block (4 405 4955 0), both for wires up to 2.5 mm²

LEDs and connection terminals

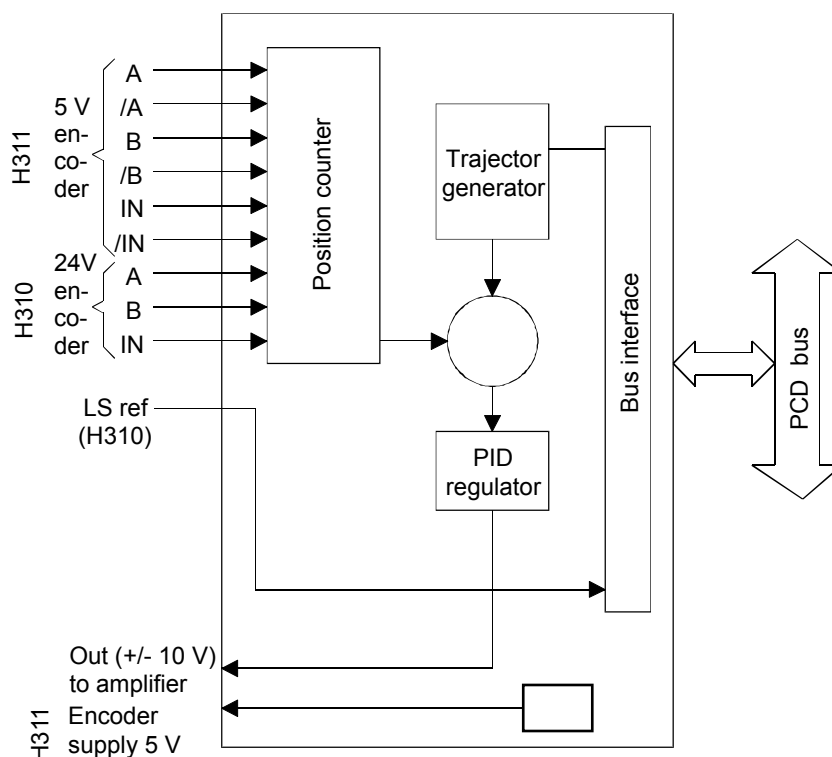

- LED "A" State of encoder input "A"
- LED "B" State of encoder input "B"
- LED "IN" State of index input
- LED "Ref" State of reference switch (H310)
- LED "Pw 5V" Supply (5V) to encoder (H311)
- LED "Power" Supply ± 15V

Terminals - PCD3.H310

- and + = external supply terminals
- Ref = digital input for the reference switch
- Out = analogue controller output
- A, B, IN = encoder signals
- nc = terminals not used

Terminals - PCD3.H311

- and + = external supply terminals
- 5V = output for 5V supply to encoder (300 mA max.)
- Out = analogue controller output
- A, B, IN = non-inverted encoder signals
- /A, /B, /IN = inverted encoder signals

**Block diagram**

6

For further information, please refer to manual 26/762, "PCD2.H31x - motion control module for stepper motors"

**Watchdog:** This module can interact with the watchdog, if it is used on base address 240. In this case, the last input with address 255 cannot be used.

For details, please refer to the ["Watchdog" section](#), which describes the correct use of the watchdog in conjunction with PCD3 components.

6.18      **Miscellaneous modules**

PCD3.S100	Workshop simulator unit
-----------	-------------------------

### 6.18.1 PCD3.S100 Workshop simulator unit

6

The PCD3.S100 workshop simulator unit **is only designed for use in workshops and training courses.**

It does not meet the requirements of general applications: it is not approved or calibrated, there are no thorough tests of the mechanical and electrical properties, and no guarantees regarding availability or repair.

#### Technical data

Digital inputs:	8 switches to simulate digital inputs, base address +0
Digital outputs:	8 LEDs to display the status of digital outputs, base address +16
Analogue inputs:	4 potentiometers (~270° rotation) to simulate analogue inputs, 10 bit resolution, base address +32 With PCD3.Mxxxx or Cxxx, use the PCD2/PCD3.W2x0 FBoxes from the standard or HeaVAC libraries
Analogue outputs:	2 LED histograms with 10 segments, to simulate analogue outputs, base address +48 With PCD3.Mxxxx or Cxxx, use the PCD2/PCD3.W400 FBoxes from the standard or HeaVAC libraries
Configuration when used with PCD3.T760 RIOs	1x PCD3.E110, 1x PCD3.A400, 1x PCD3.W200, 1x PCD3.W400
Internal current consumption: (from +5 V bus)	max. 70 mA
Internal current consumption: (from V+ bus)	0 mA
External current consumption:	--
Compatibility:	Use for workshops / training courses, mounted in <b>PCD3.Mxxxx</b> , PCD3.C100, PCD3.C200 and PCD3.T76x units
Terminals:	No connections for external wiring

## Assembly instructions

- 1) Remove or disable power supply to the Saia PCD®.
- 2) Connect the bus plate to the I/O bus. Ensure that the bus plate is firmly positioned in the I/O bus sockets, and that the grooves line up with the guides; see arrows.

6

- 3) First insert the bus plate,

then locate the front plate on the module holder.

- 4) Fix with the two screws provided.

## A Appendix

### A.1 Icons

	In manuals, this symbol refers the reader to further information in this manual or other manuals or technical information documents. As a rule there is no direct link to such documents.
	This symbol warns the reader of the risk to components from electrostatic discharges caused by touch. <b>Recommendation:</b> Before coming into contact with electrical components, you should at least touch the Minus of the system (cabinet or PGU connector). It is better to use a grounding wrist strap with its cable permanently attached to the Minus of the system.
	This sign accompanies instructions that must always be followed.
	Explanations beside this sign are valid only for the Saia PCD® Classic series.
	Explanations beside this sign are valid only for the Saia PCD® xx7 series.

## A.4 Installation direction and relays contact protection

### A.4.1 Installation direction for switching low voltages

For reasons of safety it is not allowed that low voltages (up to 50 V) and higher voltages (50...250 V) are connected to the same module.

If a Saia PCD® system module is connected to a higher voltage (50...250 V) approved components for this voltage have to be used for all elements which are galvanically connected to the system.

Using higher voltage (50...250 V), all connections to the relay contacts are to be connected on the same circuit. That means at one point in such a way that they are all protected against one AC-phase by only one fuse. Each load circuit may be protected individually by a fuse of max. 2 A.

### A.4.2 Installation direction for switching higher voltages

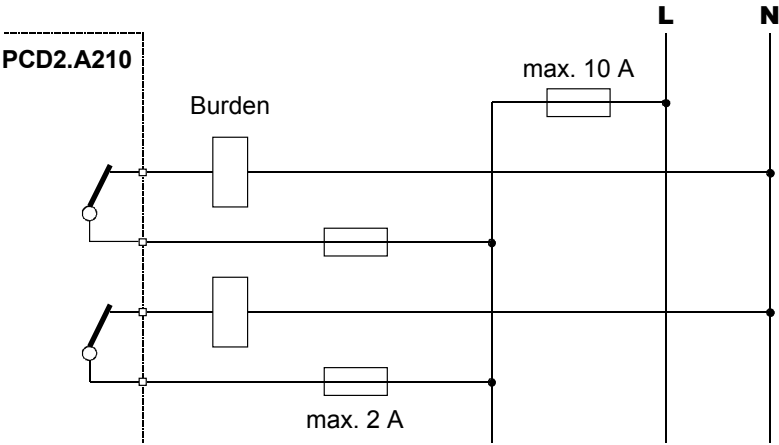

For reasons of safety it is not allowed that low voltages (up to 50 V) and higher voltages (50...250 V) are connected to the same module.

If a Saia PCD® system module is connected to a higher voltage (50...250 V) approved components for this voltage have to be used for all elements which are galvanically connected to the system.

Using higher voltage (50...250 V), all connections to the relay contacts are to be connected on the same circuit. That means at one point in such a way that they are all protected against one AC-phase by only one fuse. Each load circuit may be protected individually by a fuse of max. 2A.

### A.4.3 Switching inductive loads

Because of the physical properties of inductive loads, it is not possible to disconnect inductance without interference. This interference must be minimized as far as possible. Although the Saia PCD® is immune to this interference, there are other devices which may be susceptible.

It should be noted here that, as part of the harmonization of standards throughout the EU, EMC standards have applied since 1996 (EMC Directive 89/336/EG).

Two firm principles can therefore be stated:

- PROTECTION AGAINST INTERFERENCE FROM INDUCTIVE LOADS IS MANDATORY
- INTERFERENCE SHOULD BE ELIMINATED AS CLOSE AS POSSIBLE TO ITS SOURCE

Relay contacts on the present module have been wired. However, it is still recommended that a protection circuit should be fitted at the load.

(Often available as normal components on standardized contactors and valves).

When switching direct voltage it is urgently recommended that a recovery diode is fitted above the load. This should even take place when, theoretically, an Ohmic load is switched. In practice, there will always be a proportion which is inductive (connection cable, resistance coil, etc.). In this case it should be noted that the switch-off time will be longer.

(Approximate  $T_a \approx L/RL \cdot \sqrt{RL \cdot IL/0,7}$ ).

For direct voltage, transistor output modules are recommended.

### A.4.4 Relay manufacturer's information on RC unit dimensioning

#### Wiring contact protection:

The purpose of contact protection wiring is to suppress switch arcing ("sparks") and thereby prolong the lifetime of the contacts. All protection wiring has disadvantages as well as advantages. For the cancellation of arcing by means of an RC unit, see adjacent diagram.

When switching off load circuits with inductive components (e.g. relay coils and magnet coils) the interruption of current results in overvoltage (standard inductance) at the switching contacts. This may amount to many times the operating voltage and so threaten the insulation of the load circuit. The resultant breaking spark leads to rapid wear of the relay contacts. For this reason contact protection wiring is particularly important with inductive load circuits. Values for the RC combination can also be determined from the adjacent diagram. However, for voltage U it is necessary to use the overvoltage arising from the interruption of current (e.g. measurable with an oscillograph). Current must be calculated from this voltage and the known resistance, against which the voltage was measured.

Screening units should only use anti-interference capacitors that comply with VDE 0565 T1 class X2. These capacitors are switchproof and designed for particularly high switching surges. They can also run directly on mains voltage.

The resistors used must withstand high voltages (pulse stability). With low resistance values in particular, voltage flashovers can occur at the ground helical section produced in the manufacturing process. For this reason, composite carbon resistors are often used in screening units. However, enamelled wire resistors or cement resistors with a large helical pitch are suitable.

**Dimensioning guide:**

The value for C is the direct result of the switching current. The resistance value R can be established by drawing a straight line through the corresponding points on the I and U curves and reading off the resistance at the intersection with the R curve.

Example:

$U = 100 \text{ V}$        $I = 1 \text{ A}$

C is direct result with 0.1  $\mu\text{F}$

$R = 10 \Omega$  (point of intersection with R scale)
